## **1.0 INTRODUCTION**

Under the Superfund Technical Assessment and Response Team (START) IV Contract No. EP-S3-10-05, Technical Direction Document (TDD) No. WS03-12-09-001, the U.S. Environmental Protection Agency (EPA) Region III tasked Weston Solutions, Inc. (WESTON®) to conduct an Expanded Site Inspection (ESI) of the New Kent Wood Preservatives, Inc (New Kent) site (the Site) located in Providence Forge, New Kent County, Virginia. EPA's Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database identifies the Site with the EPA Identification No. VAD089028963.

This ESI was conducted in accordance with EPA's Guidance for Performing Site Inspections Under Comprehensive Environmental Response, Compensation, and Liability Act (Reference [Ref.] 1). The purpose of this ESI was to determine the need for additional action at the Site under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). The scope of the ESI for the New Kent site included a review of available site information, a compilation and evaluation of potential targets, sampling, and an evaluation of the analytical data.

## **2.0 SITE BACKGROUND**

This section includes a discussion of the Site location and description, a brief history of the Site, its operational history and associated waste characteristics, and information on previous investigations conducted at the Site.

### **2.1 LOCATION AND DESCRIPTION**

The New Kent site is located at 4101 South Mountcastle Road in Providence Forge, Virginia, as shown in Figure 1, Site Location Map (Ref. 2). The geographic coordinates of the New Kent site, as recorded from the former main drip pad, are 37.453708° north latitude and 77.090753° west longitude (Ref. 3). The New Kent site is located approximately 1,500 feet south of the intersection

of U.S. Route 60 East and Route 615 in a rural area of New Kent County, Virginia. As shown on Figure 1 and Figure 2, Site Layout Map, land use in the Site vicinity is a mixture of industrial, agricultural, and residential.

As shown on Figure 2, Site Layout Map, directly surrounding the New Kent site to the north is undeveloped forested land and wetlands, to the east are wetlands, to the south are active railroad tracks, and to the west is Mountcastle Road. An active tire recycling facility (Virginia Recycling Corporation) is located 0.14 mile north of the Site and an active asphalt manufacturer and recycling plant (Lee Hy Paving Corporation) is located on the south side of the railroad tracks that border the Site to the south. The nearest residential property is located approximately 0.3 mile to the southwest. The nearest surface water is an unnamed tributary to Schiminoe Creek, located approximately 300 feet to the north and east of the Site from the property fence line. The unnamed tributary flows through the wetlands that border the Site and converges with Schiminoe Creek just upstream of the railroad tracks.

## **2.2 SITE DESCRIPTION**

Currently, the Site is occupied by two active businesses: McNeil Sales and Service Co. Inc. (McNeil Sales) and Museum Resources. McNeil Sales specializes in refractory supplies and services; Museum Resources specializes in historic woodwork and forest product manufacture for museums and 18th century restorative work. Specifically, McNeil Sales casts refractory cement into shaped steel forms. The cement molds are then dried in ovens. No hazardous substances are used in the process. Museum Resources uses raw wood materials in its reproduction work and does not treat or stain its finished products (Ref. 4, pp. 13-14). As shown on Figure 2, several buildings are located on-site and are occupied by these active businesses. These buildings were previously used by the wood-treating facilities as drip pads, a process/office building, a wood-cutting building, and a maintenance shed. The former drip pads are open-aired buildings consisting of concrete slab foundations and metal roofs. The cleared area located west of the on-site buildings was the treated wood storage area prior to shipment off-site. The undeveloped, western end of the Site that borders

Mountcastle Road (Route 615) appears to have been historically outside the facility fence line and vegetated, based on previous sketch maps of the Site (Ref. 5, pp. 55, 57, and 59).

During the site reconnaissance conducted by WESTON on May 28, 2014, green staining was observed on the concrete floor in the main open-air building (former main drip pad) (Ref. 4, p. 17). The observed green staining on the concrete floor of the former drip pad is consistent with the color of chromated copper arsenate (CCA) solution (Ref. 24, p. 2). The facilities manager for McNeil Sales showed WESTON a sump that is located on the former main drip pad to collect surface water runoff when it rains. The water is pumped from the sump to the ground surface outside the northwest corner of the building (Ref. 4, pp. 13-14). The ground surface at the New Kent site is either compacted dirt roads or brush. During the site reconnaissance, two drainage ditches were observed in the back portion (east end) of the Site, originating near the dirt road, running through the brush area, past the fence, and into the wetlands on the adjacent eastern property. Standing or flowing water was not observed in these ditches during the reconnaissance; however, indication of channel flow was observed (Ref. 4, pp. 16-17). A third ditch was observed on the north side of the Site beginning alongside the building occupied by Museum Resources (former maintenance shed), extending past the fence, and into the wetlands on the adjacent northern property. Water was observed in this drainage ditch on-site and flowing into the wetlands during the site reconnaissance (Ref. 4, p. 18).

### **2.3 OPERATIONAL HISTORY AND PREVIOUS INVESTIGATIONS**

In 1977, New Kent Wood began operations at the Site, which consisted of pressure treating lumber using a pressure/vacuum system to impregnate the lumber with a CCA solution. Lumber was placed in a cylinder into which a pre-mixed solution of CCA and water was forced. Once the cylinder was filled, excess solution was vacuumed off and the treated wood was removed from the cylinder and stored on a drip pad until dry. Any CCA solution not retained by the wood was drained into a sump and recycled back into the treatment system. The main drip pad was located near the center of the Site; a secondary drip pad was located in the southeastern portion of the Site (Ref. 5,

p. 6). Once the wood was treated and dried, the wood was moved to the storage area located on the western side of the main building on-site (Ref. 5, p. 57).

In 1978, New Kent applied for and received a Discharge Certificate, IW-ND-991, in accordance with Virginia Water Control Law. In August 1983, the facility was sold and renamed Midland Timber Company (Midland) then sold again in February 1985 and renamed Holland Forest Products, Inc. (Holland); however, operations at the facility remained the same throughout the change of names and ownership (Ref. 5, p. 6).

In August 1985, the Virginia Department of Waste Management (VDWM) performed a CERCLA preliminary assessment (PA) of the New Kent site. During the PA, a representative of Holland indicated that when the facility was operated by New Kent, the surface drainage was extremely poor. The subsequent property owners, Midland, reportedly regraded the property to address this issue. Following the site reconnaissance at the facility, VDWM was contacted by an employee of Holland who alleged that in the past CCA sludge was dumped in the wooded area adjacent to the facility. In October 1985, VDWM conducted a follow-up site reconnaissance based on the alleged dumping of contaminated sludge. According to an employee interviewed by VDWM who had worked at the facility for 6 years under each ownership, no dumping of sludge had occurred to his knowledge (Ref. 6, p. 6).

In September 1985, the Virginia Water Control Board (VWCB) contacted the new owner of the facility, Holland, for information in order to transfer the Discharge Certificate from the previous property owner, Midland. On September 25, 1985, the VWCB conducted an inspection of the property. No indications of chemical spillage were observed; however, it was noted that the treated wood was only being stored on the drip pad for 24 hours instead of the required 48 hours before it was moved to the storage yard. It was also noted that the drip pad was not bermed. The VWCB requested that the facility apply for a National Pollutant Discharge Elimination System (NPDES) permit so that a determination could be made regarding whether a drainage ditch located near the drip pad contained contaminants (Ref. 5, p. 6; 6, pp. 59-60).

In 1986, Holland was classified as a small quantity Resource Conservation and Recovery Act (RCRA) generator facility for sludge removed from the treatment cylinder (EPA ID No. VAD089028963) (Ref. 5, p.7).

In May 1986, Holland developed and installed a groundwater monitoring well system to assess the groundwater quality in the area around the drip pad. Initially, a piezometer was installed at each corner of the property (a total of four) to determine the groundwater gradient. Three monitoring wells were subsequently installed downgradient of the drip pad and one was installed upgradient as a background well. The wells ranged in depth from 15 to 18 feet. Groundwater samples were collected from each monitoring well, and one surface water sample was collected from a pond identified as the “Beaver Pond” located to the east of the New Kent site. The samples were analyzed for arsenic, copper, and chromium. Analytical results indicated elevated concentrations of chromium (up to 20 milligrams per liter [mg/L]) and arsenic (up to 0.80 mg/L) in the downgradient wells relative to the concentrations detected in the background well (chromium reported at 0.08 mg/L and arsenic reported at 0.40 mg/L). The surface water sample contained 0.008 mg/L; however, chromium and copper were not detected (Ref. 6, pp. 62-68).

In September 1986, an extended development of one of the monitoring wells (M-1) that contained the highest concentration of chromium was conducted. The objective of the investigation was to determine whether the high level of chromium detected in that well in May 1986 was accurate. The well was pumped for a 24-hour period, and groundwater samples were collected every 6 hours and submitted for total chromium, total arsenic, and total copper analyses. A report dated October 10, 1986, indicates that the shallow aquifer was contaminated with chromium at a concentration of at least 16 mg/L and that the chromium concentrations did not decline over the time the aquifer was pumped. A sample collected from the sump on the drip pad revealed a total chromium concentration of 23 mg/L and a total arsenic concentration of 0.38 mg/L (Ref. 6, pp. 69-72).

In 1987, Kel-wood Timber Products (Kel-wood) purchased the property. Subsequently, in May 1988, L-Wood Forest Products (L-Wood) began leasing the property from trustees of Kel-wood (Ref. 5, p. 8).

On June 7, 1988, VWCB performed a no-discharge inspection. VWCB observed the drip pad to be open and unbermed. CCA solution was observed at the perimeter of the pad and wood fragments were noted in the drainage ditches leaving the property (Ref. 6, p. 61).

A review of EPA's RCRA Information System (RCRA Info) indicates that, in 1988, RCRA ID Number VAD981944945 was issued for L-Wood. The facility name listed on RCRA Info is L-Wood Industries Southern Pine Specialists, Inc. Chemicals listed as being used by this facility are arsenic, copper, and chromium compounds. RCRA Info for this facility is listed for the years 1988 through 1992 (Ref 5, p. 8).

In October 1988, VDWM performed a CERCLA site inspection (SI) of the property. Soil samples were collected from around the drip pad and wood storage yard, groundwater samples were collected from the on-site monitoring wells and a water supply well, and surface water and sediment samples were collected from the on-site drainage ditches and the wetlands. Analytical results indicated significant levels of chromium (up to 37,800 micrograms per liter [ $\mu\text{g/L}$ ]) in one or more of the groundwater monitoring well samples. All soil samples collected adjacent to the drip pad contained significant levels of arsenic (up to 3,950 mg/kg), copper (up to 1,390 mg/kg), and chromium (up to 2,860 mg/kg) and numerous organic polycyclic aromatic hydrocarbons (PAHs). Significant levels of arsenic (up to 922 mg/kg) and chromium (up to 699 mg/kg) were also detected in soil samples collected from the drainage ditches. Additionally, the one surface water sample collected downstream contained 7.3  $\mu\text{g/L}$  chromium (Ref. 6, pp. 12-13, 17-22, and 36).

VWCB performed an inspection of the New Kent site in September 1991. VWCB observed that the operating area was diked correctly and that treated wood was held on the drip pad for 2 days

before storage. Runoff from the pad was reportedly collected and recycled back through the treatment process (Ref. 5, p. 9).

In December 1992, a CERCLA ESI field investigation was conducted by VDWM. The previous plant manager was interviewed during the ESI investigation and stated that CCA solution was received at the facility as 50% concentrate and was stored in a 4,000-gallon above ground storage tank. This concentrate was delivered in tanker trucks that held 44,000 pounds of chemical per load. The plant manager stated that during the winter months the company used less than one truck load of solution per month; however, during the summer months, up to three loads of solution may have been used each month. The plant manager indicated that 21 drums of hazardous waste had been shipped off-site since L-Wood began leasing the property in 1988. However, because of the recycling process of the solution from the drip pad back into the treatment system, no liquid waste was generated during the lumber treatment process. It was noted during the ESI that dirt tracked onto the drip pad by a forklift was washed into the sump, collected in drums, allowed to dry, and was hauled off-site for disposal. However, it was indicated that, historically, wood chips knocked off the lumber by the forklifts were washed into the on-site drainage ditches. In response to a VWCB complaint pertaining to this issue, the facility placed gravel filters in the ditches to remove the chips, which were then placed in drums for off-site disposal. During the ESI, stained soil was observed in the drainage ditches; however, there was no evidence of wood chips (Ref 7, p. 10).

As part of the ESI, on-site soil samples were collected from waste/source areas, and surface water and sediment samples were collected from the unnamed tributary and associated wetlands. Groundwater samples were not collected during the ESI. Concentrations of arsenic (up to 400 parts per million [ppm]), chromium (up to 415 ppm), and copper (up to 305 ppm) were detected in on-site soil; and concentrations of arsenic (up to 1,230 parts per billion [ppb]) and chromium (up to 1,910 ppb) were detected in a surface water sample collected from the wetlands. The ESI concluded that, based on the analytical results, a potential existed for on-site workers to be exposed

to soils contaminated with inorganic compounds as well as the potential exposure of aquatic life to on-site contaminants (Ref. 7, pp. 11-13 and 20).

In May 1995, the Virginia Waste Management Board (VWMB), on behalf of the Virginia Department of Environmental Quality (VADEQ), issued an enforcement order to L-Wood. According to the findings outlined in the enforcement order, on June 25, 1993, VADEQ staff conducted a Compliance Evaluation Inspection at the facility. Following the inspection, VADEQ sent L-Wood a Notice of Violation letter documenting four violations. L-Wood subsequently addressed two of the violations: (1) failure to minimize the tracking of hazardous wastes off the drip pad and (2) failure to make arrangements with the Virginia Department of Emergency Services for assistance in an emergency. L-Wood, however, did not address the remaining two violations: (3) failure to obtain the requested professional engineer certification for the drip pad and (4) failure to prepare a closure plan and contingent post-closure plan for the drip pad. A schedule of compliance was prepared and included in the enforcement order, which ordered L-Wood to evaluate the drip pad within 60 days and to submit a closure plan for the drip pad to VADEQ within 90 days. L-Wood was also ordered to pay a civil penalty of \$6,400 to the Virginia Environmental Emergency Response Fund (Ref. 5, p. 10).

From April 9 through 11, 1996, the EPA Region III Site Assessment and Technical Assistance (SATA) team completed a sampling assessment of the New Kent site. Eleven soil samples, seven groundwater samples, three surface water samples, and three sediment samples were collected from the New Kent site during the assessment (Ref. 8, pp. 4-6). Concentrations of arsenic in the on-site soil samples ranged from 42.7 ppm to 1,100 ppm, concentrations of total chromium ranged from 52.3 ppm to 900 ppm, and concentrations of copper ranged from 27.7 ppm to 602 ppm (Ref. 8, p. 10). Concentrations of arsenic, total chromium, and copper were detected as high as 767 ppb, 6,840 ppb, and 892 ppb, respectively, in the shallow groundwater samples collected from the on-site piezometers (Ref. 8, p. 8). Arsenic and total chromium were detected in one of the surface water samples at 113 ppb and 19.5 ppb, respectively; and arsenic, chromium, and copper were

detected as high as 89.3 ppm, 20 ppm, and 64 ppm, respectively, in sediment samples (Ref. 8, pp. 8 and 10).

On April 25, 2000, VADEQ completed an inspection of the New Kent site. According to the inspection report, the property owner operated a trucking company on the property after closure of the wood preserving company. At the time of the inspection, the facility was deserted and a sign advertising the property for lease was posted at the entrance; thus, the condition of the on-site structures and their contents could not be determined (Ref. 5, p. 11).

VADEQ completed another inspection of the New Kent site on June 5, 2002. At the time of this inspection, the facility was occupied by Higgins Sales (currently McNeil Sales) and Museum Restorations, which was using the office space and storage facilities. The operations were reportedly “dry” and did not require permitting. The inspection report further indicates that the actions requested in the enforcement order were never completed. The inspection revealed abandoned equipment on the New Kent site, including one horizontal tank that contained a small quantity of liquid that reportedly smelled faintly of solvents/chemicals and a large vertical tank that appeared to be empty. A copy of this inspection report was sent to the address on record for the property owner, but could not be delivered. VADEQ requested that EPA take the lead on completing further assessments of the New Kent site. To date, there is no indication in the VADEQ site files that any soil remediation or closure of the drip pads has occurred (Ref. 5, p. 11).

### **3.0 SOURCE CHARACTERISTICS**

This section describes the sources associated with the Site and provides information on the source sampling locations and analytical data.

#### **3.1 SOURCE DESCRIPTION**

The source at the Site consists of an unknown quantity of contaminated soil as a result of the historical use of the property for CCA wood-treating operations. The source data presented in this section are not intended to define the entire source area(s).

### 3.2 SAMPLING LOCATIONS

In June and September 2014, as part of this ESI, WESTON collected a total of 48 surface soil (0 to 6 inches below ground surface [bgs]) samples, including duplicate and background samples, from potential source areas at the New Kent site including from areas around the former drip pad, the former storage yard, and the drainage ditches. In September 2014, three background samples were collected to document soil conditions not potentially impacted by source areas. In June 2014, three samples were collected from residential properties to document background conditions. However, these soil samples appear to be fill material and not native soil; therefore, these samples were not used to evaluate background conditions. The results of the three samples collected from residences are included in Appendix A, but are not included in the data summary table or discussed below. Sample locations are shown in Figure 3, Source Sample Location Map.

### 3.3 ANALYTICAL RESULTS

Surface soil samples collected in June 2014 were analyzed for Target Analyte List (TAL) metals through the EPA Contract Laboratory Program (CLP). Samples collected in September 2014 were analyzed for TAL metals and Target Compound List (TCL) semivolatile organic compounds (SVOCs) through the EPA CLP. The Data Validation Reports are provided as Appendix A.

The analytical results presented below include a discussion of the concentrations of “elevated” compounds or elements. “Elevated” concentrations indicate detections in soil samples at concentrations three times or greater than the concentrations detected in the background samples (NKWP-SS-17, NKWP-SS-18, and NKWP-SS-19). For the most conservative evaluation, the highest concentration detected in the three background samples is used for comparison. However, if the compound or element was not detected in the background sample, the background contract required quantitation limit (CRQL) was used as the reference value. The CRQL is the minimum level of reliable quantitation acceptable under the CLP Statement of Work for each analytical method. These compounds or elements are “elevated” if they occurred at a value greater than the background CRQL.

