---

March 2013

To Racine County Citizens:

This Hazardous Materials Plan has been developed by the Racine County Local Emergency Planning Committee and the Racine County Office of Emergency Management to provide a detailed plan of action for incidents involving hazardous materials. This plan is mandated by the Federal Superfund Amendments and Reauthorization Act of 1986 and complies with all State and Federal guidelines.

Although it is my hope that we never have to implement this plan, it is a fact that chemicals are used in every aspect of our lives and that a risk exists. I am confident that those who use this plan will minimize the loss of life and property damage due to the release of hazardous materials.

This plan, upon adoption, supersedes all other Racine County plans for response to a hazardous materials incident.

Approved this 4<sup>th</sup> day of March, 2013.

  
James A. Ladwig  
Racine County Executive

### FOREWORD

To the Reader:

As a result of the tragedy in Bhopal, India and the near tragedy in Institute, West Virginia, the United States Congress passed the Superfund Amendments and Reauthorization Act of 1986, otherwise known as SARA Title III. This legislation was far reaching and has affected both industry and government alike.

The Racine County Local Emergency Planning Committee has been at the forefront of this issue and a former member was influential in shaping the current law. We pride ourselves on our planning and training initiatives and our interaction with local industry. Implementing this legislation has not been an easy task, but through cooperative efforts it has been made much easier.

As the Chairman of the Racine County Local Emergency Planning Committee, I see the importance of having a good Hazardous Materials Plan. Thousands of chemicals are transported over I-94 every day and many businesses routinely use chemicals. When used properly, they pose little threat; but in the event of an accident, the effect can be devastating.

Although I hope that this plan is never called into play, I am confident that all members of the emergency management team will be able to use it to minimize any loss of lives or property damage that could occur from a release of hazardous materials.

Respectfully submitted,

ROBERT BAGLEY, CHAIRMAN  
RACINE COUNTY LOCAL EMERGENCY PLANNING COMMITTEE

## **I. INTRODUCTION**

Public Law 99-499, the Superfund Amendments and Reauthorization Act of 1986 (SARA/Title III) was enacted into law on October 17, 1986. This far-reaching legislation was passed as a direct result of the Union Carbide accident in Bhopal, India where over 3000 people lost their lives, and the near tragedy in Institute, West Virginia where a similar accident injured over 300 people.

This law impacts both the private and public sector and requires those who use, store or produce chemicals to submit an annual chemical inventory form to the State Emergency Response Board, Local Emergency Planning Committee and the local fire department. In addition, facilities are required to provide information and assist the Local Emergency Planning Committee with the development of Off-Site Facility Plans which become appendices to the Racine County Hazardous Materials Plan.

The Racine County Hazardous Materials Plan will become a supporting annex to the Racine County Emergency Operations Plan. This plan defines the roles, responsibilities, and inter/intra-organizational relations of government and private organizations in response to a hazardous materials incident.

## **II. CONCEPT OF OPERATIONS**

The following section will explain the theory, policies and organizational structures of Racine County's Emergency Operations Plan and Organization, and the specifics of how the organization should respond to a hazardous materials incident. One priority will be to define the role and responsibilities of all members of the Local Emergency Planning Committee, Emergency Management Organization, and fixed facilities before, during and after any hazardous materials incident in Racine County.

Following the guidance of the Federal Emergency Management Agency's integrated emergency management system (IEMS), each organization or entity named in the concept of operations will have responsibilities during the four phases of operations:

<b>MITIGATION</b>	-those efforts before or after an accident to insure the prevention of a recurrence of a similar accident or the lessening of its effects in the future.
<b>PREPAREDNESS</b>	-the establishment of policies and procedures that ensure a competent capability to respond to a potential accident, including the training, informing, and exercising of all participants (including industry and the public).
<b>RESPONSE</b>	-following the occurrence of an accident, those functions, responsibilities, and reactions that will save lives, reduce damage to property, and bring the accident under control.
<b>RECOVERY</b>	-a pre-planned effort by the emergency management organization of the county and its municipalities to work with local, state, federal and private agencies to restore the citizens, industry, and the environment to the state of normalcy enjoyed prior to the accident.

## A. LEGAL AUTHORITY AND REFERENCES

1. Public Law 99-499, the Superfund Amendment and Reauthorization Act (SARA/Title III of 1986) - an act passed by the U.S. Congress to insure that local, state, federal and industry responders will have proper information on what chemicals are contained at an industrial facility, the types of health risks posed by those chemicals, and the actions needed to mitigate such an accident.
2. Public Law 103-337 reenacts the Federal Civil Defense Act and all its authorities into the Robert T. Stafford Disaster Relief and Assistance Act now known as the National Defense Authorization Act for 1995. The Federal Civil Defense Act mandated the national civil defense program and required planning for enemy attack, assigning joint responsibilities to the federal government, the states and all political subdivisions throughout the United States. The act establishes the framework for the County Emergency Management Organization. The Disaster Relief Act authorized federal subsidy monies be passed down to state and local governments to be used for all natural and man-made disasters, as well as nuclear or enemy attack. The act also mandated that all state and local governments have an “all hazard” disaster plan that would be consistent with the federal program.
3. Wisconsin Act 342 of 1987 was passed by the Wisconsin State Legislature and signed by the Governor on April 21, 1988, and adopts all provisions of Public Law 99-499, SARA/Title III, for hazardous materials planning. The law also provides a statewide funding mechanism to reimburse LEPC’s for expenses generated due to requirements of the law.
4. Wisconsin Act 256 of 1989 allows LEPC’s to seek reimbursement for costs related to hazmat response.
5. Wisconsin Act 104 of 1991 established 7-11 Regional Response Teams to provide hazmat response.
6. State Statutes Chapter 323 requires the governing body of each county, town and municipality in Wisconsin to adopt an effective “all hazard” program of emergency government consistent with the State plan, and empowers municipalities to appropriate funds and levy taxes for such a program. It also enumerates the powers and duties of the Governor, Adjutant General, and of counties, municipalities and their representatives. The law also establishes emergency government authorities.
7. Chapter 6 of the Racine County Code of Ordinances is a county ordinance established to comply with State Statute 323 in setting up an emergency government program and developing an emergency and disaster management organization to deal with all hazards, including natural and man-made as well as enemy attack.

8. Chapter 9.02 of the City of Racine Code of Ordinances which prohibits discharges and gives the Coordinator of Emergency Management or his deputies the authority to issue citations or complaints.
10. Municipal Joint Action Ordinances which recognizes the county's emergency management coordinator as the primary disaster planner in Racine County. The municipalities pledged their support to work with the county in all planning, testing, exercising, training, response and recovery operations to insure that a credible all-hazard emergency management and disaster response capability exists in Racine County.
11. Other Applicable Legislation:
  - a. The Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA) commonly known as Superfund. CERCLA provides authority for federal cleanup of sites where hazardous materials have been deposited or released, and for response to releases of hazardous substances or other contaminants.
  - b. Occupational Safety and Health Act (OSHA) of 1974 requires employers handling certain hazardous materials to prepare and have available Material Safety Data Sheets (MSDS) that describes the properties and health risks of those chemicals used at a facility.
  - c. OSHA Hazard Communication Standard of 1983 included requirements for information disclosures to employees -employee right-to-know.
  - d. Sec. 144.76, Wisconsin Statutes, commonly known as the State Hazardous Substance Spill Law, establishes the Department of Natural Resources (DNR) as the primary state agency to deal with hazardous material spills; mandates that all spills of chemical substances in Wisconsin be reported to a 24-hour hotline (1-800-943-0003); and determines that the spiller of any hazardous chemical substance is responsible for the costs of clean up of that substance.

