Comments
Air monitoring measurements have been averaged over a 1-hour time period and summarized above.
Start and stop times for each air monitoring instrument varies. The monitoring period is based on the earliest start time and latest stop time out of
Air monitoring is not performed during inclement weather conditions/rain and thunderstorms.
1 - Morris Industrial Fire Public Health Screening Levels are based on 1-hour time-weighted averages and were established by Agency for Toxic Substances and Disease Registry (ATSDR).
2 - HF 1-hr TWAs were greater than the Action Level at the downwind/crosswind Northeast Station on June 24, 2022 from 7:22 through 9:21 and from 10:21 through 12:06. A mobile instrument, the Single Point Monitor (SPM) Flex, was used to verify the elevated HF measurements during each period. The SPM Flex measured 0 ppm for HF and confirmed HF sensor drift in the AreaRAE Pro instrument. The AreaRAE Pro instruments were then fresh air calibrated.
3 - HF 1-hr TWAs were greater than the Action Level at the downwind Southeast Station on June 21, 2022 from 8:18 through 12:06, on June 22, 2022 from 6:57 through 9:12, on June 23, 2022 from 7:00 through 8:08 and 9:41 through 11:30, on June 24 from 7:20 through 9:21. A mobile instrument, the Single Point Monitor (SPM) Flex, was used to verify the elevated HF measurements during each period. The SPM Flex measured 0 ppm for HF and confirmed HF sensor drift in the AreaRAE Pro instrument. The AreaRAE Pro instruments were then fresh air calibrated.
Notes: °F - Degrees Fahrenheit CO - Carbon Monoxide ERRS - Emergency and Rapid Response Services H ₂ S - Hydrogen Sulfide HF - Hydrogen Fluoride LEL - Lower Explosive Limit mg/m ³ - Milligrams per cubic meter PM _{2.5} - Particles that are 2.5 micrometers and smaller PM ₁₀ - Particles that are 10 micrometers and smaller ppm - Parts per million S/N - Serial number VOC - Volatile organic compounds

Comment: Illinois Statewide Average 24-hour PM_{2.5} Concentration in 2020: 19.9 ug/m³

Comment: Off-site monitoring locations include both upwind and downwind locations. Elevated PM_{2.5} and PM₁₀ concentrations may represent other sources.