The soil analytical results were also compared to EPA Regional Screening Levels (RSLs) for industrial soil. EPA RSLs are generic risk-based concentrations used for Site “screening.” RSLs are intended to assist risk assessors and others in initial screening-level evaluations of environmental measurements. RSLs combine human health toxicity values with standard exposure pathway (i.e., inhalation, dermal, and ingestion) factors to estimate contaminant concentrations in environmental media (soil, air, and water) that are considered by EPA to be health-protective of human exposures, over a lifetime. RSLs are included here for comparison purposes only; they are not legally enforceable standards (Ref. 9).

As shown in Table 1, arsenic was detected at elevated concentrations in 34 of the 42 soil samples collected from potential source areas ranging from 20.3 milligrams per kilogram (mg/kg) (NKWP-SS-07) to 1,140 mg/kg (NKWP-SS-01). Additionally, 38 of the 42 soil samples collected contained concentrations of arsenic that exceed the EPA RSL of 3 mg/kg for arsenic in industrial soil. Chromium was detected at elevated concentrations in 25 of the 42 soil samples ranging from 71.6 mg/kg (NK-SS-073-062014) to 1,250 mg/kg (NKWP-SS-01). Additionally, 41 of the 42 soil samples collected contained concentrations of chromium that exceed the EPA RSL of 6.3 mg/kg for hexavalent chromium in industrial soil. Copper was detected in 22 of the 42 soil samples at elevated concentrations ranging from 69.2 mg/kg to 1,040 mg/kg. Concentrations of copper did not exceed the EPA RSL of 4,700 mg/kg for copper in industrial soil. In addition, lead was detected in 2 samples at elevated concentrations and zinc was detected in 15 samples at elevated concentrations. Concentrations of lead and zinc did not exceed applicable EPA RSLs for industrial soil.

With the exception of the detection of di-n-butylphthalate in the majority of the soil samples, including background sample NKWP-SS-19, and the detection of benzo(b)fluoranthene in two samples (NKWP-SS-02 and NKWP-SS-03), at concentrations just at or slightly exceeding the CRQL, SVOCs were not detected in the soil/source samples above the CRQL.

### **3.4 SOURCE SUMMARY**

WESTON performed surface soil sampling at the New Kent site as part of this ESI. Based on the analytical results, contaminated soil containing arsenic, chromium, copper, lead, and zinc has been documented throughout the site including in the former storage yard area, in soil surrounding the former main drip pad, and in the drainage ditches. Of these contaminants, concentrations of arsenic and chromium exceed the respective RSLs for industrial soil. Impacts to the current on-site worker populations are suspected because the majority of the ground surface is bare/unpaved.

## **4.0 GROUNDWATER MIGRATION PATHWAY**

This section describes the Site geologic and hydrogeologic setting, targets associated with the groundwater migration pathway, sampling locations, analytical data, and conclusions that can be reached for the groundwater migration pathway.

### **4.1 GEOLOGY AND HYDROGEOLOGIC SETTING**

The Site is located in the Coastal Plain physiographic province (Ref. 10). The Coastal Plain is underlain by a seaward-thickening wedge of regionally extensive, eastward-dipping strata of unconsolidated to partly consolidated sediments of Cretaceous, Tertiary, and Quaternary Age that unconformably overlie a basement of consolidated bedrock. The sediments were deposited by seaward progradation of fluvial plains and deltas along the North American continental margin, followed by a series of transgressions and regressions by the Atlantic Ocean in response to changes in sea level. A thick sequence of nonmarine strata primarily of Cretaceous Age is overlain by a much thinner sequence of marine strata of Tertiary Age, which is in turn overlain by a veneer of nearly flat-lying terrace and flood-plain deposits primarily of Quaternary Age (Ref. 11, pp. 4 and 8).

In the Coastal Plain, groundwater is present in pores between the sediment grains. Groundwater in the Coastal Plain is recharged principally by precipitation infiltration and percolation to the water table. Most of the unconfined ground water flows relatively short distances and discharges

to nearby streams; however, a small amount flows downward to recharge the deeper confined aquifers, primarily along the Fall Zone and beneath surface-drainage divides between major river valleys. Because of stratification of the Coastal Plain sediments, horizontal hydraulic conductivity generally is greater than vertical hydraulic conductivity (Ref. 11, pp. 5 and 8).

The Site is underlain by Quarternary Age river terrace deposits (Ref. 7, p. 14). On-site shallow monitoring well borings logs indicate that the river deposits are present to a depth of 13 to 14 feet bgs and are characterized by tan to brown fine sand and gray to white coarse sand (Refs. 6, pp. 63-65; 7, p. 14). Below this depth, a green glauconitic fine sand with clay is encountered, which is indicative of the Piney Point Formation (Refs. 5, p. 24; 6, pp. 63-65; 11 p. 71).

The Piney Point Aquifer is a homogeneous aquifer composed of several geologic formations that represent different periods of time; however, because all of the sediments were deposited under relatively uniform sediment-transport conditions across the Continental Shelf, they function hydraulically as a continuous medium through which water flows essentially uninterrupted at both local and regional scales. The aquifer dips generally eastward and ranges in thickness from approximately 150 feet in its northern reaches to less than 50 feet south of the James River (Ref. 11, pp. 6, 71, and 74). The Piney Point Aquifer provides public water supplies for some small towns and private supplies for low-density residential development in rural areas (Ref. 11, p. 71).

The Nanjemoy-Marlboro Confining Unit underlies the Piney Point Aquifer across most of its extent. The Nanjemoy-Marlboro Confining Unit consists primarily of marine, silty and clayey, fine-grained glauconitic quartz sands. The Nanjemoy-Marlboro Confining Unit dips generally eastward across its entire extent and has a maximum thickness of nearly 150 feet but thins to 50 feet or less south of the James River (Refs. 5, pp. 24-25; 11, pp. 6-7, and 59). The Nanjemoy-Marlboro Confining Unit is an extensive hydrogeologic unit that regionally impedes horizontal groundwater flow (Ref. 11, p. 60).

The Aquia Aquifer underlies the Nanjemoy-Marlboro Confining Unit across almost its entire extent. The Aquia Aquifer consists of marine, medium- to coarse-grained, glauconitic and fossiliferous quartz sands of the Aquia Formation of late Paleocene Age (Ref. 5, pp. 25; 11, pp. 6-7, 52, and 54). The Aquia Aquifer dips generally eastward across its entire extent and has a maximum thickness of nearly 150 feet across its upper reaches; however, it thins to generally 50 feet or less to the south and east (Ref. 11 pp. 54).

The Potomac Confining Unit underlies the Aquia Aquifer and is characterized by an uppermost clay that is interbedded with coarse-grained quartz and feldspar sands and gravels of the fluvial-deltaic Potomac Formation. The confining zone is widespread and is continuous through the 4-mile radius of the Site. The unit impedes groundwater flow into the underlying Potomac Aquifer (Ref. 11, pp. 6-7, 35-38).

The Potomac Aquifer underlies the Potomac Confining Unit and consists of 500 to 750 feet of interbedded sands and clays. The Potomac Aquifer is the largest, deepest, and most heavily used source of groundwater in the Virginia Coastal Plain. The aquifer supplies major industries, many towns and cities, and low-density residential developments in rural areas. It is a heterogeneous aquifer with sediments deposited by braided streams, meandering streams, and delta. The Potomac Aquifer is hydraulically continuous on a regional scale, but locally exhibits discontinuities where flow is impeded by fine-grained interbeds. Some studies of the Potomac Aquifer divide it into upper, middle, and lower aquifers separated by intervening confining units. The Potomac Aquifer is underlain across its entire extent by basement bedrock consisting of mainly igneous and metamorphic rock (Ref. 11, pp. 6-7; 29-32).

The shallow water table aquifer comprises the sand and gravel of the river terrace deposits that underlie the Site. Groundwater flow within the shallow water table aquifer is anticipated to be topographically controlled. Furthermore, groundwater flow measurements taken at the Site indicate groundwater flows from the northwest to the southeast towards Schiminoe Creek (Re. 6, p. 10)

### 4.3 GROUNDWATER TARGETS

There are four community wells located within a 4-mile radius of the Site. The Long Acres Mobile Home Park maintains one well located in the 0.5- to 1.0-mile radius ring that serves 48 persons. The depth of the well is unknown. A second 345-foot deep community supply well is located within the 2- to 3-mile radius ring and serves the 165 residents of the Minitree Glenn development. The Woodhaven Shores development maintains two community wells for the 1,428 residents of that development. The wells are located in the 3- to 4-mile radius ring and are 504 feet and 400 feet deep (Ref 5. p. 27). The location of the community wells within a 4-mile radius of the Site is shown on Figure 4.

A 100-foot well is located on the Site that is used for restroom and process water but is not used for drinking water. The two adjacent facilities also have wells that are used for restroom purposes but are also not used for drinking water. These wells are approximately 350 and 500 feet deep (Ref. 4, pp. 11-12). The nearest residential well to the Site is located 0.30 mile to the southwest. The remainder of the population surrounding the Site rely on private domestic wells for their potable supply. To determine the number of domestic private wells within each of the 4-mile target distance categories, a house count was completed on the 4-mile radius map (Figure 4). The number of individuals served by each well is estimated to be the average number of persons per household for the two counties (New Kent and Charles City) that are located within a 4-mile radius of the site. The average persons per household for New Kent County in 2010 was 2.70 and the average number of persons per household for Charles City in 2010 was 2.46. The private domestic wells are typically shallow and are less than 50 feet deep (Ref. 5, pp. 27-28).

The table below summarizes the total population within a 4-mile radius of the Site that relies on groundwater for their potable supply.

**ESTIMATED DRINKING WATER POPULATIONS SERVED BY GROUNDWATER  
WITHIN A 4-MILE RADIUS**

Distance Rings (miles)	Domestic Wells New Kent County	Domestic Wells Charles City County	Estimated Population Served by Domestic Wells	Public Supply Wells	Estimated Population Served by Public Wells	Total Population
≥0.0-0.25	0	0	0	0	0	0
>0.25-0.5	12	0	32	0	0	32
>0.5-1.0	41	0	111	1	48	159
>1.0-2.0	125	24	346	0	0	397
>2.0-3.0	123	103	585	1	165	750
>3.0-4.0	65	112	451	2	1,428	1,880

Ref. 5, p. 28

#### 4.4 SAMPLING LOCATIONS

As part of a concurrent Removal Assessment, a total of seven groundwater samples were collected in September 2014 to determine whether there has been a release of hazardous substances associated with New Kent sources to groundwater. Samples were collected from two of the shallow on-site monitoring wells, MW-1/5 (well depth 23 feet bgs) and MW-4 (well depth 14 bgs); the on-site potable well, DW-05 (well depth 100 feet bgs); the potable wells located on the adjacent commercial properties, DW-02 (well depth 350 feet bgs) and DW-03 (well depth 500 feet bgs); and from two nearby residential wells, DW-01 and DW-04. The well depth of the residential wells is unknown. Groundwater sample locations are shown in Figure 5, Groundwater Sample Location Map. A background groundwater sample was not collected as part of this ESI.

#### 4.5 ANALYTICAL RESULTS

Groundwater samples were analyzed for TAL metals and TCL SVOCs through the EPA CLP. The Data Validation Reports are provided as Appendix A. The groundwater analytical data results were compared to EPA National Primary Contaminant Drinking Water Regulations Maximum

Contaminant Levels (MCLs) (Ref. 12). EPA MCLs are legally enforceable standards that apply to public drinking water systems only. However, for the purpose of this ESI, they are used for comparison purposes only.

As shown in Table 2, potentially site-attributable contaminants (i.e. arsenic, chromium, copper, and lead) were not detected in samples DW-02, DW-03, DW-04, and DW-05 above the method detection limit (MDL). The MDL is the minimum concentration that can be measured and reported with 99 percent confidence that the concentration is greater than zero. Sample DW-01 contained estimated concentrations of chromium and copper at 2.1 µg/L and 15.9 µg/L, respectively. Arsenic was not detected in this well. The chromium and copper concentrations were qualified as estimated as they were detected above the MDL but below the CRQL; the minimum level of reliable quantitation acceptable under the CLP Statement of Work for each analytical method. Estimated concentrations of zinc were detected in the samples collected from all five deeper drinking water wells. However, concentrations of detected metals in the samples collected from the deeper drinking water wells did not meet or exceed applicable MCLs.

The sample collected from the shallow monitoring well located adjacent to and downgradient of the former treated wood storage yard, MW-04, contained 34.5 µg/L of chromium and 45.9 µg/L of copper. Additionally, arsenic was detected in this well at an estimated concentration of 7.9 µg/L as it was detected above the MDL but below the CRQL. Additionally, lead and zinc were detected in MW-04 at 22.8 µg/L and 158 µg/L, respectively. The sample collected from the shallow monitoring well located adjacent to the southeastern corner of the former main drip pad, MW-01/05, contained 41.3 µg/L of arsenic and 71.4 µg/L of chromium. Copper was not detected in this well. The concentrations of chromium and copper detected in the shallow monitoring wells do not exceed their applicable MCLs of 100 µg/L and 1,300 µg/L, respectively; however, the concentration of arsenic in sample MW-1/5 did exceed the MCL of 10 µg/L. Additionally, the concentration of lead detected in MW-04 exceeds the MCL of 15 µg/L.

SVOCs were not detected in either the deep or shallow wells at concentrations above the CRQL.

## 4.6 GROUNDWATER CONCLUSIONS

WESTON performed groundwater sampling as part of this ESI. Groundwater samples collected from on-site shallow monitoring wells contained concentrations of arsenic, chromium, copper, lead, and zinc; the concentration of arsenic in one of the shallow wells exceeded the MCL. These contaminants were also detected in on-site soil samples at elevated concentrations; therefore, it appears that site-attributable hazardous substances, arsenic, chromium, copper, lead, and zinc, may be impacting shallow groundwater; however, a background shallow groundwater sample was not collected. With the exception of the estimated concentrations of chromium and copper detected in sample DW0-1, the samples collected from the on-site deep well and the off-site wells did not contain concentrations of these contaminants above detection limits. The estimated concentrations of chromium and copper in DW-01 were well below applicable MCLs.

## 5.0 SURFACE WATER MIGRATION PATHWAY

This section describes the Site hydrologic setting, targets associated with the surface water migration pathway, surface water and sediment sampling locations, analytical results, and conclusions reached for the surface water migration pathway.

### 5.1 HYDROLOGIC SETTING

The Site is surrounded primarily by a mixture of undeveloped woodland and wetlands. Site elevation varies from approximately 30 feet to 50 feet above sea level [Refs. 2; 13, p. 4]. In general, runoff flows overland to the east, southeast into wetlands that are contiguous with an unnamed tributary to Schiminoe Creek. However, a drainage channel located on the north side of the property also conveys surface water runoff from the property and into the adjacent wetlands to the north. Impoundments of the stream system by the local beaver (*Castor canadensis*) population have resulted in the establishment of wetlands and impeded the flow of the unnamed tributary, creating a ponded area immediately adjacent to the northern boundary of the Site [Refs. 4, pp. 18, 19; 13, pp. 5, 12, 13]. There is minimal discernible flow or channelized stream bed in the unnamed

tributary or Schiminoe Creek in the vicinity of the Site, north of the railroad tracks that border the property to the south [Refs. 4 pp. 18, 19; 13, pp. 5, 12, 13].

As shown on Figure 7, the most upstream probable point-of-entry (PPE1) to surface water is at the northern drainage ditch that connects to the unnamed tributary. The northern drainage ditch receives surface water runoff from the northern portion of the Site, including the former wood storage area, as well as the discharge from the sump pump from the former main drip pad (Ref. 10, p. 13). The northern drainage ditch flows into the wetlands bordering the Site to the north and joins the unnamed tributary. A second PPE (PPE2) to the surface water migration pathway is into the wetlands adjacent to the eastern boundary of the property directly downgradient of the discharge point of the northernmost drainage ditch located on the eastern portion of the property. A third PPE (PPE3) to the surface water migration pathway is into the wetlands adjacent to the eastern boundary of the property directly downgradient of the discharge point of the southernmost drainage ditch located on the eastern portion of the property (Ref. 10, pp. 7 and 10]. The wetlands are contiguous to the unnamed tributary of Schiminoe Creek. From PPE3, the surface water migration pathway flows southeast through the wetlands and possibly via the unnamed tributary; however, there is not a discernible channel in this area. The pathway joins Schiminoe Creek approximately 300 feet downstream of PPE3, just north of the railroad tracks. Schiminoe Creek then flows in a southerly direction for approximately 0.75 mile until it discharges into the Chickahominy River. The 15-mile downstream target distance limit (TDL) is completed in the Chickahominy River.

## 5.2 SURFACE WATER TARGETS

Targets associated with the surface water migration pathway include drinking water targets, fisheries, and sensitive environments. As shown on Figure 6, the Newport News Waterworks maintains a drinking water intake on the Chickahominy River approximately 13.5 miles downstream from the Site. The Newport News Waterworks supplies drinking water to over 400,000 people (Ref. 4, p. 15).

Both the Schiminoe Creek and Chickahominy River are used for recreational fishing within the 15-mile TDL. The nearest identified fishing location to the Site is located on the Schiminoe Creek, approximately 0.73 mile from the Site, directly upstream of its discharge point into the Chickahominy River (Ref. 14, p. 1). The nearest access point to the Chickahominy River is at Crawford State Forest (Ref. 15, pp. 17 and 46). Fish species upstream of Walker's Dam include anadromous fish such as blueback herring and striped bass (Ref. 16, p. 1).

As depicted on Figures 6 and 7, wetlands border the Site to the north and east (Refs. 13, pp. 5, 6, 8, 15-17; 17, pp. 1-3). A wetland delineation conducted in June 2014, confirmed the wetland boundary as mapped by the National Wetland Inventory Maps (Refs. 13, pp. 5, 6, 8, 15-17; 17, pp. 1-3). There are 1,715.52 feet of wetlands associated with the unnamed tributary and Schiminoe Creek north of the railroad tracks (Ref. 17, pp. 1-3). An additional 21.2 miles of wetland frontage are located along the TDL in the Schiminoe Creek and Chickahominy River (Ref. 17, pp. 1-3).