## **B. RACINE COUNTY EMERGENCY MANAGEMENT ORGANIZATION**

As detailed in the Racine County Emergency Operations Plan (EOP), the County Executive is the head of all emergency management activities before, during, and after a major disaster. The responsibility for carrying out day-to-day planning and training activities are delegated by the County Executive to the Emergency Management Coordinator who works with all departments and agencies throughout the county, both public and private, to insure that an effective emergency management program is developed and maintained.

During any response to an actual disaster, the Emergency Management Coordinator will serve as the Chief of Staff to the County Executive, functioning either in the Racine County Emergency Operating Center (EOC), located in the Law Enforcement Center, 717 Wisconsin Avenue, Racine; or in the field. The Emergency Management Coordinator or Deputy Coordinator will be

the chief technical advisor and official liaison on behalf of the County Executive and Emergency Management Organization with state, federal and private agencies needed to assist.

## **1. EMERGENCY MANAGEMENT ORGANIZATION**

### **a. Emergency Management Group**

**Coordinator:** County Executive

**Other Members:** County Emergency Management Coordinator, City of Racine Mayor, all Town Chairmen, Village Presidents, and the County Public Information Officer.

#### **Primary Tasks:**

- Oversee development and maintaining of necessary emergency plans and programs as required by state and federal rules and regulations.
- Develop public and internal education programs to promote the county's emergency plans.
- Develop and maintain warning and communications systems needed to disseminate emergency information to residents.
- Make overall policy decisions during actual disasters or emergency situations relating to public health and safety.

### **b. Law Enforcement Group**

**Coordinator:** County Sheriff

**Other Members:** City, Town and Village Police Chiefs

#### **Primary Tasks:**

- Provide security, perimeter and traffic control at disaster and emergency scenes. Conduct evacuation of residents when required.
- Provide investigation and documentation at disaster and emergency incident scenes (including photo and video, if necessary).
- Provide security at public shelters.
- Assist in incident command post operations.
- Conduct light rescue, search and rescue, and assist in heavy rescue as necessary.
- Participate in planning, training, exercising, communications, warning, damage assessment, and other functions as required.

### **c. Fire Services Group**

**Coordinators:** City of Racine Fire Chief

**Other Members:** All fire departments in Racine County.

#### **Primary Tasks:**

- Provide fire suppression; hazardous materials pre-planning and response.
- Assist law enforcement with evacuation where feasible.
- Provide field incident command for fire, explosion and hazardous materials incidents.

- Participate in planning, training, exercising, communications, warning, damage assessment and other functions as required.
- Assist in light rescue and search and rescue as requested.
- Conduct heavy rescue operations in the event of collapsed or damaged building.

**d. Pubic Works/Engineering Group**

**Coordinators:** County Public Works Director.

**Other Members:** All municipal Public Works Directors, Wisconsin, Racine Water and Wastewater Utility, and Water Treatment or Sewage Treatment plant directors/managers.

**Primary Tasks:**

- Restore, maintain and operate essential facilities.
- Clear and dispose of debris as necessary from roads, bridges, parks and other critical facilities.
- Supervise all sandbagging and flood fighting operations.
- Coordinate the continued operation and/or restoration of electric, gas, water and sewer utilities.
- Coordinate re-direction of services as required.
- Participate in planning, training, exercising, communications, warning, damage assessment and other functions as required.
- Assist law enforcement groups as necessary in providing perimeter control for disaster/emergency scenes by providing barricades and manpower as necessary.
- Assist law enforcement during evacuation by providing signage, barricades and manpower as necessary.
- Assist fire department during hazardous materials operations with sand, sandbags or other absorbent material as required.
- Assist law enforcement, fire and medical groups as necessary with heavy equipment resources.

**e. Human Services Group**

**Coordinator:** County Human Services Director.

**Other Members:** American Red Cross-Lakeshore Counties Chapter and the Salvation Army.

**Primary Tasks:**

- Assess mass care needs and housing requirements for disaster victims.
- Provide shelter, food, clothing, and registration for impacted persons.
- Manage and operate evacuation shelters, reception centers and mass care centers, including fallout shelters, if necessary.
- Provide locator services in handling of disaster welfare inquiries.
- Provide for financial assistance, rehabilitation and emotional, psychological and spiritual counseling where necessary.
- Provide specialized services as required for special need population groups.

- Participate in planning, training, exercising, communications, warning, damage assessment, and other functions as required.

**f. Health/Medical Group**

**Coordinator:** Racine County Health Officer.

**Other Members:** Racine County Public Health Providers, County Fire and Rescue Coordinator, Medical Examiner and area hospitals.

**Primary Tasks:**

- Organize medical care and treatment for ill or injured persons.
- Provide crisis intervention services.
- Manage county-wide medical services activities, facilities and resources.
- Provide for transportation of casualties and medical resources.
- Coordinate relocation of patients where necessary.
- Provide technical analysis and recommendations on public health threats such as chemical or radiological contamination, water, food or environmental contamination.
- Primary advice and analysis of community-wide sanitation, disease control and potential quarantine situations.
- Assist Human Services Group with providing shelter, medical and psychological analysis.
- Provide for mental health, post-disaster trauma and stress.
- Provide treatment for disaster victims including emergency worker.
- Make recommendations and provide for care of animals if necessary during disaster situations.
- Provide for proper identification, transport and care of deceased.
- Participate in planning, training, exercising, communications, warning, damage assessment and other functions as required.

**g. Agriculture Group**

**Coordinator:** UW Extension Community Development and Resource Agent

**Other Members:** ASCS Director, Soil Conservation Agent, Racine County Horticulture Agent, Farmers Home Administration, County Dairy and Livestock Agent, County Crops Agent.

**Primary Tasks:**

- Assess impacts of disaster on farmers, food products, livestock, commodities.
- Develop programs and policies of financial and practical assistance where necessary.
- Participate in planning, training, exercising, communications, warning, damage assessment and other functions as required.

## **2. LOCAL EMERGENCY PLANNING COMMITTEE (LEPC)**

- a. The primary duty of the LEPC is to develop and submit the Racine County Hazardous Materials Plan. This plan must meet all state and federal criteria including:
  - identification of all facilities handling extremely hazardous substances (EHS) as defined by the EPA,
  - identification of major traffic routes,
  - off-site emergency response procedures for EHS facilities,
  - emergency notification procedures,
  - methods for determining occurrence, release, and affected area and impacted population,
  - methods for and schedules for exercising hazardous materials emergency response plans.
- b. Annually review and update Racine County Hazardous Materials Plan and Off-Site Facility plans.
- c. Conduct hazardous material exercises involving EHS and Hazardous Substances.
- d. Under Section 311-312 of SARA/Title III, receive and maintain copies of Tier II reports, Material Safety Data Sheets (MSDS) and site plans.
- e. Provide information to the public as required in Section 324 of SARA/Title III, consistent with Section 322, Trade Secrets.
- f. Publish an annual notice in the local newspaper that the hazardous materials emergency response plan and off-site appendixes, material safety data sheets, and inventory forms have been submitted under Section 324 of SARA/Title III.
- g. Community Emergency Coordinator and/or the Emergency Management Coordinator make the determinations along with the Facility Emergency Coordinators, necessary to implement the hazardous materials plan.
- h. Upon receipt by the committee or the committee's designated community emergency coordinator of a notification of a release of a hazardous substance, take all actions necessary to ensure the implementation of the Racine County Hazardous Materials Plan.

