Attachments: EPA Factory Street Data.xlsx

Hi Amanda and Yolanda,

It was great meeting you both today! I've attached a deidentified data sheet of all of the children in our database (surveillance began in 2003 to today 5/29/2019) with residential addresses on Factory Street, Gulick Avenue, or Waterhouse Street. Child 1028 had two EBLs in 2016 and 2017. Child 1026 with a BLL of 4.8 ug/dL is the younger sibling of 1028. Child 1000 had a BLL of 4.5 ug/dL in late 2018. There are no children with residential addresses on Waterhouse Street in our database, which could suggest a lack of blood lead testing for individuals in that area.

As I mentioned today, the Hawaii Childhood Lead Poisoning Prevention Program (HI-CLPPP) has a lot of great outreach material on our website lead.hawaii.gov. I look forward to collaborating on further outreach strategies!

Thanks,

Kelly Hoffman