The National Wetlands Inventory (NWI) map of the project area indicates the occurrence of palustrine forested, seasonally flooded (PF01C) and palustrine forested seasonally flooded, saturated (PF01E) wetlands surrounding the Site (USFWS, 1977). Dominant wetland plant species within the project area include the tree species of river birch (*Betula nigra*), red maple (*Acer rubrum*), black willow (*Salix nigra*), the shrub hazel alder (*Alnus serrulata*) and the herbaceous species of touch-me-not (*Impatiens* spp., likely *pallida* given the nearly closed canopy), sweetflag (*Acorus calamus*), and smallspike false nettle (*Boehmeria cylindrica*). Other wetland species include bald-cypress (*Taxodium distichum*), swamp white oak (*Quercus bicolor*), Jack-in-the-pulpit (*Arisaema triphyllum*), and beyond the forested wetland and fringing beaver dam impoundments, the broad-leaved cattail (*Typha latifolia*). Above the wetland boundary upland tree species include willow oak (*Quercus phellos*), sweetgum (*Liquidambar styraciflua*), tulip poplar (*Liriodendron tulipifera*), and American holly (*Ilex opaca*) with an understory dominated by catbriar (*Smilax* spp.). The boundary between the upland and wetland follows the topography and is well-defined with little overlap between wetland and upland species.

The New Kent County Geographic Information System (GIS) website identified the wetlands which the Site drains into as Resource Protection Areas (RPA) (Ref. 18, pp. 1-2). RPAs are areas designated under the Chesapeake Bay Preservation Act that are composed of lands at or near the shoreline that have intrinsic water quality value or are sensitive to impacts that may degrade the quality of Commonwealth water. Examples of RPAs include tidal wetlands and shores, perennial streams and associated non-tidal wetlands, and a 10-foot buffer area adjacent to and landward of the designated RPAs (Refs. 19, pp. 2-3; 20, pp. 1-2). The Chesapeake Bay Preservation Act is an enforceable program under Virginia's Coastal Zone Management Program, which was established pursuant to the federal Coastal Zone Management Act (CZMA) (Ref. 19, p. 1).

Other sensitive environments identified within the 15-mile TDL include habitat for state or federally listed threatened species. A Virginia Natural Heritage database search for New Kent County identified the presence of a state threatened species, the Bald Eagle (*Haliaeetus leucocephalus*) and several state and federally listed threatened vascular plant species within New Kent County. The small whorled pogonia (*Isotria medeoloides*), the sensitive joint vetch (*Aeschynomene virginica*), and the Bald Eagle (*Haliaeetus leucocephalus*) (all state listed threatened species under Virginia law) have been observed with the 15-mile TDL (Ref. 6, p. 34).

### 5.3 SAMPLING LOCATIONS

In September 2014, as part of this ESI, WESTON collected 15 pairs of co-located surface water and sediment samples from inundated wetland areas bordering the Site, the unnamed tributary to Schiminoe Creek, and Schiminoe Creek, including three locations upstream of source areas to document background conditions. Additionally, 13 sediment samples were collected from noninundated wetland areas bordering the Site, including a duplicate and three background locations to document conditions not potentially impacted by source areas. The surface water and sediment samples were collected to determine whether there has been a release of hazardous substances associated with on-site sources to the surface water pathway. Sediment sample locations are shown on Figure 7, Sediment Sample Location Map.

## 5.4 ANALYTICAL RESULTS

Surface water and sediment samples collected in in September 2014 were analyzed for TAL metals and TCL semivolatile organic compounds (SVOCs) through the EPA CLP. The Data Validation Reports are provided as Appendix A.

The analytical results presented below discuss the “elevated” compounds or elements that were detected in the surface water and sediment samples three times above the concentrations detected in the background samples (NKWP-SW/SD-03, NKWP-SW/SD-14, and NKWP-SW/SD-15 for the inundated wetlands, the unnamed tributary, and Schiminoe Creek, and NKWP-WS-11, NKWP-WS-12, and NKWP-WS-13 for the noninundated wetlands). For the most conservative evaluation, the highest concentration detected in the respective three background samples is used for comparison. However, if the compound or element was not detected in the background sample, the background CRQL was used as the reference value. The compounds or elements are “elevated” if they occurred at a value greater than the background CRQL.

As shown in Table 3, the surface water samples did not contain elevated concentrations of metals. Additionally, SVOCs were not detected above the CRQL.

The sediment analytical results were compared to EPA Region III Biological Technical Assistance Group (BTAG) freshwater screening benchmarks (Ref. 21). Region III BTAG screening benchmarks are media-specific ecotoxicological benchmarks that can be used in developing a screening level assessment. The EPA BTAG benchmarks are included here for comparison purposes only.

As shown in Table 4a, a total of four sediment samples that were collected from the inundated wetlands, the unnamed tributary, and Schiminoe Creek contained elevated concentrations (i.e. concentrations 3x background) of arsenic ranging from 8.2 mg/kg to 13 mg/kg, four contained elevated concentrations of chromium ranging from 12.1 mg/kg to 47.6 mg/kg, and five contained elevated concentrations of copper ranging from 4.8 mg/kg to 27.2. The EPA BTAG benchmarks

for arsenic, chromium, and copper are 9.8 mg/kg, 43.4 mg/kg, and 31.6 mg/kg, respectively. Additionally, six samples contained elevated concentrations of zinc and one sample contained an elevated concentration of manganese. The concentrations of zinc did not exceed the EPA BTAG level of 121 mg/kg; however, the elevated manganese concentration did exceed the EPA BTAG benchmark of 460 mg/kg.

As shown in Table 4b, four samples collected from the noninundated wetlands contained elevated concentrations (i.e. concentrations 3x background) of arsenic ranging from 59.2 mg/kg to 504 mg/kg, three contained elevated concentrations of chromium ranging from 122 mg/kg to 764 mg/kg, and one contained an elevated concentration of copper of 362 mg/kg. Eight of the noninundated wetland samples, including one of the background samples, contained concentrations of arsenic exceeding the EPA BTAG level of 9.8 mg/kg; five of the noninundated wetlands samples contained concentrations of chromium exceeding the EPA BTAG level of 43.4 mg/kg; and four of the noninundated wetland samples, including one of the background samples, contained concentrations of copper exceeding the EPA BTAG level of 31.6 mg/kg. Additionally, one non-inundated wetland sample contained an elevated concentration of manganese above the EPA BTAG level of 460 mg/kg.

The sediment samples did not contain concentrations of SVOCs above the CRQL.

## 5.5 SURFACE WATER CONCLUSIONS

WESTON performed surface water and sediment sampling as part of this ESI. No hazardous substances were detected at elevated concentrations in the surface water samples. Elevated concentrations of arsenic, chromium, copper, and zinc were detected in the sediment samples collected from the wetlands, the unnamed tributary, and Schiminoe Creek. Arsenic, chromium, copper, and zinc were also detected at elevated concentrations in soil samples collected from the Site; therefore, a release of hazardous substances attributable to the Site-to-surface-water migration pathway has been documented. As a result of the release, over 1,700 feet of wetlands

located along the unnamed tributary have been impacted. Potential targets associated with the surface water pathway include the 400,000 people supplied with drinking water via a surface water intake on the Chickahominy River, the use of Schiminoe Creek and Chickahominy River as fisheries, and the 21.2 miles of wetland frontage located along the 15-mile TDL.

## **6.0 SOIL EXPOSURE AND AIR MIGRATION PATHWAYS**

This section provides information regarding physical conditions at the Site, targets associated with the soil exposure and air migration pathways, and conclusions reached for the soil exposure and air migration pathways. Soil samples collected as part of this ESI and associated analytical results are discussed in Sections 3.2 and 3.3, respectively.

### **6.1 PHYSICAL CONDITIONS**

As shown in Figure 2 and the photographic documentation log (Ref. 4), with the exception of the footprint of the on-site buildings, the New Kent property is consists primarily of bare soil and overgrown brush areas. The majority of the property, particularly the portion historically used for wood-treating, is enclosed within a fence. The western portion of the property is accessible; however, based on available information and analytical data of surface soil samples, it does not appear that wood-treating operations or treated wood was stored in this area. As a result of overland flow migration of contaminated soil via the on-site drainage ditches, soil and sediment in the drainage ditches beyond the fence-line contain concentrations of arsenic, chromium, copper, and zinc above background levels.

### **6.2 SOIL AND AIR TARGETS**

No schools, daycare centers, or residences are located on-site or within 200 feet of documented soil contamination. There are approximately 10 workers located on-site. The estimated population and wetland acreage within a 4-mile radius of the Site are summarized in the tables below.

**ESTIMATED POPULATION WITHIN 4 –MILES OF SITE**

<b>Radial Distance from Site (miles)</b>	<b>Population (number of persons)</b>
0.0 – 0.25	12
0.25 – 0.50	36
0.50 – 1.0	146
1.0 – 2.0	601
2.0 – 3.0	1,050
3.0 – 4.0	2,429
Total	4,274

Ref. 22

**WETLAND ACREAGE WITHIN 4 MILES OF SITE**

<b>Radial Distance from Site (miles)</b>	<b>Wetlands (acreage)</b>
≥0.00 - 0.25	30.97
>0.25 - 0.50	80.49
>0.50 - 1.0	496.40
>1.0 - 2.0	1,502.92
>2.0 - 3.0	1,642.86
>3.0 - 4.0	1,789.51
Total	5,543.15

Ref. 17

**6.3 SOIL EXPOSURE AND AIR MIGRATION PATHWAY CONCLUSIONS**

WESTON performed surface soil sampling at the New Kent site as part of this ESI. Based on the analytical results, contaminated surface soil containing arsenic, chromium, copper, and zinc has been documented on-site at concentrations exceeding EPA RSLs for industrial soil. Because the majority of the ground surface is bare, it is likely that on-site workers could come in contact with contaminated soil. The distance to the nearest residence is greater than 200 feet.

WESTON did not collect ambient air samples as part of this ESI. No laboratory quantitative or qualitative air samples are known to have been collected from the New Kent site. Based on

available data, no release of hazardous substances to the ambient air from on-site sources is known or suspected to have occurred, and no impacts to nearby residential populations or sensitive environments are known or suspected.

## **7.0 SUMMARY AND CONCLUSIONS**

From approximately 1977 to the late 1990s, wood treating operations were conducted on the property under several property owners. Lumber was pressure treated by means of a pressure/vacuum system saturated with CCA solution. Lumber was placed in a cylinder into which a pre-mixed solution of CCA and water was forced. Once the cylinder was filled, excess solution was vacuumed off and the treated wood was removed from the cylinder and stored on a drip pad until dry. CCA solution not retained by the wood was drained into a sump and recycled back into the treatment system. Past inspections conducted on the property noted that the drip pad was not bermed, stained soil was observed surrounding the drip pad and in drainage ditches that convey surface water runoff from the Site, treated wood chips were observed in the drainage ditches, and the treated wood was moved from the drip pad to the storage yard prior to regulations.

Historical and current analytical data indicate elevated concentrations of arsenic, chromium, copper, and zinc in on-site soil. Based on current analytical results, arsenic, chromium, copper, and zinc are present in sediment samples collected from wetlands, the unnamed tributary, and Schiminoe Creek at elevated concentrations, documenting an observed release to the surface water migration pathway. These contaminants were also detected in the groundwater samples collected from the on-site shallow monitoring wells. It appears that site-attributable hazardous substances, arsenic, chromium, copper, lead, and zinc, may be impacting shallow groundwater; however, a background shallow groundwater sample was not collected.

Groundwater is the sole source of drinking water within a 4-mile radius of the Site. However, groundwater samples collected from the on-site deep well and nearby wells did not contain elevated concentrations of site-attributable contaminants. Therefore, at the present time and based

on available information, the groundwater migration pathway is not a significant pathway of concern.

The Site is bordered to the north and east by wetlands. Sediment samples collected from the wetlands contained elevated concentrations of site-attributable contaminants. Additionally, sediment samples collected from the unnamed tributary and Schiminoe Creek contained elevated concentrations of arsenic, chromium, and copper. Schiminoe Creek and Chickahominy River are documented recreational fisheries. In addition, approximately 4000,000 persons are supplied with drinking water via a surface water intake on the Chickahominy River.

The ground surface at the Site consists primarily of bare soil and vegetated areas. There are no residences, schools, or daycare centers located on or within 200 feet of documented contaminated soil; however, there are at a maximum 10 on-site workers who could potentially be exposed to concentrations of arsenic, chromium, and copper at levels exceeding EPA RSLs for industrial soil.

Zinc	6	3.5E+04		41.1		16		22.7		93.7		73		25.4

Notes:  
RSL - Based on May 2014 concentrations for Industrial Soil with Target Risk of 1.0 and hazard quotient of 0.1  
\* - Listed value for chromium is for hexavalent chromium  
Bolded value indicates concentration is 3X background  
Shaded value indicates concentration exceeds the RSL  
CRQL - Contract required quantitation Limit  
RSL - Regional Screening Level  
J - Estimated value.  
J+ - Estimated value, biased high.  
J- - Estimated value, biased low.  
mg/kg - milligrams per kilogram  
NL - No listing in RSL table  
U - Result not detected above the detection limit.  
UJ - Result is estimated above the detection limit, but below the reporting limit.

Notes:

\* Indicates secondary MCL that may impact taste, odor, color but not associated with a health hazard

Shaded value indicates concentration exceeds primary MCL

B - Value observed in blank. Appears to be blank contamination.

CRQL - Contract-required quantitation limit

J - Estimated value.

MCL - Maximum Contaminant Level (EPA, 2009)

NL - No listed value

U - Result not detected above the detection limit.

ug/L - micrograms per liter

Notes:  
 B - Value observed in blank. Appears to be blank contamination.  
 CRQL - Contract-required quantitation limit  
 J - Estimated value.  
 J+ - Estimated value, biased high.  
 J- - Estimated value, biased low.  
 U - Result not detected above the detection limit.  
 UJ - Result is estimated above the detection limit, but below the reporting limit  
 ug/L - Micrograms per liter

Notes:

- BTAG - EPA freshwater sediments screening benchmarks (EPA, 2004)
- Bolded value indicates concentration is 3X background
- Shaded value indicates concentration exceeds BTAG standard
- CRQL - Contract required quantitation limit
- RSL - Regional Screening Level
- J - Estimated value.
- J+ - Estimated value, biased high.
- mg/kg - milligrams per kilogram
- NL - No listing
- U - Result not detected above the detection limit.
- UJ - Result is estimated above the detection limit, but below the reporting limit.

Notes:

BTAG - EPA freshwater sediments screening benchmarks (EPA, 2004)

Bolded value indicates concentration is 3X background

Shaded value indicates concentration exceeds BTAG standard

CRQL - Contract required quantitation Limit

RSL - Regional Screening Level

J - Estimated value.

J+ - Estimated value, biased high.

mg/kg - milligrams per kilogram

NL - No listing

U - Result not detected above the detection limit.

UJ - Result is estimated above the detection limit, but below the reporting limit.

**Date:** August 6, 2014

**To:** Brandon McDonald  
ESAT Region 3 Project Officer

**From:** Mahboobeh Mecanic  
Data Review Chemist

Kenneth W. Curry  
Oversight Chemist

**Subject:** Inorganic Data Validation (S4VEM)  
Site: New Kent Wood Preservatives, Inc.  
Case: 44460, SDG MC0AA0

## **OVERVIEW**

Case 44460, Sample Delivery Group (SDG) MC0AA0, consisted of twenty (20) soil samples analyzed for metals by ICP AES. All samples were analyzed by ALS Environmental (DATAAC) according to Contract Laboratory Program (CLP) Statement of Work (SOW) ISM01.3 through the Routine Analytical Services (RAS) program.

## **SUMMARY**

Data were validated according to Inorganic National Functional Guidelines utilizing Environmental Data Exchange and Evaluation System (EXES) and is assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual). Areas of concern with respect to data usability are discussed below.

## **MINOR PROBLEMS**

Matrix Spike recovery was low (<75%) for Sb. The post digestion spike recovery for this analyte was >75%. Positive results and quantitation limits for this analyte are estimated and are qualified "J" and "UJ", respectively.

Laboratory duplicate analysis was outside the control limits [20% Relative Percent Difference (RPD),  $\pm$  CRQL] for calcium (Ca) and iron (Fe). Positive results for these analytes are estimated and are qualified "J".

The Interference Check Standard (ICS) solutions A and AB reported positive results >MDL for K. Positive results for this analyte may have contributions from interfering analytes. Positive results for this analyte were considered estimated high and qualified "J+".

### **NOTES**

Analytes detected below CRQLs are qualified "J" unless reported at CRQLs and qualified "U" due to the presence of these analytes in the associated laboratory blanks.

Laboratory blanks reported positive results greater than Method Detection Limit (>MDL) but less than Contract Required Quantitation Limit (<CRQL) for barium (Ba), beryllium (Be), cadmium (Cd), cobalt (Co), nickel (Ni), potassium (K), sodium (Na) and vanadium (V). Positive results <CRQL for these analytes in affected samples are raised to the CRQL and qualified "U" due to blank contamination.

Both the Analytical Request Form (ARF) and Chain of Custody (COC) records requested analysis for arsenic (As), chromium (Cr) and copper (Cu) only. The laboratory analyzed and reported results for all ICP AES analytes. No action was taken by the reviewer.

Arsenic (As), Cr and Cu were detected above their respective CRQLs in all samples.

### **GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)**

- |    |   |
|----|---|
| U  | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.   |
| J  | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  |
| B  | The result is presumed a blank contaminant. This qualifier is used only for drinking water samples.   |
| J+ | The result is an estimated quantity, but the result may be biased high.   |
| J- | The result is an estimated quantity, but the result may be biased low.  |
| R  | The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample. |
| UJ | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.  |

## SDG Narrative

Case:	44460	Contract #:	EPW-09-036
SDG:	MCOAAO	ALS Set ID #:	1417548

**General Information:** The twenty samples in this SDG were analyzed by methodologies contained in ISM01.3. All concentration, analytical, and method qualifiers are defined in the SOW.

**Target Analytes:** Target analytes for this SDG are aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc.

**Holding Times:** All samples were prepared and analyzed within method required holding times.

**Initial and Continuing Calibration:** All initial and continuing calibration verification and blank analyses were performed within the designated frequency and recoveries of the verifications and concentrations of the blanks met method acceptance criteria.

**Interference Check Sample Analysis:** Results for the interference check samples met method acceptance criteria.

**Preparation Blanks:** The absolute values of all analyte concentrations in the preparation blank were lower than the Contract Required Quantitation Limits.

**Laboratory Control Sample Analysis:** Results for the analysis of the LCS met method acceptance criteria.

**Matrix Spike Analysis:** All matrix spike recoveries were within the limits of 75-125% with the exception of antimony.

**Matrix Duplicate Analysis:** All matrix duplicate results met method criteria with the exceptions of calcium and iron.

**Serial Dilution:** Serial Dilution results met method acceptance criteria.

**Miscellaneous Comments:** All calibration data is linear, please see raw data.

### Example Equations:

$$\text{Method 3050B: } C \times \frac{V_f}{W \times S} \times DF \div 1000 = \text{Concentration (mg/Kg)}$$

C = Instrument value in µg/L (The average of all replicate integrations).