- i. Consult and coordinate with the County Board, the County and local heads of emergency government services, and the County Emergency Management Committee in the execution of the Local Emergency Planning Committee duties.

### **3. FIXED FACILITIES**

- a. **Planning Requirements:** Any facility that uses, stores or produces any of the extremely hazardous substances (EHS) at or above the threshold planning quantities are required to assist the LEPC in the development of the Off-Site Facility Plan.
- b. **Reporting Requirements:** Employees and agents of facilities that use, store or produce EHS or hazardous substances at or above the threshold planning quantity are required to annually submit a Tier II Report, Safety Data Sheet and site plan to the State Emergency Response Board, Local Emergency Planning Committee, and the local fire department.
- c. **Spill Reporting:** Employees and agents of facilities are obligated to report any release or spill of a hazardous or extremely hazardous substance under Wisconsin Spill Law Sec. 144.76, Wisconsin Statutes.

Under Sec. 144.76, Wisconsin Statutes, if a spill occurs, the facility is responsible for minimizing the harmful effects and restoring the environment to the extent practical including the clean-up of the spill.

## **III. HAZARD ANALYSIS**

### **A. GENERAL INFORMATION**

Racine County encompasses 337 square miles and includes 18 cities, towns and villages. Kenosha, Walworth, Waukesha, and Milwaukee Counties border Racine County. The general population of Racine County is approximately 188,904 persons with an average population density of 561 persons per square mile.

### **B. WATERWAYS**

There are several major waterways in Racine County. Lake Michigan borders Racine County on the east side. In addition, major rivers include the Pike, Fox, and Root Rivers. Large inland lakes include Eagle Lake, Browns Lake, Tichigan Lake, and Wind Lake.

### **C. PLANNING & REPORTING FACILITIES**

According to the 1992 Agricultural Census, there are approximately 631 farms. In addition, there is a strong industrial base in Racine County. Major manufacturers include Johnson Wax, Nestle, and Case Tractor. There are approximately 67 identified planning facilities and over 100 reporting facilities under the requirements of SARA Title III. Reporting facilities include manufacturers, warehouses, and petroleum dealers. Common chemicals found include:

petroleum products, Anhydrous Ammonia, Chlorine, Propane, Sulfuric Acid, Nitric Acid, Sodium Cyanide, and a variety of agricultural chemicals.

#### **D. SPILLS**

Between 1975 and 1986, Racine County averaged approximately 41 reported spills per year. Shortly after the passage of SARA Title III, this number went as high as 71 reported spills. In recent years, however, those averages have gone down considerably. The vast majority of these spills include petroleum products. However, there have been releases of chlorine, formaldehyde, Sulfuric acid, and other hazardous and extremely hazardous substances, as defined by the EPA. A complete summary of spills reported to Racine County Emergency Management is kept on file and can be requested. In addition, a request for the State Spill Summary can be made to the DNR.

#### **E. TRANSPORTATION ROUTES**

Major transportation routes in Racine County include I-94, a major corridor between Chicago and Milwaukee. In addition, Hwy. 36, Hwy. 11, Hwy. 20, and US 45 are considered major transportation routes in which large quantities of chemicals are transported. There are approximately five rail lines which include the Chicago and Northwestern, CP Rail (formerly Soo Line) and WI Central Limited. There are a total of 14 listed airports. They are:

Racine County also has six airports which serve the public: Burlington Municipal Airport, owned by the City of Burlington; and five others under private ownership: John H. Batten Airport (City of Racine), Fox River Airport (Town of Rochester), Cindy Guntly Memorial Airport (Town of Norway), Sylvania Airport (Town of Yorkville), and Valhalla Airport (Town of Raymond). As of the year 2007, there were about of 200 aircraft based in Racine County, a level which has been relatively constant over the past 10 years. There are also several private airports and heliports in and adjacent to Racine County.

A study of chemicals transported over I-94 indicated that during the time of study, 39 different tanks passed through the Kenosha scale. Four contained EHS chemicals: ammonia, hydrogen chloride, phosphoric acid and sulfuric acid. The most common placarded chemical was 67 *flammables* and 34 *corrosives*.

Two Eagle Scout Candidates did separate Hazardous Material Transportation Studies. The first scout studied the Burlington area and the second scout studied the corner of Hwys 11 & 31 in the Town of Mt. Pleasant. The respective studies are kept on file.

#### **F. PIPELINES**

Wisconsin Natural Gas services Racine County with natural gas. There are two pipelines running through the county and periodically there are ruptures or breaks in the line. West Shore Pipeline has a gasoline pipeline that runs through Racine County. On August 9, 1990 there was a break in this pipeline and approximately 8400 gallons was spilled.