Vf = Final digestion volume (mL)

W = Initial digestion Weight (g)

ADDRESS 960 West LeVoy Drive, Salt Lake City Utah 84123 USA | PHONE +1 801 266 7700 | FAX +1 801 268 9992  
ALS GROUP USA, CORP. Part of the ALS Group An ALS Limited Company

DF = Dilution Factor  
S = % Solids/100

Samples weighed and transferred into 100 mL flat-bottom tubes. QCs prepared as indicated above. 10 mL 1:1 HNO<sub>3</sub> added to all. Samples covered and placed on hotblock at ~95°C for 10 minutes, removed from heat, and allowed to cool. 5 mL concentrated HNO<sub>3</sub> added to all. Samples returned to hotblock for 30 minutes, removed from heat, and allowed to cool. Samples were returned to heat and allowed to reduce to 5 mL. Temperature was checked with thermometer 122074430, which read 95.0 °C. Samples removed from heat. 2 mL ASTM Type II H<sub>2</sub>O and 3 mL 30% H<sub>2</sub>O<sub>2</sub> added, returned to hotblock, and heated until bubbling reaction subsided. Samples removed from heat. An additional 1 mL of H<sub>2</sub>O<sub>2</sub> was added to all samples and heated until effervescence subsided. Samples removed from heat and allowed to cool. Samples returned to hotblock for 15 minutes, removed from heat, and allowed to reduce to 5 mL. Samples removed from heat and allowed to cool. 10 mL conc. HCl added. Samples returned to hotblock for 15 minutes, removed from heat, and allowed to cool. Samples diluted to 100 mL final volume with ASTM Type II H<sub>2</sub>O. Samples inverted several times to mix. Samples transferred to 50 mL tubes for analysis.

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning:** Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on [fedex.com](http://fedex.com). FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

## Precautionary Measures Against Hidden Hazards in Laboratory Samples

Notice to Laboratory PersonnelBackground

Under the authority of Section 104 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) of 1980, Section 311 of the Clean Water Act, and Subtitle I of the Resource Conservation and Recovery Act (RCRA), EPA has been delegated the responsibility to undertake response actions with respect to the release or potential release of oil, petroleum or hazardous substances that pose a substantial threat to human health or welfare, or the environment. In addition, EPA provides technical assistance to help mitigate endangerment of the public health, welfare or environment during other emergencies and natural disasters.

EPA's successful implementation of these emergency response action responsibilities requires that technical support capabilities be provided in the form of contracted Superfund Technical Assessment and Response Team (START) teams for each EPA Region. The Weston Solutions Inc. (WESTON) START Region III Eastern Area Contract provides support to EPA Region III.

Hazard Communication

The samples which accompany this notice have been shipped to your laboratory for analysis in accordance with applicable DOT or IATA Regulations and were collected by the WESTON START team and were tentatively designated by the field response team as either environmental or hazardous material samples.

In general, *Environmental Samples* are collected from streams, farm ponds, small lakes, wells and off-site soils that are not reasonably expected to be contaminated with hazardous materials. Samples of on-site soils or water and materials collected from drums, bulk storage tanks, obviously contaminated ponds, impoundments, lagoons, pools, and leachates from hazardous waste sites are considered *Hazardous Samples*. Samples which are obtained from a known radioactive material contamination site or which demonstrate beta or gamma activity greater than three times the average background as scanned with a Geiger-Mueller radiation survey meter are considered *Radioactive Samples*.

The samples which accompany this notice have been tentatively classified by the field response team as:

Environmental     Hazardous     Combination (Env. & Haz)     Radioactive

The field team which collected the samples used the following Level(s) of personal protection as designated by EPA and OSHA conventions to provided protection against possible radiological or chemical exposure:

Level A     Level B     Level C     Level D

*This information is intended for use as a guide for the safe handling of these laboratory samples in accordance with EPA and OSHA regulations. The sample classification(s) and Levels of personal protection used by the WESTON START team are not represented to be, nor are they adequate or applicable in all situations, nor are they intended to serve as substitutes for professional/personal judgment.*

ICP-14-042	4535/51	
ICP-14-036	4535/51	
ICP-14-052	4535/51	

**ANALYSIS PARAMETERS:**

Pump Rate = 25 rpm  
 RF Power = 1200 W  
 Auxiliary Gas = 0.2 L/min  
 Nebulizer Flow = 0.50 L/min  
 Coolant Gas Flow = 14 L/min  
 ASXpress Plus = 3 mL Loop

**Dilutions:** None were required.

**Pipettes:** ICP-10, ICP-1

**Comments:** No problems during analysis.

A Serial Dilution was done by combining 2 mL of MC0AB1 with 8 mL of ICP-14-057 (4535/52) in a 15 mL tube.

A Post Digestion Spike was done by combining 10 mL of MC0AB1 with 60.0 µL of 20 ppm Sb in a 15 mL tube.

Post Digestion Spike Targets: Sb - 120                      20 ppm Sb standard # 24141

From Page No. <u>X</u>	<u>8/5/25/12</u>	<u>RECIPES</u>
7.5% HNO <sub>3</sub>	=	TRANSFERRED SOME ASTM TYPE II H <sub>2</sub> O TO A 2L FLASK. ADD 150ML OF HNO <sub>3</sub> TO THE FLASK. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK, SHAKE TO MIX. USE FOR SO, ICB, CCB AND DILUTANT.
Sc IS	=	ADDED SOME WATER TO A 2L FLASK. ADD <sup>100 ml of</sup> 150 ML OF HNO <sub>3</sub> AND <sup>100 ml of</sup> 100 ML OF HCl. ADD 1.2 ML OF A 10,000 µg/ML Sc STANDARD. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK AND SHAKE WELL.
7.5% / 1% RINSE	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 2L FLASK. ADD 150ML OF HNO <sub>3</sub> + 10ML OF HCl. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK AND SHAKE WELL.
2ppm Zn.	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 200ML VOLUMETRIC FLASK. ADD 2ML OF HNO <sub>3</sub> . SPIKE IN 40µL OF 10,000 µg/ML Zn. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER AND SHAKE WELL. USE FOR TORCH ALIGNMENT.
5% / 5% RINSE	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 2L FLASK. ADD 100ML OF HNO <sub>3</sub> AND 100ML OF HCl TO THE FLASK. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK AND SHAKE WELL.
Thermo Torch Alignment Solution	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 250 ML FLASK. ADD 2.5 ML OF HNO <sub>3</sub> , 7.5 ML OF MeOH AND 50 ML OF 10,000 µg/ML Zn. BRING TO VOLUME WITH ASTM TYPE II H <sub>2</sub> O. STOPPER AND SHAKE TO MIX. 0.03 ML/L MeOH, 2 mg/L Zn IN 1% HNO <sub>3</sub> .
Sc Y IS	=	ADD SOME WATER TO A 2L FLASK, THEN ADD 100 ML OF HNO <sub>3</sub> AND 100 ML OF HCl TO THE FLASK. SPIKE IN 1.2 ML OF Sc STANDARD (10,000 µg/ML) AND 0.5 ML OF Y STANDARD (10,000 µg/ML). BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER AND SHAKE FLASK.
2% HNO <sub>3</sub>	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 2L FLASK. ADD 40ML OF HNO <sub>3</sub> TO THE FLASK. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK AND SHAKE WELL. USE FOR SO, ICB, CCB AND SERIAL DILUTIONS OR USE FOR RINSE.
2% Sc Y IS	=	ADD SOME ASTM TYPE II H <sub>2</sub> O TO A 2L FLASK. ADD 40ML OF HNO <sub>3</sub> TO THE FLASK. SPIKE IN 1.2 ML OF 10,000 µg/ML Sc STANDARD AND 0.5 ML OF 10,000 µg/ML Y STANDARD. BRING TO VOLUME WITH MORE ASTM TYPE II H <sub>2</sub> O. STOPPER FLASK AND SHAKE WELL.

**From:** Kurt Roby  
Data Reviewer

Kenneth W. Curry  
Oversight Chemist

**Subject:** Inorganic Data Validation (S4VEM)  
Site: New Kent Wood Preservatives, Inc.  
Case: 44460 SDG: MC0AC0

### **Overview**

Case 44460, Sample Delivery Group (SDG) MC0AC0, consisted of two (2) soil samples analyzed for metals by ICP-AES. Analyses were performed by ALS Laboratory Group (DATAC) according to Contract Laboratory Program (CLP) Statement of Work (SOW) ISM01.3 through the Routine Analytical Services (RAS) program.

### **Summary**

Data were validated according to inorganic National Functional Guidelines, utilizing Environmental Data Exchange and Evaluation System (EXES) and is assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual). The following validation narrative is an evaluation of laboratory reported data for the purpose of usability.

### **Minor Problems**

Matrix spike recoveries were low (<75% but >30%) for antimony (Sb) and manganese (Mn). Post-digestion spike recoveries were within control limits. Low recoveries may be attributed to matrix interferences or analyte lost during the digestion process. Positive results for these analytes are estimated and have been qualified "J".

Relative Percent Differences (RPDs) in the laboratory duplicate analysis were outside control limits [twenty (20) RPD,  $\pm$  Contract Required Quantitation Limit (CRQL)] for aluminum (Al), arsenic (As), lead (Pb), vanadium (V) and zinc (Zn). Positive results for these analytes are estimated and have been qualified "J".

## Notes

Analytes detected below CRQLs not attributed to blank contamination are qualified “J”.

Beryllium (Be), cadmium (Cd) and sodium (Na) have been positively identified in laboratory blanks associated with the samples in this SDG. Samples which reported positive results for these analytes less than the Contract Required Quantitation Limits (CRQLs) have been reported at the CRQL and qualified “U”.

Laboratory instrumentation reported a negative value for nickel (Ni) greater than absolute value of the Method Detection Limit (MDL) in a blank analysis. Positive results reported for this analyte in field samples were greater than two times (>2X) the absolute value of the blank concentration and were not qualified based on this outlier.

Reported results for potassium (K) and Na in ICP interference check standard ICSAB were less than CRQL; however, these analytes were not included in this standard. Positive results reported for Na in field samples were attributed to blank contamination. Positive results reported for K in field samples were significantly greater than the concentration found in ICSAB. No data were qualified based on these findings.

The laboratory identified chromium (Cr) and copper (Cu) exceeding control limits in the laboratory duplicate analysis. However, after rounding to the appropriate significant figures, RPDs for these analytes were within control limits. No data were qualified for these analytes based on this finding.

Chain of Custody records list analysis for As, Cr and Cu only; however, the laboratory reported the full target analyte list. All data were reported by the reviewer.

### Glossary of Data Qualifier Codes (INORGANIC)

- |    |   |
|----|---|
| U  | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.   |
| J  | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  |
| B  | The result is presumed a blank contaminant. This qualifier is used only for drinking water samples.   |
| J+ | The result is an estimated quantity, but the result may be biased high.   |
| J- | The result is an estimated quantity, but the result may be biased low.  |
| R  | The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample. |
| UJ | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.  |

# Sample Summary Report

Case No: 44460	Contract: EPW09036	SDG No: MC0AC0	Lab Code: DATAC

## SDG Narrative

Case:	44460	Contract #:	EPW-09-036
SDG:	MC0ACO	ALS Set ID #:	1417553

**General Information:** The two samples in this SDG were analyzed by methodologies contained in ISM01.3. All concentration, analytical, and method qualifiers are defined in the SOW.

**Target Analytes:** Target analytes for this SDG are aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc.

**Holding Times:** All samples were prepared and analyzed within method required holding times.

**Initial and Continuing Calibration:** All initial and continuing calibration verification and blank analyses were performed within the designated frequency and recoveries of the verifications and concentrations of the blanks met method acceptance criteria.

**Interference Check Sample Analysis:** Results for the interference check samples met method acceptance criteria.

**Preparation Blanks:** The absolute values of all analyte concentrations in the preparation blank were lower than the Contract Required Quantitation Limits.

**Laboratory Control Sample Analysis:** Results for the analysis of the LCS met method acceptance criteria.

**Matrix Spike Analysis:** All matrix spike recoveries were within the limits of 75-125% with the exceptions of antimony and manganese.

**Matrix Duplicate Analysis:** All matrix duplicate results met method criteria with the exceptions of aluminum, arsenic, chromium, copper, lead, vanadium, and zinc.

**Serial Dilution:** Serial Dilution results met method acceptance criteria.

**Miscellaneous Comments:** All calibration data is linear, please see raw data.

### Example Equations:

$$\text{Method 3050B: } C \times \frac{V_f}{W \times S} \times DF \div 1000 = \text{Concentration (mg/Kg)}$$

C = Instrument value in µg/L (The average of all replicate integrations).

Vf = Final digestion volume (mL)

W = Initial digestion Weight (g)

Samples weighed and transferred into 100 mL flat-bottom tubes. QCs prepared as indicated above. 10 mL 1:1 HNO<sub>3</sub> added to all. Samples covered and placed on hotblock at ~95°C for 10 minutes, removed from heat, and allowed to cool. 5 mL concentrated HNO<sub>3</sub> added to all. Samples returned to hotblock for 30 minutes, removed from heat, and allowed to cool. Samples were returned to heat and allowed to reduce to 5 mL. Temperature was checked with thermometer 122074430, which read 95.0 °C. Samples removed from heat. 2 mL ASTM Type II H<sub>2</sub>O and 3 mL 30% H<sub>2</sub>O<sub>2</sub> added, returned to hotblock, and heated until bubbling reaction subsided. Samples removed from heat. An additional 1 mL of H<sub>2</sub>O<sub>2</sub> was added to all samples and heated until effervescence subsided. Samples removed from heat and allowed to cool. Samples returned to hotblock allowed to reduce to 5 mL. Samples removed from heat and allowed to cool. 10 mL conc. HCl added. Samples returned to hotblock for 15 minutes, removed from heat, and allowed to cool. Samples diluted to 100 mL final volume with ASTM Type II H<sub>2</sub>O. Samples inverted several times to mix. Samples transferred to 50 mL tubes for analysis.

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning:** Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

## Precautionary Measures Against Hidden Hazards in Laboratory Samples

Notice to Laboratory PersonnelBackground

Under the authority of Section 104 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund) of 1980, Section 311 of the Clean Water Act, and Subtitle I of the Resource Conservation and Recovery Act (RCRA), EPA has been delegated the responsibility to undertake response actions with respect to the release or potential release of oil, petroleum or hazardous substances that pose a substantial threat to human health or welfare, or the environment. In addition, EPA provides technical assistance to help mitigate endangerment of the public health, welfare or environment during other emergencies and natural disasters.

EPA's successful implementation of these emergency response action responsibilities requires that technical support capabilities be provided in the form of contracted Superfund Technical Assessment and Response Team (START) teams for each EPA Region. The Weston Solutions Inc. (WESTON) START Region III Eastern Area Contract provides support to EPA Region III.

Hazard Communication

The samples which accompany this notice have been shipped to your laboratory for analysis in accordance with applicable DOT or IATA Regulations and were collected by the WESTON START team and were tentatively designated by the field response team as either environmental or hazardous material samples.

In general, *Environmental Samples* are collected from streams, farm ponds, small lakes, wells and off-site soils that are not reasonably expected to be contaminated with hazardous materials. Samples of on-site soils or water and materials collected from drums, bulk storage tanks, obviously contaminated ponds, impoundments, lagoons, pools, and leachates from hazardous waste sites are considered *Hazardous Samples*. Samples which are obtained from a known radioactive material contamination site or which demonstrate beta or gamma activity greater than three times the average background as scanned with a Geiger-Mueller radiation survey meter are considered *Radioactive Samples*.

The samples which accompany this notice have been tentatively classified by the field response team as:

Environmental     Hazardous     Combination (Env. & Haz)     Radioactive

The field team which collected the samples used the following Level(s) of personal protection as designated by EPA and OSHA conventions to provided protection against possible radiological or chemical exposure:

Level A     Level B     Level C     Level D

*This information is intended for use as a guide for the safe handling of these laboratory samples in accordance with EPA and OSHA regulations. The sample classification(s) and Levels of personal protection used by the WESTON START team are not represented to be, nor are they adequate or applicable in all situations, nor are they intended to serve as substitutes for professional/personal judgment.*

#### ANALYSIS PARAMETERS:

Pump Rate = 2.5 rpm  
RF Power = 1200 W  
Auxiliary Gas = 0.2 L/min  
Nebulizer Flow = 0.50 L/min  
Coolant Gas Flow = 14 L/min  
ASXpress Plus = 3 mL Loop

Dilutions: None were required.

Pipettes: ICP-10, ICP-1

Comments: No problems during analysis.

A Serial Dilution was done by combining 2 mL of MC0AC0 with 8 mL of ICP-14-057 (4535/52) in a 15 mL tube.

A Post Digestion Spike was done by combining 10 mL of MC0AC0 with 60.0  $\mu\text{L}$  of 20 ppm Sb and 71.2  $\mu\text{L}$  of 1000 ppm Mn in a 15 mL tube.

Post Digestion Spike Targets: Sb - 120 20 ppm Sb standard # 24141

Mn - 7120 1000 ppm Mn standard # 24370

ALS Environmental ICP  
 TITLE ~~DATACHEM LABORATORIES~~ SOLUTION/REAGENTS LOGBOOK

Project No. N/A  
 Book No. 4535

From Page No. X <sup>85-7125/12</sup> RECIPES

7.5%  $\text{HNO}_3$  = TRANSFERRED SOME ASTM TYPE II  $\text{H}_2\text{O}$  TO A 2L FLASK. ADD 150ML OF  $\text{HNO}_3$  TO THE FLASK. BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER FLASK, SHAKE TO MIX. USE FOR SO, ICB, CCB AND DILUTANT.

Sc IS = ADDED SOME WATER TO A 2L FLASK. ADD <sup>100 mL OF</sup> 150ML OF  $\text{HNO}_3$ . ADD <sup>100 mL OF</sup> 1.2ML OF A 10,000  $\mu\text{g}/\text{ML}$  Sc STANDARD. BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER FLASK AND SHAKE WELL.

7.5% / 1% RINSE = ADD SOME ASTM TYPE II  $\text{H}_2\text{O}$  TO A 2L FLASK. ADD 150ML OF  $\text{HNO}_3$  + 10ML OF  $\text{HCl}$ . BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER FLASK AND SHAKE WELL.

2ppm Zn. = ADD SOME ASTM TYPE II  $\text{H}_2\text{O}$  TO A 200ML VOLUMETRIC FLASK. ADD 2ML OF  $\text{HNO}_3$ . SPIKE IN 40  $\mu\text{L}$  OF 10,000  $\mu\text{g}/\text{ML}$  Zn. BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER AND SHAKE WELL. USE FOR TORN ALIGNMENT.

5% / 5% RINSE = ADD SOME ASTM TYPE II  $\text{H}_2\text{O}$  TO A 2L FLASK. ADD 100ML OF  $\text{HNO}_3$  AND 100ML OF  $\text{HCl}$  TO THE FLASK. BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER FLASK AND SHAKE WELL.

Thermo Torch Alignment Solution = Add some ASTM Type II  $\text{H}_2\text{O}$  to a 250 mL flask. Add 2.5 mL of  $\text{HNO}_3$ , 7.5 mL of MeOH and 50 mL of 10,000  $\mu\text{g}/\text{ML}$  Zn. Bring to volume with ASTM Type II  $\text{H}_2\text{O}$ . Stopper and shake to mix. 0.03 mL/L MeOH, 2 mg/L Zn in 1%  $\text{HNO}_3$ .

Sc Y IS = ADD SOME WATER TO A 2L FLASK, THEN ADD 100 ML OF  $\text{HNO}_3$  AND 100 ML OF  $\text{HCl}$  TO THE FLASK. SPIKE IN 1.2 ML OF Sc STANDARD (10,000  $\mu\text{g}/\text{ML}$ ) AND 0.5 ML OF Y STANDARD (10,000  $\mu\text{g}/\text{ML}$ ). BRING TO VOLUME WITH MORE ASTM TYPE II  $\text{H}_2\text{O}$ . STOPPER AND SHAKE FLASK.

2%  $\text{HNO}_3$  = Add some ASTM Type II  $\text{H}_2\text{O}$  to a 2L flask. Add 40ml of  $\text{HNO}_3$  to the flask. Bring to volume with more ASTM Type II  $\text{H}_2\text{O}$ . Stopper flask and shake well. Use for SO, ICB, CCB and Serial Dilutions or use for Rinse.

2% Sc Y IS = Add some ASTM Type II  $\text{H}_2\text{O}$  to a 2L flask. Add 40ml of  $\text{HNO}_3$  to the flask. Spike in 1.2 ml of 10,000  $\mu\text{g}/\text{ML}$  Sc standard and 0.5 ml of 10,000  $\mu\text{g}/\text{ML}$  Y standard. Bring to volume with more ASTM Type II  $\text{H}_2\text{O}$ . Stopper flask and shake well.

**Date:** October 17, 2014

**To:** Brandon McDonald  
ESAT Region 3 Project Officer

**From:** Kurt Roby  
Data Reviewer

Lisa Penix  
Oversight Chemist

**Subject:** Inorganic Data Validation (S4VEM)  
Site: New Kent Wood Preservatives, Inc.  
Case: 44664 SDG: MC0AD4

### **Overview**

Case 44664, Sample Delivery Group (SDG) MC0AD4, consisted of three (3) sediment samples and seventeen (17) soil samples including one (1) field duplicate pair analyzed for metals by ICP-AES. Analyses were performed by ChemTech Consulting Group (CHEM) according to Contract Laboratory Program (CLP) Statement of Work (SOW) ISM01.3 through the Routine Analytical Services (RAS) program.

### **Summary**

Data were validated according to inorganic National Functional Guidelines, utilizing Environmental Data Exchange and Evaluation System (EXES) and is assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual). The following validation narrative is an evaluation of laboratory reported data for the purpose of usability.

### **Minor Problems**

Matrix spike recovery was low (<75% but >30%) for antimony (Sb). The post-digestion spike recovery was within control limits. Low recoveries may be attributed to matrix interferences or analyte lost during the digestion process. Positive results and quantitation limits for this analyte are estimated and have been qualified “J” and “UJ”, respectively.

Percent recovery for selenium (Se) in ICP interference check standard ICSAB exceeded the control limit (>120%). Positive results reported for this analyte may be estimated high due to possible elemental interferences and have been qualified “J+”.

Percent difference (%D) in the ICP serial dilution analysis was outside the control limit (>10%) for cadmium (Cd). Positive results for this analyte are estimated due to possible physical or chemical interferences in the sample matrix and have been qualified “J”.

### **Notes**

Analytes detected below Contract Required Quantitation Limits (CRQLs) not attributed to blank contamination are qualified “J”.

Potassium has been positively identified in laboratory blanks associated with the samples in this SDG. Samples which reported positive results for this analyte less than CRQL have been reported at the CRQL and qualified “U”.

Laboratory instrumentation reported a negative value for potassium (K) in ICP interference check standard ICSAB greater than the absolute value of the Method Detection Limit (MDL); however, this analyte was not included in this standard. Positive results reported for this analyte less than ten times (<10X) the absolute value of the standard concentration are attributed to blank contamination and have not been qualified due to this outlier.

Results reported for field duplicate pair MC0AD6/MC0AD7 were within twenty (20) Relative Percent Difference (RPD),  $\pm$  CRQL only for Sb, Cd, K, Se, silver (Ag), sodium (Na) and thallium (Tl). No data were qualified based on these findings.

### **Glossary of Data Qualifier Codes (INORGANIC)**

- |    |   |
|----|---|
| U  | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.   |
| J  | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  |
| B  | The result is presumed a blank contaminant. This qualifier is used only for drinking water samples.   |
| J+ | The result is an estimated quantity, but the result may be biased high.   |
| J- | The result is an estimated quantity, but the result may be biased low.  |
| R  | The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample. |
| UJ | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.  |

DCN: R3ESAT-2014-V558

## Sample Summary Report

Case No: 44664	Contract: EPW09038	SDG No: MC0AD4	Lab Code: CHEM

## SDG NARRATIVE

USEPA  
 SDG # MC0AD4  
 CASE # 44664  
 CONTRACT # EPW09038  
 LAB NAME: CHEMTECH  
 LAB CODE: CHEM  
 CHEMTECH PROJECT #F3940

### A. Number of Samples and Date of Receipt

20 soil samples were delivered to the laboratory intact on 09/13/2014.

### B. Parameters

Test requested for Metals CLP Full = Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Silver, Selenium, Sodium, Thallium, Vanadium, Zinc.

### C. Cooler Temp

Indicator Bottle: Presence/Absence  
 Cooler: 3°C

### D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: Several samples from SDG MC0AD4 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MC0AE3	40
MC0AE6	30.2

Issue 2: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Issue 3: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

**CHEMTECH**  
**284 Sheffield Street**  
**Mountainside, NJ 07092**

**E. Corrective Action taken for above:**

Resolution 1: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5.

Resolution 2: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Resolution 3: Per Region 3, MC0AJ3 is for Case 44664. The station location and collection time for sample MC0AJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

**F. Analytical Techniques:**

All analyses were based on CLP Methodology by method ISM01.3

**G. Calculation:**

*Calculation for ICP-AES Soil Sample:*

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

$$\text{Concentration (mg/kg)} = \frac{C \times V_f \times DF}{W \times S}$$

Where,

C = Instrument value in ppm (The average of all replicate exposures)

V<sub>f</sub> = Final digestion volume (mL)

W = Initial aliquot amount (g) (Sample amount taken in prep)

S = % Solids / 100 (Fraction of Percent Solids)

DF = Dilution Factor

**Example Calculation:**

If C = 12.34 ppm

V<sub>f</sub> = 100 ml

W = 1.20 g

S = 0.90 (90/100)

DF = 1

**CHEMTECH**  
**284 Sheffield Street**  
**Mountainside, NJ 07092**

$$\begin{aligned} \text{Concentration (mg/kg)} &= 12.34 \times \frac{100}{1.2 \times 0.90} \times 1 \\ &= 1142.6 \text{ mg/kg} \\ &= 1140 \text{ mg/kg (Reported Result with Signification)} \end{aligned}$$

**H. QA/ QC**

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Antimony. Duplicate sample did meet requirements. Serial Dilution did meet requirements except for Cadmium.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

If yes, were raw data generated before application of background corrections?	(Yes/No)	<u>NO</u>	<u>N/A</u>

The laboratory did not receive any instructions with this SDG to modify the SOW standard laboratory sample preparation procedures (e.g., subsampling). To aid in the determination of data usability with respect to project decisions, any modifications performed are described below.

Comments: Chemical or physical interference effect was suspected and the data for all affected analytes in the sample received and associated with this serial dilution were flagged with "E".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Data Package and in the electronic data submitted has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:** 1.033 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 5 µg/mL	Silicon, Si	1,000 ± 7 µg/mL
Tin, Sn	1,001 ± 7 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.

$[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**      10,006 ± 53 µg/mL - weighted mean

**Certified Density:**                1.034 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Available Upon Request

**(A) SAMPLE DESCRIPTION**

Enclosed is a set of one (1) or more Aqueous Inorganic Reference Materials containing various analyte concentrations. ICV1 and ICV5 are in a matrix of dilute nitric acid. ICV6 is in a matrix of dilute basic solution. **For the reference material source in reporting ICVs use "USEPA". For the reference material lot number for the ICV1, ICV5, and ICV6 solutions use "ICV1-0307", "ICV5-0508", and "ICV6-0400", respectively.**

**(B) BREAKAGE OR MISSING ITEMS**

Check the contents of the shipment carefully for any broken, leaking, or missing items. Check that the seal is intact on each bottle. Refer to the enclosed chain-of-custody record. Report any problems to Mr. Keith Strout, Shaw Environmental, Inc. at (702) 895-8722. If requested, return the chain-of-custody record with appropriate annotations and signatures to the address provided below.

Las Vegas, NV 89120

**(C) ANALYSIS OF SAMPLES**

The Initial Calibration Verification Solutions (ICVs) are to be used to evaluate the accuracy of the initial calibrations of ICP, AA, and Cyanide colorimetric instruments, and are to be used with the CLP SOWs and revisions. The values for each element in the ICVs are listed below in µg/L (ppb) for the resulting solution(s) after the dilution of the concentrate(s) according to the following instructions. Use Class 'A' glassware to prepare the solution(s).

**ICV1-0307** For ICP-AES use: dilute the ICV1 concentrate 10-fold with 2% (v/v) nitric acid; pipet 10 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 2% (v/v) nitric acid.

For ICP-MS use: dilute the ICV1 concentrate 50-fold with 1% (v/v) nitric acid; pipet 2 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 1% (v/v) nitric acid.

**ICV5-0508** For the cold vapor analysis of mercury by AA: dilute the ICV5 concentrate 100-fold with 2% (v/v) nitric acid; pipet 1 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 2% (v/v) nitric acid. The ICV5 concentrate is prepared in 0.05% (w/v)  $K_2Cr_2O_7$  and 5% (v/v) nitric acid.

**ICV6-0400** For the analysis of cyanide: dilute the ICV6 concentrate 100-fold with Type II water; pipet 1 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with Type II water. Distill this solution along with the samples before analysis. The cyanide concentrate is prepared from  $K_3Fe(CN)_6$ , Type II water, and 0.1 % sodium hydroxide, and will decompose rapidly if exposed to light.

**NOTE:** USE TYPE II WATER AND HIGH-PURITY ACIDS FOR ALL DILUTIONS.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                      1,001 ± 5 µg/mL -weighted mean-

**Certified Density:**                              1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of  $k = 2$ .

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a+b}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a+b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{1/2}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**      1,003 ± 4 µg/mL - weighted mean

**Certified Density:**                  1.022 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.

$[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 2.0 DESCRIPTION OF CRM**                      **1000 µg/mL Nickel in 2% (v/v) HNO<sub>3</sub>**
- Catalog Number:                              CGNI1-1, CGNI1-2, and CGNI1-5
- Lot Number:                                      **G2-NI02086**
- Starting Material:                              Ni pieces
- Starting Material Purity (%):              99.9998
- Starting Material Lot No:                    1559
- Matrix:    2% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                  1,002 ± 4 µg/mL -weighted mean-

**Certified Density:**                          1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- 4.1 Assay Method #1**                              **1,001 ± 3 µg/mL**  
ICP Assay NIST SRM 3136 Lot Number: 000612
- Assay Method #2**                              **1,002 ± 3 µg/mL**  
EDTA NIST SRM 928 Lot Number: 928

2.0 **DESCRIPTION OF CRM**                      **1000 µg/mL Copper in 3% (v/v) HNO3**

Catalog Number:                      CGCU1-1, CGCU1-2, and CGCU1-5

Lot Number:                                **F2-CU02147**

Starting Material:                      Cu shot

Starting Material Purity (%):        100.0000

Starting Material Lot No:              1718

Matrix:                                        3% (v/v) HNO3

3.0 **CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**              999 ± 5 µg/mL -weighted mean-

**Certified Density:**                      1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Arsenic, As	1,000 ± 7 µg/mL	Cadmium, Cd	500.0 ± 3.2 µg/mL	Lead, Pb	1,000 ± 7 µg/mL
Selenium, Se	1,000 ± 7 µg/mL	Thallium, Tl	1,000 ± 7 µg/mL		

Certified Density: 1.043 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Trace Impurities - Iron (Fe)	<= 15.0 ppb	< 1.0
Trace Impurities - Lead (Pb)	<= 1.0 ppb	< 0.5
Trace Impurities - Lithium (Li)	<= 1.0 ppb	< 0.2
Trace Impurities - Magnesium (Mg)	<= 10.0 ppb	0.2
Trace Impurities - Manganese (Mn)	<= 1.0 ppb	< 0.4
Trace Impurities - Mercury (Hg)	<= 0.5 ppb	0.1
Trace Impurities - Molybdenum (Mo)	<= 10.0 ppb	< 5.0
Trace Impurities - Nickel (Ni)	<= 4.0 ppb	< 0.3
Trace Impurities - Niobium (Nb)	<= 1.0 ppb	0.2
Trace Impurities - Potassium (K)	<= 9.0 ppb	< 2.0
Trace Impurities - Selenium (Se), For Information Only	ppb	1.0
Trace Impurities - Silicon (Si)	<= 100.0 ppb	< 10.0
Trace Impurities - Silver (Ag)	<= 1.0 ppb	< 0.3
Trace Impurities - Sodium (Na)	<= 100.0 ppb	< 5.0
Trace Impurities - Strontium (Sr)	<= 1.0 ppb	< 0.2
Trace Impurities - Tantalum (Ta)	<= 1.0 ppb	< 0.9
Trace Impurities - Thallium (Tl)	<= 5.0 ppb	< 2.0
Trace Impurities - Tin (Sn)	<= 5.0 ppb	< 0.8
Trace Impurities - Titanium (Ti)	<= 1.0 ppb	0.5
Trace Impurities - Vanadium (V)	<= 1.0 ppb	< 0.2
Trace Impurities - Zinc (Zn)	<= 5.0 ppb	< 0.3
Trace Impurities - Zirconium (Zr)	<= 1.0 ppb	< 0.1

For Laboratory, Research or Manufacturing Use

Product Information (not specifications):

Appearance (clear, fuming liquid)

Meets ACS Specifications

Country of Origin: US

Packaging Site: Phillipsburg Mfg Ctr &amp; DC

# CERTIFICATE OF ANALYSIS

M3224

## 1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

## 2.0 PRODUCT DESCRIPTION

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

## 3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

### Assay Information:

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

M3225

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105)).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGMG10  
 Lot Number: G2-MG03120  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Magnesium  
 Starting Material: Mg chips  
 Starting Material Lot#: 1484  
 Starting Material Purity: 99.9995%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 9,973 ± 20 µg/mL -weighted mean-  
 Certified Density: 1.053 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	9,955 ± 29 µg/mL ICP Assay NIST SRM 3131a Lot Number: 050302
Assay Method #2	9,986 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                              3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:

B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.033      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**(A) SAMPLE DESCRIPTION**

Enclosed is a set of one (1) or more Aqueous Inorganic Reference Materials containing various analyte concentrations. ICV1 and ICV5 are in a matrix of dilute nitric acid. ICV6 is in a matrix of dilute basic solution. **For the reference material source in reporting ICVs use "USEPA". For the reference material lot number for the ICV1, ICV5, and ICV6 solutions use "ICV1-0307", "ICV5-0508", and "ICV6-0400", respectively.**

**(B) BREAKAGE OR MISSING ITEMS**

Check the contents of the shipment carefully for any broken, leaking, or missing items. Check that the seal is intact on each bottle. Refer to the enclosed chain-of-custody record. Report any problems to Mr. Keith Strout, Shaw Environmental, Inc. at (702) 895-8722. If requested, return the chain-of-custody record with appropriate annotations and signatures to the address provided below.

**QUALITY ASSURANCE TECHNICAL SUPPORT LABORATORY  
Shaw Environmental, Inc.

Las Vegas, NV 89120**

**(C) ANALYSIS OF SAMPLES**

The Initial Calibration Verification Solutions (ICVs) are to be used to evaluate the accuracy of the initial calibrations of ICP, AA, and Cyanide colorimetric instruments, and are to be used with the CLP SOWs and revisions. The values for each element in the ICVs are listed below in µg/L (ppb) for the resulting solution(s) after the dilution of the concentrate(s) according to the following instructions. Use Class 'A' glassware to prepare the solution(s).

**ICV1-0307** For ICP-AES use: dilute the ICV1 concentrate 10-fold with 2% (v/v) nitric acid; pipet 10 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 2% (v/v) nitric acid.

For ICP-MS use: dilute the ICV1 concentrate 50-fold with 1% (v/v) nitric acid; pipet 2 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 1% (v/v) nitric acid.

**ICV5-0508** For the cold vapor analysis of mercury by AA: dilute the ICV5 concentrate 100-fold with 2% (v/v) nitric acid; pipet 1 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with 2% (v/v) nitric acid. The ICV5 concentrate is prepared in 0.05% (w/v)  $K_2Cr_2O_7$  and 5% (v/v) nitric acid.

**ICV6-0400** For the analysis of cyanide: dilute the ICV6 concentrate 100-fold with Type II water; pipet 1 mL of the concentrate into a 100 mL volumetric flask and dilute to volume with Type II water. Distill this solution along with the samples before analysis. The cyanide concentrate is prepared from  $K_3Fe(CN)_6$ , Type II water, and 0.1 % sodium hydroxide, and will decompose rapidly if exposed to light.