## **G. LOCAL CAPABILITIES**

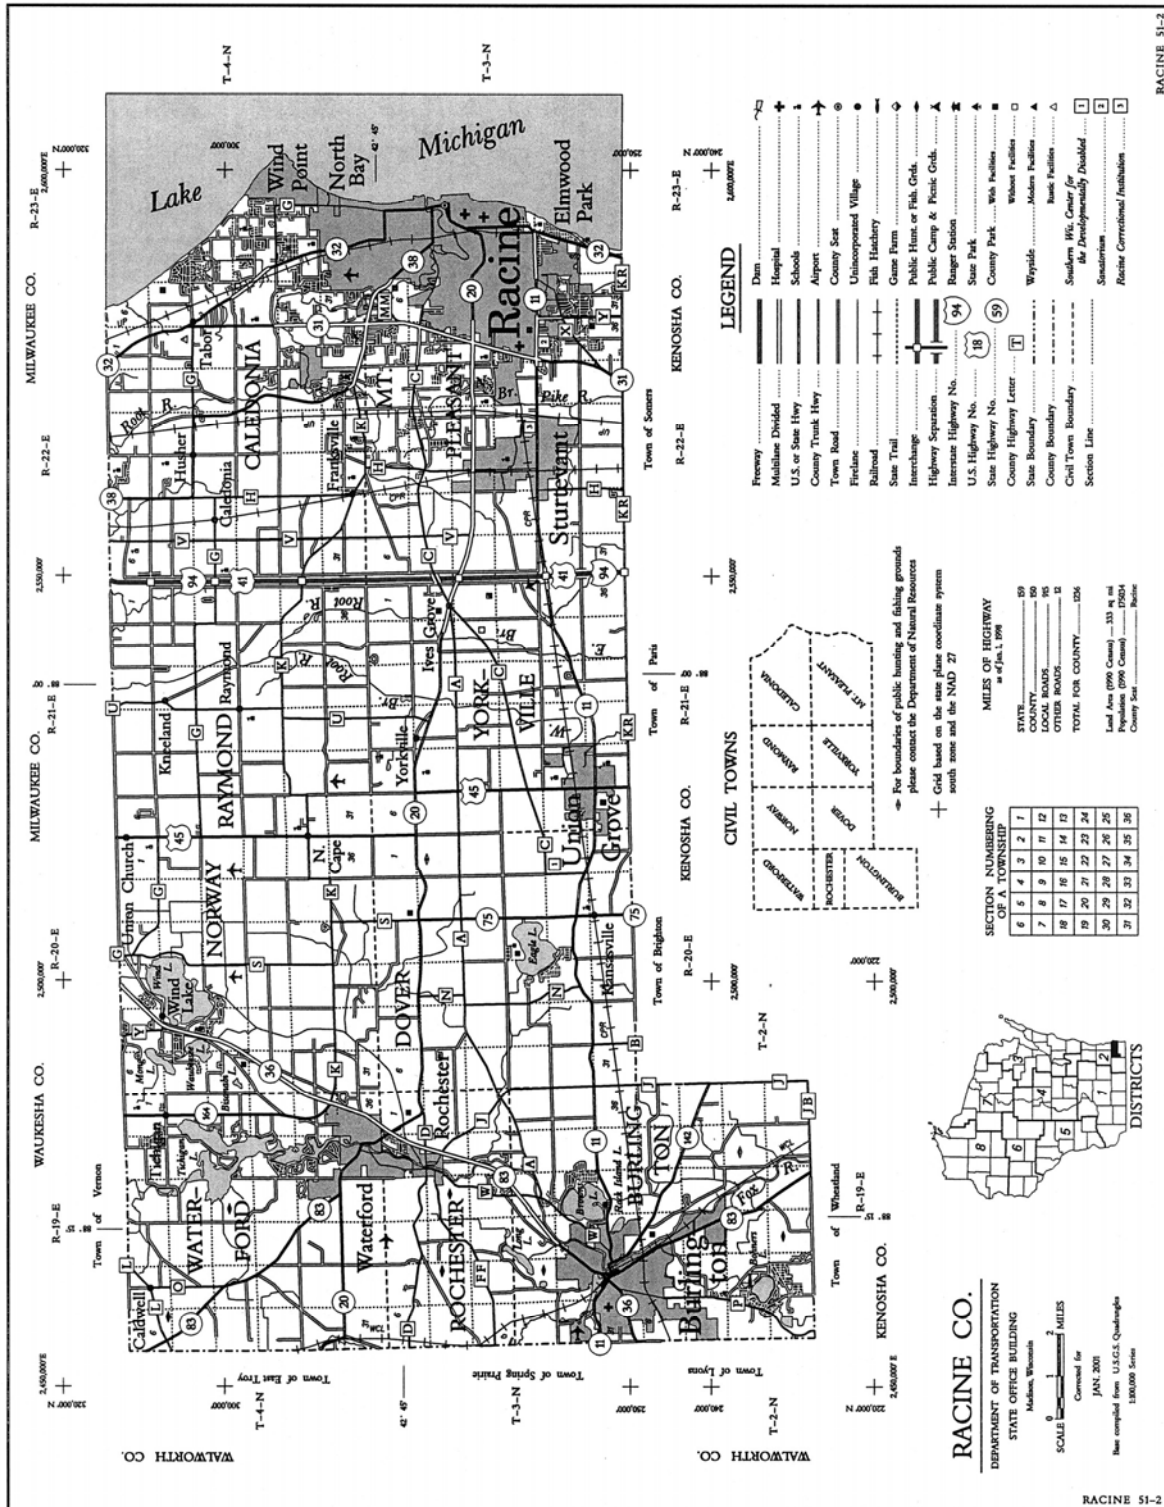

There are 12 local fire departments in Racine County. The City of Racine Fire Department, Caledonia Fire Department and South Shore Fire Department are full-time departments. The City of Burlington Fire Department has both full-time and volunteer members. The other eight departments are volunteer only.

The City of Racine Fire Department has a fully equipped hazmat trailer and Type II certified and trained personnel. They are a Regional Hazmat Team. This team trains and exercises regularly. Both Caledonia, Mt. Pleasant, Sturtevant Fire Departments have limited hazmat capability and equipment. They cross train with the City of Racine Hazmat Team and with the Johnson Wax Fire Brigade. The volunteer departments have limited capabilities, but may be able to contain minor spills or releases. Many do not stock basic absorbent materials equipment. Therefore, basic spill kits, containing absorbent pads, booms and other equipment, would be helpful.

In a number of cases, the Wisconsin Department of Natural Resources has contracted with spill response contractors for the containment, clean-up or removal of hazardous materials or abandoned containers. In addition, the US Coast Guard Marine Safety Office has jurisdiction over Lake Michigan and responds to and investigates these releases.

**\*Note: For a more thorough Hazard Analysis, please see the Racine County Hazard Mitigation Plan.**

**Racine County Emergency Management**  
**262.636.3515**

# Wisconsin Hazardous Materials Response System as of 3-01-14

## **IV. HAZARDOUS MATERIALS RESPONSE PROCEDURES**

### **A. REPORTING**

The Racine County Office of Emergency Management receives initial notification that a spill/release of a hazardous material has occurred from either the facility, first responding agency, or a citizen report. The Racine County Spill Hotline is answered after hours by voice mail and in an emergency, the Racine County Sheriff's Department Dispatch Center can be accessed.

Under requirements of Wisconsin's Spill Law Sec. 144.76, Wisconsin Statutes, all spills/releases of hazardous materials are to be reported to the DNR via the 24-hour emergency hotline number 1-800-943-0003. It is the responsibility of the spiller or shipper to ensure that this notification is made. In addition, SARA/Title III requires that the Local Emergency Planning Committee be notified. This can be accomplished by contacting the Racine County Spill Hotline at 414-636-3513. In some cases, the National Response Center must also be notified at 1-800-424-8802.

### **B. NOTIFICATION**

1. Report Documentation - The Dispatcher receiving a call about the spill/release of a hazardous material in Racine County will take down as much information as possible, using the Racine County Spill Report Form, and will dispatch to the scene the appropriate jurisdictional fire department and law enforcement agency. The Dispatcher will then notify the Racine County Emergency Management Coordinator or his deputy to the incident.
2. Internal Auditing - The Dispatcher will follow standard operating procedures for a hazardous materials spill/release for alerting key personnel in the county emergency management organization.
3. Public Alerting, Warning and Information - Whenever it is determined by appropriate members of the county emergency management organization that a protective action for Racine County residents is required because of a hazardous materials spill or release, the Racine County Sheriff's Department will stand by to activate any or all of the following public warning systems:
  - a. county-wide outdoor warning siren system.
  - b. county or area emergency broadcast system (radio, TV stations)
  - c. local emergency broadcast system radio receivers (public schools, private schools, and industry)

## **C. DIRECTION AND CONTROL**

The direction and control of a hazardous materials incident in Racine County will be achieved through the county emergency management organization, the appropriate field incident commander and, as necessary, use of the County Emergency Operating Center (EOC).

1. Line of Succession - If key members of the emergency management organization are on vacation, incapacitated, or otherwise unavailable for duty when a hazardous materials incident occurs, an appropriate line of succession for each office will be followed.
2. Communications - As documented in a majority of case studies on worldwide disasters since the turn of the century, failure or overtaxation of day-to-day communications systems is the major problem that has plagued most disaster incidents. Cellular telephones and amateur radio can be utilized to augment normal communication channels.