**NOTE:** USE TYPE II WATER AND HIGH-PURITY ACIDS FOR ALL DILUTIONS.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

- Certified Concentration:**                    1,001 ± 5 µg/mL -weighted mean-
- Certified Density:**                            1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a+b}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a+b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{1/2}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**              1,001 ± 6 µg/mL - weighted mean

**Certified Density:**                        1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = \frac{2 [(\sum s_i)^2]^{1/2}}{(n)^{1/2}}$$

$\sum s_i$  = The summation of all significant estimated errors

(Most common are the errors from instrumental measurement, weighing, dilution to volume and the fixed error reported on the NIST SRM certificate of analysis)

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 4.1 Assay Method #1**                      **1,002 ± 4 µg/mL**

The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

- 2.0 **DESCRIPTION OF CRM**                      **1000 µg/mL Boron in H2O**
- Catalog Number:                      CGB1-1, CGB1-2, and CGB1-5
- Lot Number:                              **F2-B02109**
- Starting Material:                      H3BO3
- Starting Material Purity (%):        99.9995
- Starting Material Lot No:              1631
- Matrix:                                    H2O

3.0 **CERTIFIED VALUES AND UNCERTAINTIES**

- Certified Concentration:**            999 ± 5 µg/mL -weighted mean-
- Certified Density:**                    1.000 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of  $k = 2$ .

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

$(\bar{x})$  = mean

$x_i$  = individual results

$n$  = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**Certified Density:**                1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**      **1000 µg/mL Antimony in HF in 2% (v/v) HNO<sub>3</sub> / tr. HF**

Catalog Number:            CGSBF1-1, CGSBF1-2, and CGSBF1-5

Lot Number:                **G2-SB03021**

Starting Material:         Sb shot

Starting Material Purity (%):    99.9997

Starting Material Lot No:    1647

Matrix:                      2% (v/v) HNO<sub>3</sub> / tr. HF

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**    1,006 ± 5 µg/mL -No weighted mean

**Certified Density:**            1.010 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

**Characterization of CRM by two independent methods**

**Characterization of CRM by one method**

<p>Certified Value, <math>X_{CRM}</math>, where two methods of characterization are used, is the weighted mean of the two results = <math>[(w_a)(X_a) + (w_b)(X_b)]</math></p> <p><math>X_a</math> is the mean of Assay Method A with standard uncertainty <math>U_{char a}</math>.</p> <p><math>X_b</math> is the mean of Assay Method B with standard uncertainty <math>U_{char b}</math>.</p> <p><math>w_a</math> and <math>w_b</math> = The weighting factors for each method calculated using the inverse square of the variance:</p> $w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$ $w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$ <p>CRM Expanded Uncertainty (<math>\pm</math>) = <math>U_{CRM} = k (U_{char a}^2 + U_{char b}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}</math></p> <p><math>U_{char a}</math> and <math>U_{char b}</math> are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures; <math>u_{bb}</math> = bottle to bottle homogeneity standard uncertainty; <math>u_{lts}</math> = long term stability standard uncertainty (storage); <math>u_{sts}</math> = short term stability standard uncertainty (transportation).</p>	<p>Certified Value, <math>X_{CRM}</math>, where one method of characterization is used, is the mean of individual results:</p> <p><math>X_a</math> = Mean <math>X_a</math> is the mean of Assay Method A with standard uncertainty <math>U_{char a}</math>.</p> <p>CRM Expanded Uncertainty (<math>\pm</math>) = <math>U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}</math></p> <p><math>U_{char a}</math> is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures; <math>u_{bb}</math> = bottle to bottle homogeneity standard uncertainty; <math>u_{lts}</math> = long term stability standard uncertainty (storage); <math>u_{sts}</math> = short term stability standard uncertainty (transportation).</p>

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

M3156 To M3160

**1.0** INORGANIC VENTURES is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**      **10000 µg/mL Indium in 5% (v/v) HNO3**

Catalog Number:            CGIN10-1, CGIN10-2, and CGIN10-5

Lot Number:                 **F2-IN01095**

Starting Material:           In shot

Starting Material Purity (%): 99.9998

Starting Material Lot No:    1775, 1777

Matrix:                        5% (v/v) HNO3

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**    10,050 ± 51 µg/mL -weighted mean-

**Certified Density:**            1.033 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Certified Value  $(\bar{x}) = \frac{\sum x_i}{n}$

(  $\bar{x}$  ) = mean  
 $x_i$  = individual results  
 n = number of measurements

Uncertainty  $(\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

## 1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

## 2.0 PRODUCT DESCRIPTION

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

## 3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

### Assay Information:

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

## CERTIFICATE OF ANALYSIS

M3225

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105)).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGMG10  
 Lot Number: G2-MG03120  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Magnesium  
 Starting Material: Mg chips  
 Starting Material Lot#: 1484  
 Starting Material Purity: 99.9995%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 9,973 ± 20 µg/mL -weighted mean-  
 Certified Density: 1.053 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	9,955 ± 29 µg/mL ICP Assay NIST SRM 3131a Lot Number: 050302
Assay Method #2	9,986 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning:** Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

**Cc:** Slizys, Dan; Jarmael Burman; Elaine Stiles; Kevin Martin; Colleen Walling; Sharon Roberson  
**Subject:** Region 03 | Case 44664 | Lab CHEM | SDG MC0AD4 | Issue Non-standard matrix | FINAL

Himanshu,

Issue: Several samples from SDG MC0AD4 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MC0AE3	40
MC0AE6	30.2

Resolution: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

WHITLEE DEAN

**Importance:** High

Hello Whitlee,

We are sending this email with reference to % solids issue for SDG (MC0AD4) & Case (44664).

Some samples from SDG (MC0AD4) have % solids results less than 50% but more than 30%. Please see below table for detail.

EPA Sample ID	% Solids
MC0AE3	40
MC0AE6	30.2

Please advise.

Regards,

**Subject:** Region 03 | Case 44664 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC | FINAL  
**Attachments:** 44673 - Lab COCs.pdf; 44664 - Lab COCs.pdf

Zhaleh,

Issue 1: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Resolution 1: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Issue 2: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

Resolution 2: Per Region 3, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

WHITLEE DEAN

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

Could you confirm the sampler's response before I send the Final ROC?

For Issue 1: the case number on the sample tags and label are correct and are for Case 44664.

For Issue 2: per the corrected COC provided by the sampler, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label .

Please let me know if you have any questions.

Thanks!

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

The discrepancy of the case numbers was due to an incorrect case number on the chain of custody. I have attached corrected laboratory copies of the COCs for both RAS 44664 and RAS 44673. I hope this helps to clarify the issue, please let me know if you have additional questions.

Regards,  
 Laura

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Whitlee,

The samples are for case 44673 Mark Fisher as collector. The TR/COC indicates in Station Location column NKWP-WS-11 This could be inorganic sample MC0AJ3.

Laura,

Please have Nancy and Mark try to resolve this issue.

Nancy Shannon is the sample collector for case 44664.

**Subject:** NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Good Morning,

CHEM is reporting the following issues. Please advise as to how the laboratory should proceed.

Issue 1: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Issue 2: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

Please let me know if you have any questions.

Thanks,

WHITLEE DEAN

**Subject:** Inorganic Data Validation (S4VEM)  
Site: New Kent Wood Preservatives, Inc.  
Case: 44664 SDG: MC0AF1

### **Overview**

Case 44664, Sample Delivery Group (SDG) MC0AF1, consisted of five (5) soil and eight (8) sediment samples including one (1) field duplicate pair analyzed for metals by ICP-AES. Analyses were performed by ChemTech Consulting Group (CHEM) according to Contract Laboratory Program (CLP) Statement of Work (SOW) ISM01.3 through the Routine Analytical Services (RAS) program.

### **Summary**

Data were validated according to inorganic National Functional Guidelines, utilizing Environmental Data Exchange and Evaluation System (EXES) and is assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual). The following validation narrative is an evaluation of laboratory reported data for the purpose of usability.

### **Minor Problems**

Matrix spike recovery was low (<75% but >30%) for antimony (Sb). The post-digestion spike recovery was within control limits. Low recoveries may be attributed to matrix interferences or analyte lost during the digestion process. Positive results and quantitation limits for this analyte are estimated and have been qualified “J” and “UJ”, respectively.

Percent recovery for selenium (Se) in ICP interference check standard ICSAB exceeded the control limit (>120%). Positive results reported for this analyte may be estimated high due to possible elemental interferences and have been qualified “J+”.

Laboratory instrumentation reported a negative value for potassium (K) in ICP interference check standard ICSAB greater than the absolute value of the Method Detection Limit (MDL); however, this analyte was not included in this standard. Positive results reported for this analyte are attributed to blank contamination and have not been qualified due to this outlier. Quantitation limits for this analyte are estimated due to possible elemental interferences and have been qualified "UJ".

### **Notes**

Analytes detected below Contract Required Quantitation Limits (CRQLs) not attributed to blank contamination are qualified "J".

Potassium has been positively identified in laboratory blanks associated with the samples in this SDG. Samples which reported positive results for this analyte less than CRQL have been reported at the CRQL and qualified "U".

Results reported for field duplicate pair MC0AF6/MC0AF7 were within twenty (20) Relative Percent Difference (RPD),  $\pm$  CRQL for all analytes with the exception of chromium (Cr). No data were qualified based on these findings.

### **Glossary of Data Qualifier Codes (INORGANIC)**

U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
B	The result is presumed a blank contaminant. This qualifier is used only for drinking water samples.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

DCN: R3ESAT-2014-V557

## SDG NARRATIVE

USEPA  
 SDG # MC0AF1  
 CASE # 44664  
 CONTRACT # EPW09038  
 LAB NAME: CHEMTECH  
 LAB CODE: CHEM  
 CHEMTECH PROJECT #F3941

### A. Number of Samples and Date of Receipt

13 soil samples were delivered to the laboratory intact on 09/13/2014.

### B. Parameters

Test requested for Metals CLP Full = Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Silver, Selenium, Sodium, Thallium, Vanadium, Zinc.

### C. Cooler Temp

Indicator Bottle: Presence/Absence  
 Cooler: 2°C

### D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: Several samples from SDG MC0AF1 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MC0AF8	45.7
MC0AF9	48.1
MC0AG1	43.6
MC0AG2	32.5

Issue 2: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Issue 3: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

**CHEMTECH**  
**284 Sheffield Street**  
**Mountainside, NJ 07092**

**E. Corrective Action taken for above:**

Resolution 1: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5. The laboratory will note the issue in the SDG Narrative.

Resolution 2: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Resolution 3: Per Region 3, MC0AJ3 is for Case 44664. The station location and collection time for sample MC0AJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

**F. Analytical Techniques:**

All analyses were based on CLP Methodology by method ISM01.3

**G. Calculation:**

*Calculation for ICP-AES Soil Sample:*

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

$$\text{Concentration (mg/kg)} = C \times \frac{V_f}{W \times S} \times DF$$

Where,

C = Instrument value in ppm (The average of all replicate exposures)

Vf = Final digestion volume (mL)

W = Initial aliquot amount (g) (Sample amount taken in prep)

S = % Solids / 100 (Fraction of Percent Solids)

DF = Dilution Factor

**Example Calculation:**

If C = 12.34 ppm

Vf = 100 ml

W = 1.20 g

S = 0.90 (90/100)

DF = 1

**CHEMTECH**  
**284 Sheffield Street**  
**Mountainside, NJ 07092**

$$\begin{aligned} \text{Concentration (mg/kg)} &= 12.34 \times \frac{100}{1.2 \times 0.90} \times 1 \\ &= 1142.6 \text{ mg/kg} \\ &= 1140 \text{ mg/kg (Reported Result with Signification)} \end{aligned}$$

**H. QA/QC**

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Antimony. Duplicate sample did meet requirements. Serial Dilution did meet requirements.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **Custom Second Source Solution**  
 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                                3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:

B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.033      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

- Starting Material Purity (%):                99.9995
- Starting Material Lot No:                      1814
- Matrix:    2% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

- Certified Concentration:**                    1,001 ± 5 µg/mL -weighted mean-
- Certified Density:**                            1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + U_{char b}^2 + u_{bb}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                      1,001 ± 6 µg/mL - weighted mean

**Certified Density:**                              1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = \frac{2 [(\sum s_i)^2]^{1/2}}{(n)^{1/2}}$$

$\sum s_i$  = The summation of all significant estimated errors

(Most common are the errors from instrumental measurement, weighing, dilution to volume and the fixed error reported on the NIST SRM certificate of analysis)

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 4.1                      **Assay Method #1**                      **1,002 ± 4 µg/mL**  
ICP Assay NIST SRM 3149 Lot Number: 100901
- Assay Method #2**                      **1,000 ± 3 µg/mL**  
Calculated NIST SRM Lot Number: See Sec. 4.2

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**                    **1000 µg/mL Barium in 0.1%(v/v) HNO3**

Catalog Number:                    CGBA1-1, CGBA1-2, and CGBA1-5

Lot Number:                            **F2-BA02076**

Starting Material:                    Ba(NO3)2

Starting Material Purity (%):        99.9998

Starting Material Lot No:            BAE42012A1

Matrix:                                 0.1%(v/v) HNO3

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**            996 ± 5 µg/mL -No weighted mean-

**Certified Density:**                    1.000 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**              1,000 ± 6 µg/mL - weighted mean

**Certified Density:**                        1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**                      **1000 µg/mL Copper in 3% (v/v) HNO<sub>3</sub>**

Catalog Number:                              CGCU1-1, CGCU1-2, and CGCU1-5

Lot Number:                                      **F2-CU02147**

Starting Material:                              Cu shot

Starting Material Purity (%):              100.0000

Starting Material Lot No:                      1718

Matrix:    3% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                      999 ± 5 µg/mL -weighted mean-

**Certified Density:**                              1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

# CERTIFICATE OF ANALYSIS

M3224

## 1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

## 2.0 PRODUCT DESCRIPTION

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

## 3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

### Assay Information:

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

M3225

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105)).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGMG10  
 Lot Number: G2-MG03120  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Magnesium  
 Starting Material: Mg chips  
 Starting Material Lot#: 1484  
 Starting Material Purity: 99.9995%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 9,973 ± 20 µg/mL -weighted mean-  
 Certified Density: 1.053 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	9,955 ± 29 µg/mL ICP Assay NIST SRM 3131a Lot Number: 050302
Assay Method #2	9,986 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Antimony, Sb	100.0 ± 0.8 µg/mL	Arsenic, As	40.01 ± 0.27 µg/mL	Cadmium, Cd	50.03 ± 0.32 µg/mL
Lead, Pb	20.00 ± 0.13 µg/mL	Selenium, Se	50.02 ± 0.33 µg/mL	Thallium, Tl	49.96 ± 0.33 µg/mL

Certified Density: 1.025 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 $n$  = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
[  $\sum (s_i)^2$  ]<sup>1/2</sup> = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **Custom Second Source Solution**  
 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                                3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:

B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.033      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

Catalog No.:                      CHEM-CLP-4

Lot Number:                        **G2-MEB491013**

Matrix:                              3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

1,000 µg/mL ea:

B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 5 µg/mL	Silicon, Si	1,000 ± 7 µg/mL
Tin, Sn	1,001 ± 7 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

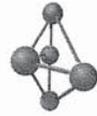

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **1000 µg/mL Sulfur in H2O**

Catalog Number:            CGS1-1, CGS1-2, and CGS1-5

Lot Number:                **G2-S02007**

Starting Material:         H2SO4

Starting Material Purity (%):    100.0000

Starting Material Lot No:    H44F03

Matrix:                      H2O

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**    1,005 ± 5 µg/mL -weighted mean-

**Certified Density:**            1.000 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of  $k = 2$ .

#### Characterization of CRM by two independent methods

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a \& b}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a \& b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{0.5}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{lts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{lts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

- 1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

- 2.0 DESCRIPTION OF CRM**                      **1000 µg/mL Selenium(+4) in 2% (v/v) HNO3**
- Catalog Number:                              CGSE(4)1-1, CGSE(4)1-2, and CGSE(4)1-5
- Lot Number:                                      **E2-SE02033**
- Starting Material:                              Se shot
- Starting Material Purity (%):              99.9996
- Starting Material Lot No:                    1616
- Matrix:    2% (v/v) HNO3

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**              1,001 ± 6 µg/mL - weighted mean

**Certified Density:**                        1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = \frac{2 [(\sum s_i)^2]^{1/2}}{(n)^{1/2}}$$

$\sum s_i$  = The summation of all significant estimated errors

(Most common are the errors from instrumental measurement, weighing, dilution to volume and the fixed error reported on the NIST SRM certificate of analysis)

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 4.1 Assay Method #1**                      **1,002 ± 4 µg/mL**  
ICP Assay NIST SRM 3149 Lot Number: 100901
- Assay Method #2**                      **1,000 ± 3 µg/mL**  
Calculated NIST SRM Lot Number: See Sec. 4.2

R: 011714

m3108

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**      **1000 µg/mL Thallium in 0.7% (v/v) HNO<sub>3</sub>**

Catalog Number:            CGTL1-1, CGTL1-2, and CGTL1-5

Lot Number:                 **F2-TL02003**

Starting Material:         TINO<sub>3</sub>

Starting Material Purity (%):    99.9996

Starting Material Lot No:    1576

Matrix:                      0.7% (v/v) HNO<sub>3</sub>

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**    1,001 ± 5 µg/mL - weighted mean

**Certified Density:**         1.003 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Starting Material:                    Cu shot

Starting Material Purity (%):        100.0000

Starting Material Lot No:            1718

Matrix:                                 3% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**            999 ± 5 µg/mL -weighted mean-

**Certified Density:**                    1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

Standard ID : M3207

Hydrogen Peroxide, 30%  
BAKER ANALYZED® A.C.S. Reagent  
(Stabilized)

Material No.: 2186-03  
Batch No.: 0000064775  
Manufactured Date: 2013/11/26  
Expiration Date: 2015/05/27

M3207.  
Received date 7/13/14  
Exp. date 5/27/15 for 7/13/14.