## **D. INCIDENT COMMAND SYSTEM**

The “Incident Command System” (ICS) is mandated for use in all incidents involving hazardous materials. The National Fire Academy’s model ICS program meets the requirements of this Standard.

The Incident Command System is a management tool consisting of procedures for organizing personnel, facilities, equipment and communications at the scene of an emergency.

As a management tool, ICS can be used in a variety of situations and conditions. It is not isolated to the fire services and all agencies can successfully utilize the principles.

ICS is organized in a modular format with five primary functional areas. These areas are command, operations, planning, logistics, and finance. ICS is operated out of a Command Post. The Command Post can be any vehicle specially designed, identified and known to all participants as the Command Post. In a large incident, the City of Racine and the Racine County Sheriff’s Department both have vehicles designated and equipped as functional Command Posts. In addition, a Command Post can be requested from Wisconsin Emergency Management by contacting 1-800-943-0003. Representatives from all operational agencies should be located at the Command Post.

Under ICS, the concept of unified command is implemented in multi-agency operations. Unified command is shared responsibility for the overall management of an incident and all agencies will contribute to the command process. However, someone must be in charge.

## **INCIDENT COMMANDER**

The Incident Commander is the person in overall charge of the event. The Incident Commander is selected based on who has the primary authority for overall control of an emergency. More specifically, it is usually the senior officer on-site.

In a hazardous materials incident, the Incident Command System is required to be used and the fire department is the primary agency in charge of the operation. Other agencies would serve in a supporting role. However, these agencies do not relinquish authority under the ICS network, but instead, contribute to the command process under the general direction and coordination of the Incident Commander. Open lines of communication are very important, and the Incident Commander should hold periodic briefings.

#### **E. EMERGENCY OPERATING CENTER:**

In large or complex incidents, an Emergency Operating Center (EOC) may be opened to support field operations and coordinate activities involving several command posts at different incident sites.

The Emergency Operating Center is the place where the County Executive, City of Racine Mayor and other chief elected officials, major department heads and specialized resources will come together and handle county and community-wide policies, decisions, media relations, manpower and resource procurement.

The following are examples of emergency and disaster incidents where the County Emergency Operating Center should be activated to function in conjunction with a field command post(s):

- a major chemical spill or release that will require large-scale shelter or evacuation of residents.
- a major airline crash anywhere in Racine County.
- large scale flooding.
- severe weather, downburst or tornado damages or loss of life and large-scale damages are imminent or have occurred.
- widespread civil unrest or disturbances.
- terrorist incidents.
- extreme prolonged blizzard or heat wave conditions.

## **Hazardous Materials Commodity Flow Study**

### **August 2011**

#### **Executive Summary**

Accidental releases involving hazardous materials occur on a regular basis throughout this country. Additionally, the potential for deliberate releases clearly underscore the continuing need for emergency planning and preparedness. A basic tenet of the Superfund Amendments and Reauthorization Act (SARA) of 1986 is the collection, analysis and pre-planning for emergency releases of hazardous materials. Historically, most planning efforts involved chemical use, storage and manufacture at fixed facilities nationwide. However, the vast majority of accidental chemical spills and releases do not involve a fixed facility.

Transportation of hazardous materials presents the greatest potential danger to the public in terms of an accidental release. While fixed facilities implement emergency procedures and costly mitigation efforts, the very act of transporting hazardous materials on our highways, railroads and airspace presents a wide range of potential dangers which defy mitigation efforts. Experience demonstrates the best approach to any hazardous materials release is prior knowledge regarding the nature of the chemicals involved and pre-planning for safety precautions and equipment necessary to respond to these releases. To adequately plan for transportation accidents, planners need to identify the chemicals in transit through the county.

The scope of this study covers highway transportation of hazardous materials in Racine County. This study does not address pipelines for petroleum or natural gas or air transport for hazardous materials. In addition, general information regarding off-site emergency response planning facilities and county hazardous materials response planning efforts was reviewed.

This study is intended to better prepare local responders as well mutual aid departments in surrounding counties, should they be asked to provide service in a transportation-related chemical release in Racine County.

#### **Legal Authority and References**

1. Public Law 99-499, the Superfund Amendment and Reauthorization Act (SARA/Title III of 1986) - an act passed by the U.S. Congress to insure that local, state, federal and industry responders will have proper information on what chemicals are contained at an industrial facility, the types of health risks posed by those chemicals, and the actions needed to mitigate such an accident.
2. Public Law 103-337 reenacts the Federal Civil Defense Act and all its authorities into the Robert T. Stafford Disaster Relief and Assistance Act now known as the National Defense Authorization Act for 1995. The Federal Civil Defense Act mandated the national civil defense program and required planning for enemy attack, assigning joint responsibilities to the federal government, the states and all political subdivisions throughout the United States. The act establishes the framework for the County

Emergency Management Organization. The Disaster Relief Act authorized federal subsidy monies be passed down to state and local governments to be used for all natural and man-made disasters, as well as nuclear or enemy attack. The act also mandated that all state and local governments have an “all hazard” disaster plan that would be consistent with the federal program.

3. Wisconsin Act 342 of 1987 was passed by the Wisconsin State Legislature and signed by the Governor on April 21, 1988, and adopts all provisions of Public Law 99-499, SARA/Title III, for hazardous materials planning. The law also provides a statewide funding mechanism to reimburse LEPC’s for expenses generated due to requirements of the law.
4. Wisconsin Act 256 of 1989 allows LEPC’s to seek reimbursement for costs related to hazmat response.
5. Wisconsin Act 104 of 1991 established 7-11 Regional Response Teams to provide hazmat response.
6. State Statutes Chapter 323 requires the governing body of each county, town and municipality in Wisconsin to adopt an effective “all hazard” program of emergency government consistent with the State plan, and empowers municipalities to appropriate funds and levy taxes for such a program. It also enumerates the powers and duties of the Governor, Adjutant General, and of counties, municipalities and their representatives.
7. The law also establishes emergency government authorities.
8. Other Applicable Legislation:

The Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA) commonly known as Superfund. CERCLA provides authority for federal cleanup of sites where hazardous materials have been deposited or released, and for response to releases of hazardous substances or other contaminants.

9. Occupational Safety and Health Act (OSHA) of 1974 requires employers handling certain hazardous materials to prepare and have available Material Safety Data Sheets (MSDS) that describes the properties and health risks of those chemicals used at a facility.
10. OSHA Hazard Communication Standard of 1983 included requirements for information disclosures to employees -employee right-to-know.
11. Sec. 144.76, Wisconsin Statutes, commonly known as the State Hazardous Substance Spill Law, establishes the Department of Natural Resources (DNR) as the primary state agency to deal with hazardous material spills; mandates that all spills of chemical substances in Wisconsin be reported to a 24-hour hotline (1-800-943-0003); and determines that the spiller of any hazardous chemical substance is responsible for the costs of clean up of that substance.

## **Methodology**

This project utilized two primary strategies for identifying hazardous materials in-transit.

The first involved reviewing general information regarding off-site emergency response planning, facilities and county hazardous materials response planning efforts. Currently, Racine County has over 100 identified planning facilities and reporting facilities which have extremely hazardous substances or a reportable quantity of hazardous materials and require an off-site emergency response plan under the requirements of SARA Title III. Those plans are regularly reviewed and updated: current copies are located at the Racine County Office of Emergency Management and with the fire department(s) responsible for responding to each facility.

The second strategy utilized actual spotting activities with trained observers stationed at areas throughout the county. The observers made note of placard numbers displayed on vehicles passing their locations. Current regulations regarding placarding presented a critical limitation in that placards are only required if the amount of an individual hazardous material exceeds certain thresholds. Likewise, it could not be determined whether or not all traffic passing by the observation areas was in compliance with placarding regulations. Another limitation involved the fact that observers were only scheduled for specific, finite periods of time so it was therefore possible for hazardous materials to pass by any given location when no observer was present or were not identifiable by an observer.

Readers are cautioned that this study is for planning purposes only. This study could not attempt to identify all hazardous material shipments through observation because of the infrequency of shipment for some chemicals. For example, it is known that radioactive materials are transported on highways however no such placarded vehicles were observed. Furthermore, smaller quantities of hazardous materials escape the placard regulations. For example, UPS, FedEx and other delivery services deliver hazardous substances in smaller amounts but are not required to have a placard. Such deliveries, while not easily identified, pose a risk as well.

## **General County Information**

Racine County has a population of 195,408 as of the 2010 census. Racine covers 792 square miles (Land = 333 sq. miles, Water = 459 sq. miles).

Major highways running through Racine County are:

-  Interstate 94
-  U.S. Highway 41
-  U.S. Highway 45
-  Highway 11 (Wisconsin)
-  Highway 20 (Wisconsin)
-  Highway 31 (Wisconsin)
-  Highway 32 (Wisconsin)
-  Highway 36 (Wisconsin)

- **38** Highway 38 (Wisconsin)
- **75** Highway 75 (Wisconsin)
- **83** Highway 83 (Wisconsin)
- **142** Highway 142 (Wisconsin)
- **164** Highway 164 (Wisconsin)

Each of these major thoroughfares was utilized as an observations point for recording this study.

Racine County is made up of various cities, villages and towns.

Racine County also consists of many unincorporated communities:

### **Cities, villages, and towns**

- Burlington (city)
- Burlington (town)
- Caledonia
- Dover
- Elmwood Park
- Mount Pleasant
- North Bay
- Norway
- Racine (County Seat)
- Raymond
- Rochester
- Sturtevant
- Union Grove
- Waterford (village)
- Waterford (town)
- Wind Point
- Yorkville

### **Unincorporated communities**

- Caldwell
- Franksville
- Husher
- Ives Grove
- Kansasville
- Kilbournville
- Kneeland
- North Cape
- Sylvania
- Tabor
- Tichigan

- Thompsonville
- Union Church

Each of these communities are affected by the commodity flow of traffic highlighted in this study.

### **Hazardous Material Information Review**

Researchers used information provided by the Racine County Office of Emergency Management to determine probable chemicals and ingress/egress data. This information is included in each facility's off-site emergency response plan kept on file with the Racine County Office of Emergency Management, responding fire departments and the Racine County Hazardous Materials Team.

### **Fixed Facilities**

- **Planning Requirements:** Any facility that uses, stores or produces any of the extremely hazardous substances (EHS) at or above the threshold planning quantities are required to assist the LEPC in the development of the Off-Site Facility Plan.
- **Reporting Requirements:** Employees and agents of facilities that use, store or produce EHS or hazardous substances at or above the threshold planning quantity are required to annually submit a Tier II Report, Material Safety Data Sheet and site plan to the State Emergency Response Board, Local Emergency Planning Committee, and the local fire department.
- **Spill Reporting:** Employees and agents of facilities are obligated to report any release or spill of a hazardous or extremely hazardous substance under Wisconsin Spill Law Sec. 144.76, Wisconsin Statutes.
- Under Sec. 144.76, Wisconsin Statutes, if a spill occurs, the facility is responsible for minimizing the harmful effects and restoring the environment to the extent practical including the clean-up of the spill.

Racine County Emergency Management provided access to the Emergency Response Contingency Plans on file with the county. Due to the quantity, a random sampling of the plans were reviewed. Special attention was given to the quantity and type of reportable extremely hazardous materials.

The findings are listed below. Special attention to be given to the maximum reportable amounts. The quantities would be staggering to the first responders in the event of a catastrophic release. Quantities typically overwhelm those allowed by the logistics of highway transportation. Emergency responders should create preplans for the most common extremely hazardous substances found in their community.

The findings are not intended to be all-inclusive of hazardous materials used at reporting facilities within Racine County. They are intended to be a significant sample of the extremely hazardous substances and reportable quantities of hazardous materials in Racine County.

## Racine County Commodity Flow Study - On Site - Plan Review

Facility	Address	E.H.S. & Hazardous Substances	Maximum Quantity
Belle Tool Specialty	3001 Wolff Street	Anhydrous Ammonia	4300 Lbs.
		Liquid Nitrogen	1000 Gals
Accu Temp Heat Treating	2400 Racine Street	Anhydrous Ammonia	5150 Lbs
		Liquid Nitrogen	1200 Gals
Andis Company	1800 Renaissance Blve	Sodium Cyanide	550 Lbs
		Sodium Hypochlorite	330 Gals
Beck Aluminum Racine	1349 23 <sup>rd</sup> Street	Chlorine	16000 Lbs
		Oxygen	95000 lbs
Wisconsin Plating	620 Stannard Street	Nitric Acid	385 Gals (68%)
		Sodium Cyanide	1000 Lbs
		Sulfuric Acid	8787 Lbs
SBC Wisconsin	411 7 <sup>th</sup> Street	Sulfuric Acid	9671 Lbs
SBC Wisconsin	1200 North Fancher Road	Sulfuric Acid	5382 Lbs
SC Johnson and Son	1525 Howe Street	Sulfuric Acid	13,651 Lbs
		Diesel Fuel	269,280 Lbs
SC Johnson Wax – Waxdale Facility	8311 16 <sup>th</sup> Street	Sulfuric Acid	129,450 Lbs (93%)
		Formaldehyde	72000 Lbs
		Sodium Hypochlorite	304764 Lbs
		Isopentane	66276 Lbs
		Isobutane	634048 Lbs
Echo Lake Foods	33102 South Honey Lake Road	Anhydrous Ammonia	10000 Lbs
Conserv FS Coop	4304 South Beaumont	Anhydrous Ammonia	390000 Lbs
		Terbufos	120 Lbs
		Azinfos-Methyl (Gunthium)	15 Lbs
D.W. Davies and Co	3200 Phillips Avenue	Hydrofluoric Acid	2000 Lbs
		Ethylene Diamine	410 Lbs

		Nitric Acid	100 Lbs
		Ammonium Hydroxide	410 Lbs
Delta Finishing	1500 92 <sup>nd</sup> Street	Sulfuric Acid	2472 Lbs
		Muriatic Acid	2583 Lbs
Diversey, Inc	8310 16 <sup>th</sup> Street	Sulfuric Acid	3023 Lbs
Chromium Inc	1930 Roosevelt Avenue	Sulfuric Acid	1300 Lbs
		Chromic Acid	4660 Gals
BRP US Inc.	10101 Science Drive	Sulfuric Acid	10096 Lbs
		Alodine EC9000 (Hydrofluoric Acid)	8712 Lbs
City of Burlington Water	341 Origen Street	Chlorine	450 Lbs

A list of the most common extremely hazardous substances at fixed facilities within the county include:

1. Anhydrous Ammonia
2. Hydrofluoric Acid
3. Chlorine
4. Nitric Acid
5. Sulfuric Acid
6. Isopentane
7. Sodium Cyanide
8. Formaldehyde

In addition to the extremely hazardous substances listed above, numerous other toxic chemicals and hazardous materials are used at fixed facilities within the county, including:

1. Aluminum Hydrochloride
2. Ammonium Hydroxide
3. Chromic Acid
4. Diesel Fuel
5. Ethylene Dichloride
6. Gasoline
7. Hydrogen

8. Isopentane
9. Nitrogen
10. Oxygen
11. Phenol
12. Phosphoric Acid
13. Propylene (Propane)
14. Sodium Hydroxide
15. Sodium Hypochlorite
16. Toluene

More comprehensive information regarding chemicals, facilities, response and vulnerability zones can be found in the individual off-site emergency response plans.