## Certificate of Analysis

Meets ACS Reagent Chemical Requirements,

Test	Specification	Result
Assay (H <sub>2</sub> O <sub>2</sub> )	30.0 - 32.0 %	31.7
Color (APHA)	<= 10	5
Residue after Evaporation	<= 0.0020 %	0.0002
Titration Acid (meq/g)	<= 0.0006	< 0.0001
Chloride (Cl)	<= 3 ppm	< 1
Nitrate (NO <sub>3</sub> )	<= 2 ppm	< 2
Phosphate (PO <sub>4</sub> )	<= 2 ppm	< 1
ACS - Sulfate (SO <sub>4</sub> )	<= 5 ppm	< 3
Ammonium (NH <sub>4</sub> )	<= 5 ppm	< 3
Trace Impurities - Copper (Cu)	<= 50.0 ppb	< 1.0
Trace Impurities - Iron (Fe)	<= 100.0 ppb	4.1
Heavy Metals (as Pb)	<= 1000 ppb	< 250
Trace Impurities - Lead (Pb)	<= 100.0 ppb	< 10.0
Trace Impurities - Nickel (Ni)	<= 50.0 ppb	< 5.0

For Laboratory, Research or Manufacturing Use  
Meets Reagent Specifications for testing USP/NF monographs

# CERTIFICATE OF ANALYSIS

M3224

## 1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

## 2.0 PRODUCT DESCRIPTION

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

## 3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

### Assay Information:

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

3.0 **CERTIFIED VALUES AND UNCERTAINTIES**

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Antimony, Sb	100.0 ± 0.8 µg/mL	Arsenic, As	40.01 ± 0.27 µg/mL	Cadmium, Cd	50.03 ± 0.32 µg/mL
Lead, Pb	20.00 ± 0.13 µg/mL	Selenium, Se	50.02 ± 0.33 µg/mL	Thallium, Tl	49.96 ± 0.33 µg/mL

**Certified Density:** 1.025 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Certified Value  $(\bar{x}) = \frac{\sum x_i}{n}$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 n = number of measurements

Uncertainty  $(\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

**Cc:** Slizys, Dan; Jarmael Burman; Elaine Stiles; Colleen Walling; Kevin Martin; Sharon Roberson  
**Subject:** Region 03 | Case 44664 | Lab CHEM | SDG MCOAF1 | Issue Non-standard matrix | FINAL

Himanshu,

Issue: Several samples from SDG MCOAF1 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MCOAF8	45.7
MCOAF9	48.1
MCOAG1	43.6
MCOAG2	32.5

Resolution: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5. The laboratory will note the issue in the SDG Narrative.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

WHITLEE DEAN

**Subject:** RE: REGION 3 | SDG MCOAF1 | CASE 44664 | EPW 09038 | ISSUE % SOLIDS | CHEMTECH ORDER ID F3941 |  
**Importance:** High

Hello Whitlee,

We are sending this email with reference to % solids issue for SDG (MCOAF1) & Case (44664).

Some samples from SDG (MCOAF1) have % solids results less than 50% but more than 30%. Please see below table for detail.

EPA Sample ID	% Solids
MCOAF8	45.7

MC0AF9	48.1
MC0AG1	43.6
MC0AG2	32.5

Please advise.

Regards,

**Subject:** Region 03 | Case 44664 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC | FINAL  
**Attachments:** 44673 - Lab COCs.pdf; 44664 - Lab COCs.pdf

Zhaleh,

Issue 1: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Resolution 1: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Issue 2: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

Resolution 2: Per Region 3, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

Could you confirm the sampler's response before I send the Final ROC?

For Issue 1: the case number on the sample tags and label are correct and are for Case 44664.

For Issue 2: per the corrected COC provided by the sampler, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label .

Please let me know if you have any questions.

Thanks!

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

The discrepancy of the case numbers was due to an incorrect case number on the chain of custody. I have attached corrected laboratory copies of the COCs for both RAS 44664 and RAS 44673. I hope this helps to clarify the issue, please let me know if you have additional questions.

Regards,  
 Laura

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Whitlee,

The samples are for case 44673 Mark Fisher as collector. The TR/COC indicates in Station Location column NKWP-WS-11 This could be inorganic sample MC0AJ3.

Laura,

Please have Nancy and Mark try to resolve this issue.

Nancy Shannon is the sample collector for case 44664.

**Subject:** Region 03 | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Good morning Whitlee,

Laboratory received samples for case 44673, however case number on COC, sample tag and label do not match; in addition all CLP sample IDs and tag numbers are missing in sample tags and labels as well.

Please let me know if you have any questions.

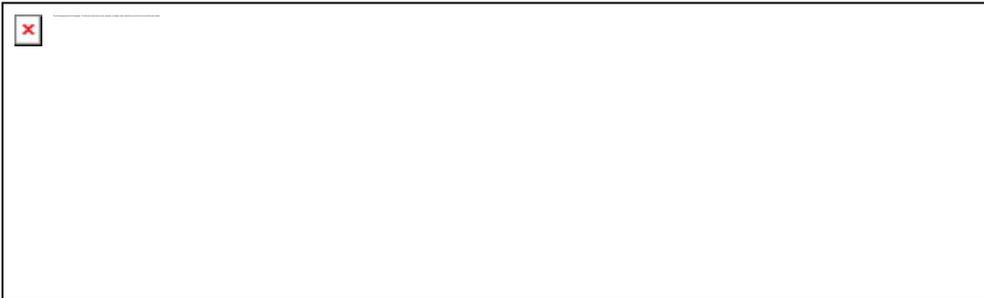

Thanks.

Regards,

Zhaleh Rohani

SUBJECT: Region III Data QA Review

FROM: Brandon McDonald   
Region III ESAT PO (3EA22)

TO: Ruth Scharr  
On-Scene Coordinator (3HS31)

Attached is the inorganic data validation report for the New Kent Wood Preservatives, Inc. site for Case 44664; SDG#:MC0AJ3 completed by the Region III Environmental Services Assistance Team (ESAT), ICF International, contractor under the direction of Region III EAID.

If you have any questions regarding this review, please call me at (410) 305-2607.

**Date:** October 15, 2014

**To:** Brandon McDonald  
ESAT Region 3 Project Officer

**From:** Lisa D. Penix  
Inorganic Data Reviewer

Kurt Roby  
Oversight Chemist

**Subject:** Inorganic Data Validation (S4VEM)  
Site: New Kent Wood Preservative, Inc.  
Case: 44664  
SDG: MC0AJ3

## **OVERVIEW**

Case 44664, Sample Delivery Group (SDG) MC0AJ3, consisted of nineteen (19) sediment samples, including one (1) field duplicate pair, analyzed for total metals by ICP – AES. All samples were analyzed by ChemTech Consulting Group, Inc. (CHEM) according to Contract Laboratory Program (CLP) Statement of Work (SOW) ISM01.3 through the Routine Analytical Services (RAS) program.

## **SUMMARY**

Data were validated according to inorganic National Functional Guidelines utilizing the Environmental Data Exchange and Evaluation System (EXES) and is assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual). Areas of concern with respect to data usability are listed below.

## **MINOR PROBLEMS**

The matrix spike recovery was high (>125%) for chromium (Cr). The post digestion matrix spike recovery was within control limits. Positive results are estimated and have been qualified “J”.

Laboratory instrumentation reported negative values for arsenic (As) greater than the absolute value of the MDL in blank analyses. Positive result reported for these analytes in samples which were less than two times (<2X) the absolute values of the blank concentrations may be biased low and have been qualified “J-”. Quantitation limits for these analytes are estimated and qualified “UJ”.

The ICP interference check standards ISCA and ISCAB reported negative results for potassium (K) greater than the absolute value of the Method Detection Limit (MDL); however, this analyte is not present in these standards. The positive result reported for this analyte in sample MC0AJ3, which was less than ten times (<10X) the absolute value of the interference check standard concentration, is estimated low and has been qualified “J-”. Quantitation limits are estimated and have been qualified “UJ”. Results reported for this analyte attributed to positive blank contamination were not qualified based on this outlier.

## **NOTES**

Analytes detected below CRQLs not attributed to blank contamination are qualified “J”.

Analytes detected below CRQLs attributed to blank contamination are reported at CRQLs and qualified “U” in field samples due to presence of these analytes in associated laboratory blank analyses.

Reported results for the field duplicate pair MC0AK0/MC0AK1 were within 20% Relative Percent Difference (RPD),  $\pm$ CRQL for all analytes except aluminum (Al), calcium (Ca), iron (Fe), lead (Pb) and manganese (Mn). No data were qualified due to field duplicate results.

## **GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)**

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- B The result is presumed a blank contaminant. This qualifier is used only in drinking water samples.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

## Sample Summary Report

Case No: 44664	Contract: EPW09038	SDG No: MC0AJ3	Lab Code: CHEM
Sample Number: LCS	Method: ICP_AES	Matrix: Soil	MA Number: DEFAULT
Sample Location:	pH:	Sample Date: 09/18/2014	Sample Time: 23:41:28
% Moisture :		% Solids : 100	

Analyte Name	Analyte Type	Validation Result	Validation Flag	Units	Lab Result	Lab Flag	Dilution Factor	Reportable	Validation Level
Aluminum	Spike	35.5		mg/kg	35.5		1	Yes	S4VEM
Antimony	Spike	11.0		mg/kg	10.96		1	Yes	S4VEM
Arsenic	Spike	1.5		mg/kg	1.51		1	Yes	S4VEM
Barium	Spike	42.6		mg/kg	42.56		1	Yes	S4VEM
Beryllium	Spike	0.96		mg/kg	0.961		1	Yes	S4VEM
Cadmium	Spike	0.97		mg/kg	0.9715		1	Yes	S4VEM
Chromium	Spike	2.0		mg/kg	2.025		1	Yes	S4VEM
Cobalt	Spike	9.6		mg/kg	9.629		1	Yes	S4VEM
Copper	Spike	5.3		mg/kg	5.25		1	Yes	S4VEM
Iron	Spike	20.5		mg/kg	20.5		1	Yes	S4VEM
Lead	Spike	1.9		mg/kg	1.92		1	Yes	S4VEM
Manganese	Spike	3.2		mg/kg	3.21		1	Yes	S4VEM
Nickel	Spike	7.8		mg/kg	7.75		1	Yes	S4VEM
Selenium	Spike	6.4		mg/kg	6.39		1	Yes	S4VEM
Silver	Spike	1.9		mg/kg	1.897		1	Yes	S4VEM
Thallium	Spike	5.1		mg/kg	5.05		1	Yes	S4VEM
Potassium	Spike	974		mg/kg	974.1		1	Yes	S4VEM
Vanadium	Spike	10.3		mg/kg	10.28		1	Yes	S4VEM
Calcium	Spike	1060		mg/kg	1061.0		1	Yes	S4VEM
Zinc	Spike	11.4		mg/kg	11.4		1	Yes	S4VEM
Sodium	Spike	1000		mg/kg	1003.8		1	Yes	S4VEM
Magnesium	Spike	973		mg/kg	972.8		1	Yes	S4VEM

## SDG NARRATIVE

USEPA  
 SDG # MC0AJ3  
 CASE # 44664  
 CONTRACT # EPW09038  
 LAB NAME: CHEMTECH  
 LAB CODE: CHEM  
 CHEMTECH PROJECT #F3939

### A. Number of Samples and Date of Receipt

19 soil samples were delivered to the laboratory intact on 09/13/2014.

### B. Parameters

Test requested for Metals CLP Full = Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Silver, Selenium, Sodium, Thallium, Vanadium, Zinc.

### C. Cooler Temp

Indicator Bottle: Presence/Absence  
 Cooler: 5°C

### D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: Several samples from SDG MC0AJ3 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MC0AJ4	42.3
MC0AK6	44.2

Issue 2: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Issue 3: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

**CHEMTECH**  
**284 Sheffield Street**  
**Mountainside, NJ 07092**

**E. Corrective Action taken for above:**

Resolution 1: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5. The laboratory will note the issue in the SDG Narrative.

Resolution 2: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Resolution 3: Per Region 3, MC0AJ3 is for Case 44664. The station location and collection time for sample MC0AJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

**F. Analytical Techniques:**

All analyses were based on CLP Methodology by method ISM01.3

**G. Calculation:**

*Calculation for ICP-AES Soil Sample:*

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

$$\text{Concentration (mg/kg)} = \frac{C \times V_f \times DF}{W \times S}$$

Where,

C = Instrument value in ppm (The average of all replicate exposures)

V<sub>f</sub> = Final digestion volume (mL)

W = Initial aliquot amount (g) (Sample amount taken in prep)

S = % Solids / 100 (Fraction of Percent Solids)

DF = Dilution Factor

**Example Calculation:**

If C = 12.34 ppm

V<sub>f</sub> = 100 ml

W = 1.20 g

**CHEMTECH****284 Sheffield Street****Mountainside, NJ 07092**

S = 0.90 (90/100)

DF = 1

$$\begin{aligned} \text{Concentration (mg/kg)} &= 12.34 \times \frac{100}{1.2 \times 0.90} \times 1 \\ &= 1142.6 \text{ mg/kg} \\ &= 1140 \text{ mg/kg (Reported Result with Signification)} \end{aligned}$$

**H. QA/QC**

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Chromium. Duplicate sample did meet requirements. Serial Dilution did meet requirements.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **Custom Second Source Solution**  
 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                              3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:

B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.033      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

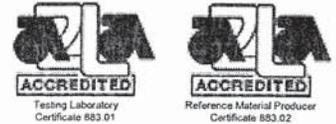

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

(  $\bar{x}$  ) = mean  
 $x_i$  = individual results  
 n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

- Catalog Number:                              CGAS1-1, CGAS1-2, and CGAS1-5
- Lot Number:                                      **G2-AS02102**
- Starting Material:                              As Lump
- Starting Material Purity (%):                99.9995
- Starting Material Lot No:                      1814
- Matrix:    2% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

- Certified Concentration:**                    1,001 ± 5 µg/mL -weighted mean-
- Certified Density:**                            1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a+b}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a+b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{1/2}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

2.0 **DESCRIPTION OF CRM**      **1000 µg/mL Sulfur in H2O**

Catalog Number:            CGS1-1, CGS1-2, and CGS1-5

Lot Number:                **G2-S02007**

Starting Material:         H2SO4

Starting Material Purity (%):    100.0000

Starting Material Lot No:    H44F03

Matrix:                      H2O

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**    1,005 ± 5 µg/mL -weighted mean-

**Certified Density:**            1.000 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of  $k = 2$ .

#### Characterization of CRM by two independent methods

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a \& b}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a \& b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{0.5}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{lts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume;  $k$ , coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{lts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**              1,001 ± 6 µg/mL - weighted mean

**Certified Density:**                        1.011 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = \frac{2 [(\sum s_i)^2]^{1/2}}{(n)^{1/2}}$$

$\sum s_i$  = The summation of all significant estimated errors

(Most common are the errors from instrumental measurement, weighing, dilution to volume and the fixed error reported on the NIST SRM certificate of analysis)

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

- 4.1 Assay Method #1**                      **1,002 ± 4 µg/mL**  
 ICP Assay NIST SRM 3149 Lot Number: 100901
- Assay Method #2**                      **1,000 ± 3 µg/mL**  
 Calculated NIST SRM Lot Number: See Sec. 4.2

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

R: 011714

m3108

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**      **1000 µg/mL Thallium in 0.7% (v/v) HNO<sub>3</sub>**

Catalog Number:      CGTL1-1, CGTL1-2, and CGTL1-5  
 Lot Number:            **F2-TL02003**  
 Starting Material:      TINO<sub>3</sub>  
 Starting Material Purity (%):    99.9996  
 Starting Material Lot No:    1576  
 Matrix:                    0.7% (v/v) HNO<sub>3</sub>

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**    1,001 ± 5 µg/mL - weighted mean

**Certified Density:**            1.003 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

M3118

- 1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

- 2.0 **DESCRIPTION OF CRM**      **10000 µg/mL Potassium in 2% (v/v) HNO<sub>3</sub>**
- Catalog Number:            CGK10-1, CGK10-2, and CGK10-5
- Lot Number:                **F2-K03033**
- Starting Material:         KNO<sub>3</sub>
- Starting Material Purity (%):    99.9995
- Starting Material Lot No:    1727
- Matrix:                      2% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**    10,022 ± 60 µg/mL - weighted mean

**Certified Density:**            1.025 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

M3156 TO M3160

**1.0** **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0** **DESCRIPTION OF CRM**      **10000 µg/mL Indium in 5% (v/v) HNO<sub>3</sub>**

Catalog Number:                    CGIN10-1, CGIN10-2, and CGIN10-5

Lot Number:                            **F2-IN01095**

Starting Material:                    In shot

Starting Material Purity (%):      99.9998

Starting Material Lot No:          1775, 1777

Matrix:                                  5% (v/v) HNO<sub>3</sub>

**3.0** **CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**      10,050 ± 51 µg/mL -weighted mean-

**Certified Density:**                1.033 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0** **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