According to information provided by the county, there are numerous hazardous substances located in fixed facilities throughout Racine County. These substances range in quantity from 10 ounce agricultural packages to 196,000 pound rail car loads. It is assumed that exposure to all transported hazardous substances in Racine County will be the result of road, rail, barge, air or pipeline delivery.

The probable worst-case scenario is presented by anhydrous ammonia or hydrofluoric acid with fire involvement, which are transported in and through the county to multiple facilities. Based on the LEPC's planning efforts, the risk is low to moderate for most facilities with the most likely risk of an accident occurring during transport for transfer.

### **Traffic Observation – Spotting Locations**

Observers were instructed to record their location, times of observation, placard numbers and type of vehicle involved using a standard form. Obstruction of or inability to read the placard was noted in some cases in which the observer recognized a placard but could not read the number before the vehicle passed out of the observer's field of vision. The quantity of substances observed was not noted as the information would be difficult to obtain.

The Racine County Emergency Management and Racine County Sheriff's Department were given notice of each observation time.

Racine County Emergency Management and the Racine County Sheriff's Department were asked to provide five to ten locations to be utilized as observation areas. Locations selected were the area's most common for high flow of commodity transportation.

Observation periods consisted of .5 to 4 hour blocks on average; at various times during daylight hours from June 15<sup>th</sup>, to August 18<sup>th</sup>, 2011, for a total of 80 observation hours. Data was gathered at several observation locations:

## Racine County Commodity Flow Study Spotting Locations

Spotting Location	Date	Time Frame
<b>Racine County (Hwy 11 and Hwy 32)</b>	6/22/2011	1100-1400
	6/26/2011	0800-1200
	7/1/2011	0800-1500
<b>Racine County (Hwy 11 and Wisconsin St.)</b>	6/22/2011	1415-1715
	6/26/2011	1300-1700
	7/5/2011	0730-1030
	7/7/2011	0730-1030
<b>Racine County (Hwy 20 and 31)</b>	7/26/2011	0900-1700
	7/29/2011	0730-1130
	7/31/2011	1900-2300
<b>Racine County (Hwy 20 and East Frontage along I-94)</b>	6/22/2011	0930-1030
	7/8/2011	1140-1240
	7/11/2011	0600-1200
	7/13/2011	0715-1115
	7/15/2011	0430-0630
<b>Renaissance and Hwy 20</b>	7/16/2011	0800-1600
	7/22/2011	0730-1130
	7/22/2011	1200-1600

Traffic observation did not directly include water or air but did include interstate, state and local highways and streets; and railroads if requested as an identification point.

See Table A which identifies the locations, chemicals and types of vehicles observed.

### **Hazardous Materials Placarding**

The hazardous materials which are the subject of this study are those which are both identified and subject to placarding rules by federal and state laws. They include explosives, gases, flammable liquids, combustible liquids, flammable solids, spontaneously combustible materials, water-reactive substances, oxidizing substances, organic peroxides, toxic substances, infectious substances, radioactive materials and corrosive materials. A more thorough description of these classifications and placarding requirements can be found in the Emergency Response Guidebook provided by the U.S. Department of Transportation.

### **Traffic Observation Results**

Commodity Flow was observed for a total of eighty hours at locations designated by the Racine Emergency Manager and the Racine County Sheriff's Department. There was a total of 453 placarded vessels in transport observed during the time period for an average of 5.63 observations per hour. Approximately 26% of vessels were placarded but contained no UN numbers. Traffic observation did not directly include water, rail or air unless specifically identified by the Racine County Emergency Management, but did include interstate, state and local highways and streets.

SB = South Bound, EB = East Bound, NB = North Bound, WB = West Bound

## NUMBER OF VESSELS TRANSPORTING HAZARDOUS MATERIALS BY DEPARTMENT OF TRANSPORTATION CLASS #

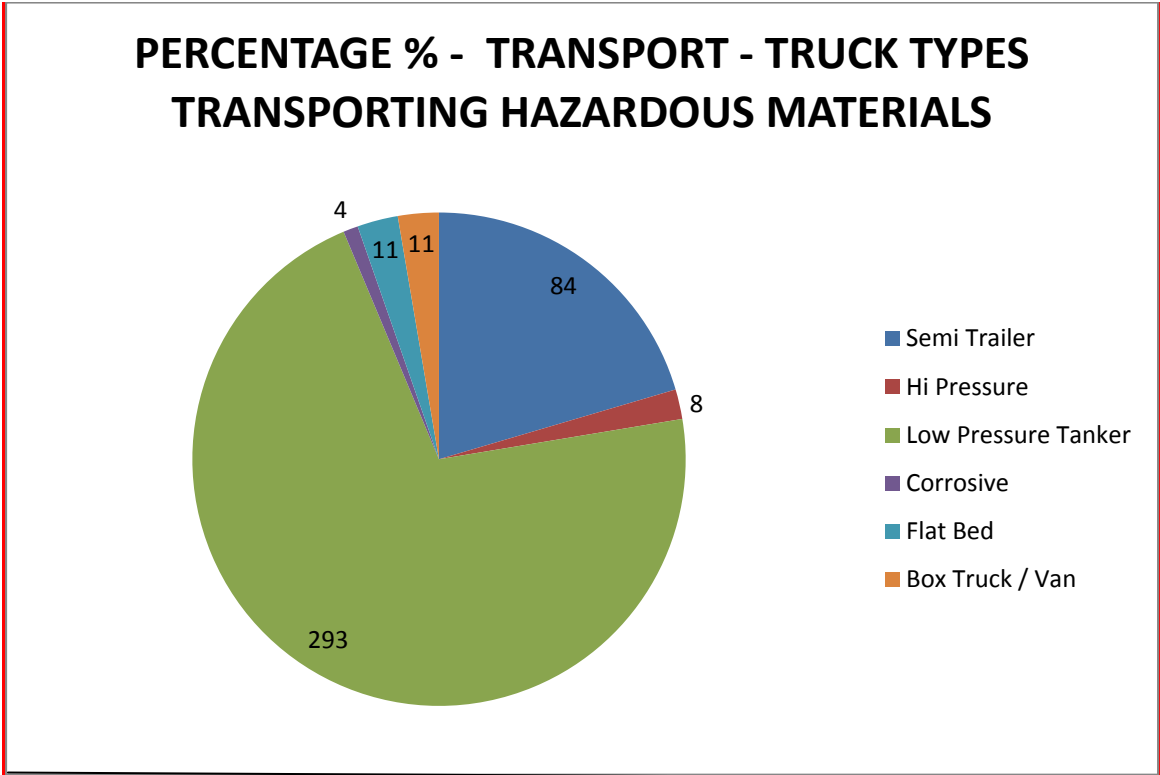

*A full list of all chemicals observed can be found in Table A – Traffic Observation Results.*

As previously mentioned in this report, placards are only required if the amount of an individual hazardous material exceeds certain thresholds. Likewise, it was impossible to determine whether or not all traffic passing by was in compliance with placarding regulations.