M3185

R: 05/08/14

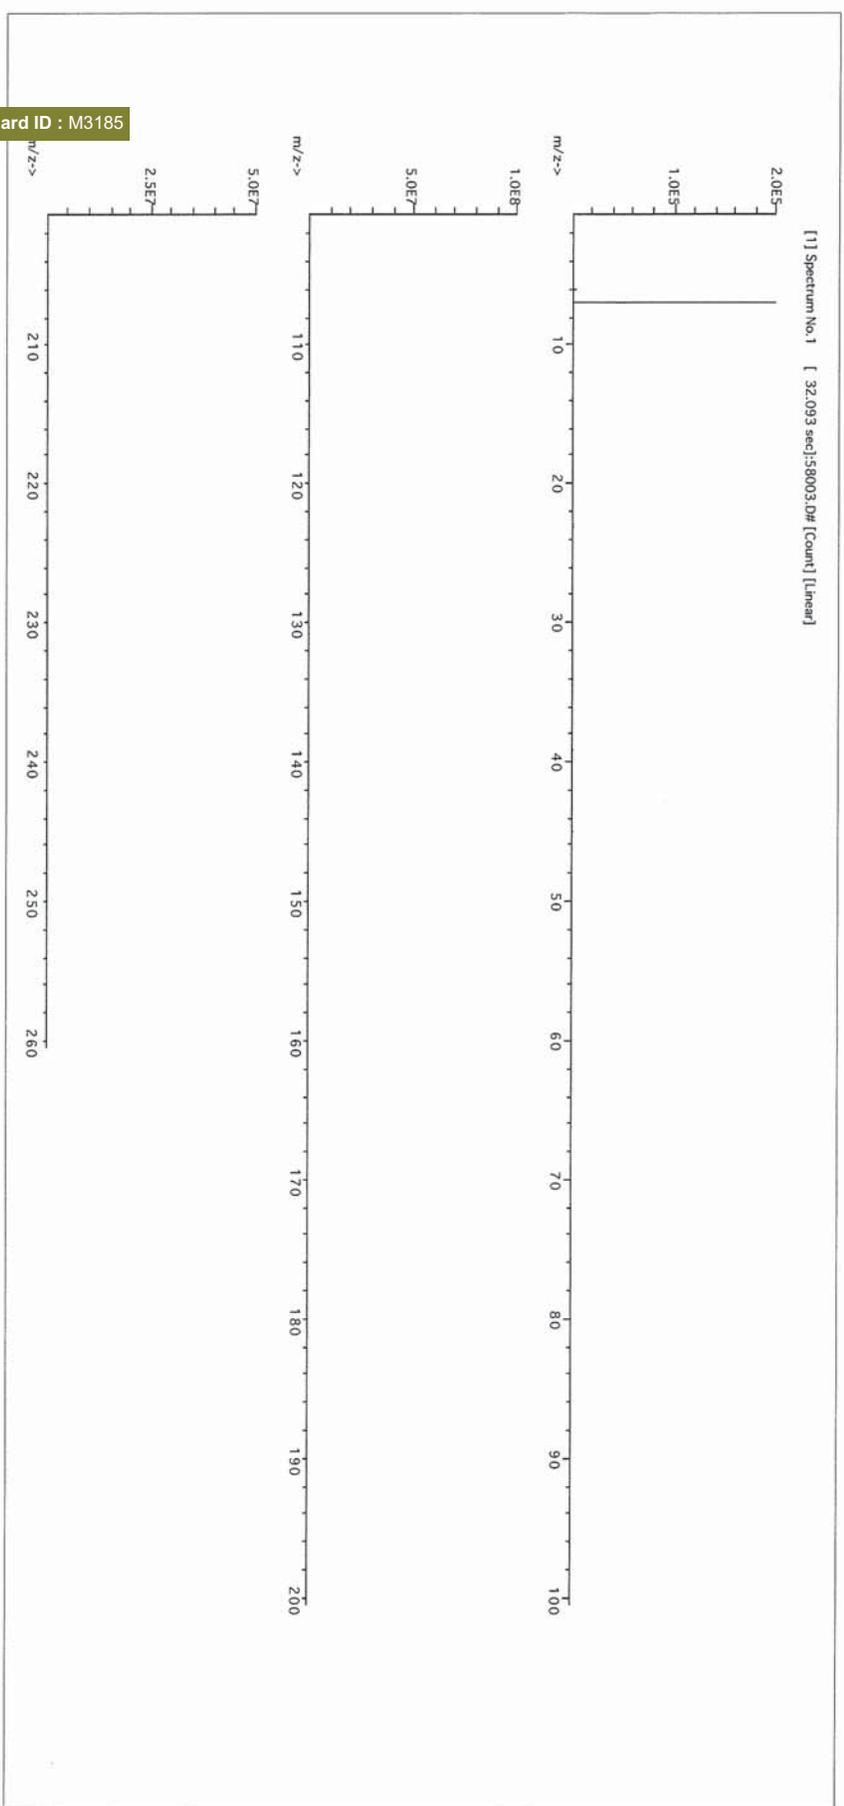

**CERTIFIED WEIGHT REPORT:**

CERTIFICATE OF ANALYSIS

M3224

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

 Certified Density: 1.053 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	9,955 ± 29 µg/mL ICP Assay NIST SRM 3131a Lot Number: 050302
Assay Method #2	9,986 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Antimony, Sb	100.0 ± 0.8 µg/mL	Arsenic, As	40.01 ± 0.27 µg/mL	Cadmium, Cd	50.03 ± 0.32 µg/mL
Lead, Pb	20.00 ± 0.13 µg/mL	Selenium, Se	50.02 ± 0.33 µg/mL	Thallium, Tl	49.96 ± 0.33 µg/mL

**Certified Density:** 1.025 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 $n$  = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
[  $\sum (s_i)^2$  ]<sup>1/2</sup> = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **Custom Second Source Solution**  
 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                              3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:  
 B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:** 1.033 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **10000 µg/mL Yttrium in 2% (v/v) HNO<sub>3</sub>**

Catalog Number:                    CGY10-1, CGY10-2, and CGY10-5

Lot Number:                         **F2-Y02004**

Starting Material:                 Y2O<sub>3</sub>

Starting Material Purity (%):    99.9999

Starting Material Lot No:        0623052

Matrix:                                2% (v/v) HNO<sub>3</sub>

3.0 **CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**      10,006 ± 53 µg/mL - weighted mean

**Certified Density:**              1.034 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                    1,001 ± 5 µg/mL -weighted mean-

**Certified Density:**                            1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a+b}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a+b} = [(w_a)^2 (U_{char a})^2 + (w_b)^2 (U_{char b})^2]^{1/2}$ ;  $U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**                      **1000 µg/mL Barium in 0.1%(v/v) HNO3**

Catalog Number:                      CGBA1-1, CGBA1-2, and CGBA1-5  
 Lot Number:                              **F2-BA02076**  
 Starting Material:                      Ba(NO3)2  
 Starting Material Purity (%):        99.9998  
 Starting Material Lot No:              BAE42012A1  
 Matrix:                                      0.1%(v/v) HNO3

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**            996 ± 5 µg/mL -No weighted mean-

**Certified Density:**                    1.000 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

**1.0 INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

**2.0 DESCRIPTION OF CRM**      **1000 µg/mL Cobalt in 3% (v/v) HNO<sub>3</sub>**

Catalog Number:                    CGCO1-1, CGCO1-2, and CGCO1-5

Lot Number:                         **F2-CO02052**

Starting Material:                  Co powder

Starting Material Purity (%):    99.9982

Starting Material Lot No:        1749

Matrix:                                3% (v/v) HNO<sub>3</sub>

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**      1,003 ± 5 µg/mL - weighted mean

**Certified Density:**              1.018 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

R.0117114

m3124

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**                      **1000 µg/mL Copper in 3% (v/v) HNO<sub>3</sub>**

Catalog Number:                      CGCU1-1, CGCU1-2, and CGCU1-5

Lot Number:                              **F2-CU02147**

Starting Material:                      Cu shot

Starting Material Purity (%):        100.0000

Starting Material Lot No:              1718

Matrix:                                    3% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**              999 ± 5 µg/mL -weighted mean-

**Certified Density:**                      1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

## CERTIFICATE OF ANALYSIS

M3224

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

## CERTIFICATE OF ANALYSIS

M3225

**1.0 ACCREDITATION / REGISTRATION**

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105)).

**2.0 PRODUCT DESCRIPTION**

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGMG10  
 Lot Number: G2-MG03120  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Magnesium  
 Starting Material: Mg chips  
 Starting Material Lot#: 1484  
 Starting Material Purity: 99.9995%

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

Certified Value: 9,973 ± 20 µg/mL -weighted mean-  
 Certified Density: 1.053 g/mL (measured at 20 ± 1 °C)

**Assay Information:**

Assay Method #1	9,955 ± 29 µg/mL ICP Assay NIST SRM 3131a Lot Number: 050302
Assay Method #2	9,986 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Antimony, Sb	100.0 ± 0.8 µg/mL	Arsenic, As	40.01 ± 0.27 µg/mL	Cadmium, Cd	50.03 ± 0.32 µg/mL
Lead, Pb	20.00 ± 0.13 µg/mL	Selenium, Se	50.02 ± 0.33 µg/mL	Thallium, Tl	49.96 ± 0.33 µg/mL

**Certified Density:** 1.025 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

1.0 **INORGANIC VENTURES** is an ISO Guide 34 "General Requirements for the Competence of Reference Material Producers" and ISO 9001 registered manufacturer. Our manufacturing laboratory is accredited to ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories."

2.0 **DESCRIPTION OF CRM**      **Custom Second Source Solution**  
 Catalog No.:                      CHEM-QC-4  
 Lot Number:                        **F2-MEB452072**  
 Matrix:                                3% HNO<sub>3</sub>(v/v),                      2.7% HF(v/v)

**Second Source:** Whenever possible, this solution was manufactured from a second set of concentrates in our manufacturing facility.

1,000 µg/mL ea:  
 B,                      Mo,                      Si,                      Sn,                      Ti

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 6 µg/mL	Silicon, Si	1,000 ± 5 µg/mL
Tin, Sn	1,000 ± 5 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:** 1.033 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

3.0 **CERTIFIED VALUES AND UNCERTAINTIES**

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Boron, B	1,000 ± 7 µg/mL	Molybdenum, Mo	1,000 ± 5 µg/mL	Silicon, Si	1,000 ± 7 µg/mL
Tin, Sn	1,001 ± 7 µg/mL	Titanium, Ti	1,000 ± 7 µg/mL		

**Certified Density:**      1.035      g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 **TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Starting Material:                    Y2O<sub>3</sub>

Starting Material Purity (%):      99.9999

Starting Material Lot No:          0623052

Matrix:                                    2% (v/v) HNO<sub>3</sub>

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**      10,006 ± 53 µg/mL - weighted mean

**Certified Density:**                1.034 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Instructions for QATS Reference Material: ICP-AES ICS

interferent elements: Al, Ca, Fe, and Mg. The ICSB solution contains the analytes: Ag, As, Sb, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, Tl, Se, V, and Zn. This instruction sheet provides the nominal values for ICP-AES Part A and Part B target analytes when diluted as directed.

Using Class "A" glassware, preparation and analysis must be performed according to the following instructions:

**ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSA solution by ICP-AES.

**ICSB-0710, Analytes, mixed with ICSA-1211, Interferents:** Pipet 10 mL of the ICSA solution and 10 mL of the ICSB solution into a 100 mL volumetric flask and dilute to volume with 2% v/v HNO<sub>3</sub>. Analyze this ICSAB solution by ICP-AES.

(D) "CERTIFIED VALUE" CONCENTRATIONS OF QATS ICP-AES ICS SOLUTION(S)

The "Certified Value" concentrations of the elements, listed in Table 1 below, were derived from statistically pooled analysis results from the following sources, if available: QATS Laboratory, CLP laboratories, Quarterly Blind (QB) events, CLP pre-award events, and external referee laboratories.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

**Certified Concentration:**                  1,001 ± 5 µg/mL -weighted mean-

**Certified Density:**                            1.012 (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence interval using a coverage factor of k = 2.

#### Characterization of CRM by two independent methods

Certified Value,  $X_{CRM}$ , where two methods of characterization are used, is the weighted mean of the two results =  $[(w_a)(X_a) + (w_b)(X_b)]$

$X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$X_b$  is the mean of Assay Method B with standard uncertainty  $U_{char b}$ .

$w_a$  and  $w_b$  = The weighting factors for each method calculated using the inverse square of the variance:

$$w_a = (1/U_{char a})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2);$$

$$w_b = (1/U_{char b})^2 / ((1/U_{char a})^2 + (1/U_{char b})^2)$$

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + U_{char b}^2 + u_{bb}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  and  $U_{char b}$  are the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

#### Characterization of CRM by one method

Certified Value,  $X_{CRM}$ , where one method of characterization is used, is the mean of individual results:

$X_a$  = Mean  $X_a$  is the mean of Assay Method A with standard uncertainty  $U_{char a}$ .

$$CRM \text{ Expanded Uncertainty } (\pm) = U_{CRM} = k (U_{char a}^2 + u_{bb}^2 + u_{sts}^2)^{1/2}$$

$U_{char a}$  is the square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume; k, coverage factor = 2 in all cases at Inorganic Ventures;  $u_{bb}$  = bottle to bottle homogeneity standard uncertainty;  $u_{sts}$  = long term stability standard uncertainty (storage);  $u_{sts}$  = short term stability standard uncertainty (transportation).

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

### 4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

· "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)

· This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

Catalog Number:                      CGCU1-1, CGCU1-2, and CGCU1-5

Lot Number:                                **F2-CU02147**

Starting Material:                      Cu shot

Starting Material Purity (%):        100.0000

Starting Material Lot No:              1718

Matrix:                                        3% (v/v) HNO<sub>3</sub>

**3.0 CERTIFIED VALUES AND UNCERTAINTIES**

**Certified Concentration:**              999 ± 5 µg/mL -weighted mean-

**Certified Density:**                        1.016 g/mL (measured at 20 ± 1°C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 \left[ \sum (s_i)^2 \right]^{1/2}$$

2 = the coverage factor.

$\left[ \sum (s_i)^2 \right]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS**

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

2.0 DESCRIPTION OF CRM Stock Solution  
 Catalog No.: CLPP-CAL-3  
 Lot Number: G2-MEB467069  
 Matrix: 7% HNO3(v/v)

1,000 µg/mL ea:  
 As, Pb, Se, Tl,  
 500 µg/mL ea:  
 Cd

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Arsenic, As	1,000 ± 7 µg/mL	Cadmium, Cd	500.0 ± 3.2 µg/mL	Lead, Pb	1,000 ± 7 µg/mL
Selenium, Se	1,000 ± 7 µg/mL	Thallium, Tl	1,000 ± 7 µg/mL		

Certified Density: 1.043 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean  
 $x_i$  = individual results  
 n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.  
 $[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

4.0 TRACEABILITY TO NIST AND VALUES OBTAINED BY INDEPENDENT METHODS

- "Property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties." (ISO VIM, 2nd ed., 1993, definition 6.10)
- This product is Traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRMs are available, the term 'in-house std.' is specified.
- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a NIST SRM/RM. See section 4.2 for balance traceability.

# CERTIFICATE OF ANALYSIS

M3224

## 1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO Guide 34, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (SAI Global File Number (010105).

## 2.0 PRODUCT DESCRIPTION

Product Code: Single Analyte Custom Grade Solution  
 Catalog Number: CGCA10  
 Lot Number: G2-CA04095  
 Matrix: 2% (v/v) HNO<sub>3</sub>  
 Value/Analyte(s): 10,000 µg/mL Calcium  
 Starting Material: CaO  
 Starting Material Lot#: Multiple Lots  
 Starting Material Purity: 99.9990%

## 3.0 CERTIFIED VALUES AND UNCERTAINTIES

Certified Value: 10,027 ± 23 µg/mL weighted mean  
 Certified Density: 1.040 g/mL (measured at 20 ± 1 °C)

### Assay Information:

Assay Method #1	10031 ± 41 µg/mL ICP Assay NIST SRM 3109a Lot Number: 050825
Assay Method #2	10025 ± 25 µg/mL EDTA NIST SRM 928 Lot Number: 928

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

### 3.0 CERTIFIED VALUES AND UNCERTAINTIES

ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE	ELEMENT	CERTIFIED VALUE
Antimony, Sb	100.0 ± 0.8 µg/mL	Arsenic, As	40.01 ± 0.27 µg/mL	Cadmium, Cd	50.03 ± 0.32 µg/mL
Lead, Pb	20.00 ± 0.13 µg/mL	Selenium, Se	50.02 ± 0.33 µg/mL	Thallium, Tl	49.96 ± 0.33 µg/mL

**Certified Density:** 1.025 g/mL (measured at 20 ± 1° C)

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

$$\text{Certified Value } (\bar{x}) = \frac{\sum x_i}{n}$$

( $\bar{x}$ ) = mean

$x_i$  = individual results

n = number of measurements

$$\text{Uncertainty } (\pm) = 2 [ \sum (s_i)^2 ]^{1/2}$$

2 = the coverage factor.

$[ \sum (s_i)^2 ]^{1/2}$  = The square root of the sum of the squares of the most common errors (where 's' stands for the standard deviation) from instrumental measurement, density, NIST SRM uncertainty, weighing, dilution to volume, homogeneity, long term stability and short term stability.

**After printing this label:**

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

**Warning:** Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

**Subject:** Region 03 | Case 44664 | Lab CHEM | SDG MC0AJ3 | Issue Non-standard matrix | FINAL

Himanshu,

Issue: Several samples from SDG MC0AJ3 have % solids results less than 50% but more than 30%.

EPA Sample ID	% Solids
MCOAJ4	42.3
MCOAK6	44.2

Resolution: Per the ISM01.3 SOW, the laboratory will proceed with the analysis of the samples according to Exhibit D, sections 1.6.4 and 1.6.5. The laboratory will note the issue in the SDG Narrative.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

**Importance:** High

Hello Whitlee,

We are sending this email with reference to % solids issue for SDG (MC0AJ3) & Case (44664).

Some samples from SDG (MC0AJ3) have % solids results less than 50% but more than 30%. Please see below table for detail.

EPA Sample ID	% Solids
MCOAJ4	42.3
MCOAK6	44.2

Please advise.

**Subject:** Region 03 | Case 44664 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC | FINAL  
**Attachments:** 44673 - Lab COCs.pdf; 44664 - Lab COCs.pdf

Zhaleh,

Issue 1: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Resolution 1: Per Region 3, the Case number on the sample tag and label are correct. The sample is for Case 44664. The COC contained an incorrect case number. The correct COC is attached for Case 44664 and Case 44673. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Issue 2: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

Resolution 2: Per Region 3, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label per the attached corrected COC. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Please let me know if you have any questions or problems. To waive any defect(s) associated with this issue, please contact your PO.

Thanks,

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

Could you confirm the sampler's response before I send the Final ROC?

For Issue 1: the case number on the sample tags and label are correct and are for Case 44664.

For Issue 2: per the corrected COC provided by the sampler, MCOAJ3 is for Case 44664. The station location and collection time for sample MCOAJ3 match the sample tag and label .

Please let me know if you have any questions.

Thanks!

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Dan,

The discrepancy of the case numbers was due to an incorrect case number on the chain of custody. I have attached corrected laboratory copies of the COCs for both RAS 44664 and RAS 44673. I hope this helps to clarify the issue, please let me know if you have additional questions.

Regards,  
 Laura

**Subject:** RE: NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Whitlee,

The samples are for case 44673 Mark Fisher as collector. The TR/COC indicates in Station Location column NKWP-WS-11 This could be inorganic sample MC0AJ3.

Laura,

Please have Nancy and Mark try to resolve this issue.

Nancy Shannon is the sample collector for case 44664.

**Subject:** NEW ISSUE | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Good Morning,

CHEM is reporting the following issues. Please advise as to how the laboratory should proceed.

Issue 1: The laboratory received samples for Case 44673. The case number on the COC (attached), sample tag and label (attached) do not match.

Issue 2: The sample IDs and tag numbers are missing from the sample tags and labels. The station location is listed in place of the sample number on both the sample tag and label.

Please let me know if you have any questions.

Thanks,

WHITLEE DEAN

**Subject:** Region 03 | Case 44673 | Lab CHEM | Issue Discrepancies with tags, jars, and/or COC

Good morning Whitlee,

Laboratory received samples for case 44673, however case number on COC, sample tag and label do not match; in addition all CLP sample IDs and tag numbers are missing in sample tags and labels as well.

Please let me know if you have any questions.

Thanks.

Regards,

Zhaleh Rohani