Of interest during the observation periods was the vast amount of traffic that passes through the county each day; in particular, the amount of vehicles that generally carry hazardous materials (e.g., semi-tanker, low pressure vessels, flat bed trucks) which are not placarded or chemicals not identifiable.

Observers tracked these vehicles to illustrate how important it is for responders to assume that hazardous materials are involved until determined otherwise. These observations are included in the chart below as well as Table A – Traffic Observation Results. There were also many trains observed and not included in the results due to unknown number of cars and other factors.

The three most common methods observed were low pressure semi-tanker and semi trailer and the corrosive tankers. These methods represented 100% of the observations.

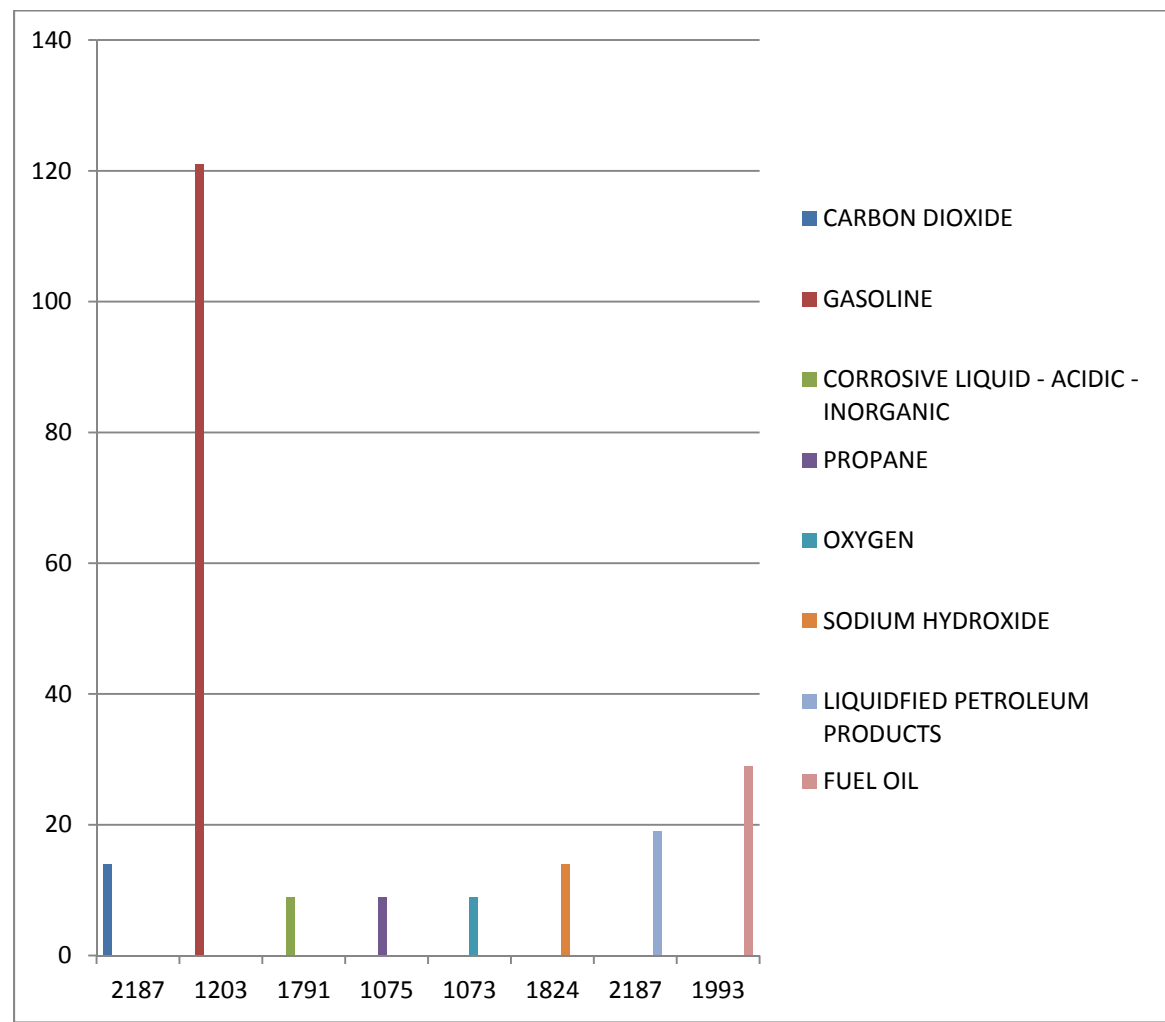

The following totals represent the total observations during the 80 hours of highway observation.

**MOST COMMON CHEMICALS IN TRANSPORT IN RACINE COUNTY**

The three most common chemicals found to be traversing Racine County based on observations are gasoline, fuel oil and liquefied petroleum solutions. Vessels carrying flammable liquids far exceeded the other vessels carrying hazardous materials. The top 8 hazardous materials in transport are listed. The UN number is given at the bottom of the chart.

Clearly, a substantial amount of diverse hazardous materials traverse Racine County. Therefore, a release could occur at any time as a result of a traffic accident, or equipment failure. It is important to share this information with local first responders and mutual aid departments to underscore the importance of training in hazardous material identification, procurement of equipment and pre-planning for approach to any traffic accident. The safest strategy for first responders would be to assume that hazardous materials are involved until determined otherwise.

Racine County is encouraged to continue planning and training efforts which focus on hazardous materials accidents to include procurement of equipment for departments within the county that may

be asked to respond; public education and outreach through training, informational sessions, videos and other means and pursuit of grant funding that may be available to aid in these efforts.

### **Spill History**

Racine County Emergency Management maintains a file of all spills including facility name (if known), address, date of spill and product spilled.

### **Conclusion**

This study confirmed that Racine County is a major transit route for hazardous materials destined for locations both inside and outside county jurisdiction. Additionally, it became clear from the observational study that a wide range of chemicals are in transit at any given time during daylight hours. No attempt was made to monitor nighttime movement of placarded vehicles due to the obvious limitations presented by darkness.

Hazardous materials exhibited a wide range of substances. These chemicals ranged from products such as gasoline to extremely hazardous substances such as ammonia. First responders should be aware that other dangerous chemicals may be present at any given time and should exercise extreme caution when approaching a hazardous materials transportation accident scene.

The materials most commonly used in manufacturing, does not directly correlate to the hazardous material commodities flowing through the community in transport. Sulfuric Acid was the most common reported extremely hazardous substance in the fixed facilities reporting sites, however it was seen in transport two times in the 80 hour observation period.

Vulnerability zone and transportation route maps are developed for each facility and are included in the off-site emergency response plans on file with the Racine County Office of Emergency Management.

## RACINE 51-2
