

South Jordan Mercury Emergency Response Site Update

USEPA Region 8 November 10-14, 2022

WEBSITE

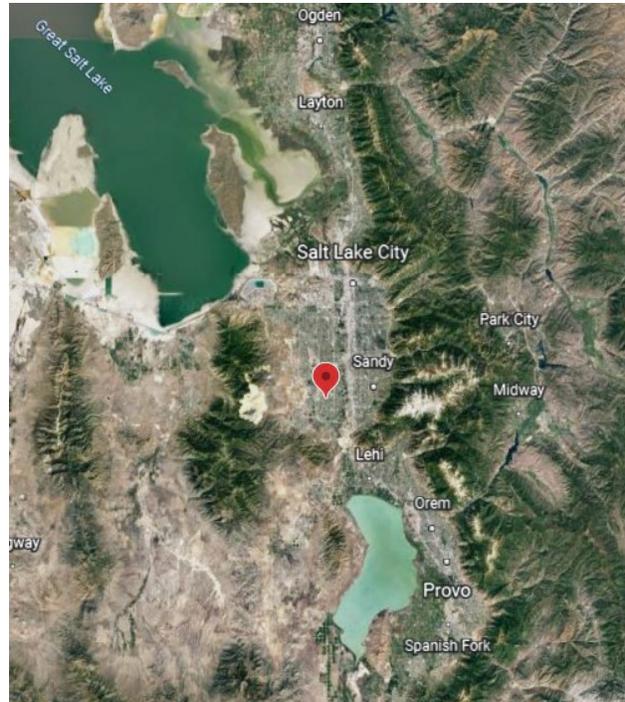

EPA [South Jordan Mercury](#) Response webpage

SITE DESCRIPTION

A homeowner was going through the belongings of an ill family member when they discovered a small jar of elemental mercury. The homeowner moved the jar to his garage in South Jordan (a suburb of Salt Lake City, Utah) and placed it atop a tall sturdy cabinet until he could identify a proper hazardous waste facility. On approximately October 23, 2022, children playing in the garage dislodged and broke the container spreading tiny beads of mercury throughout the garage. The playtime incident was not discovered by their parents until approximately one week later.

On October 31, 2022, the Fire Department responded to the residence, secured a pool of mercury at the immediate spill location, and collected indoor air readings as high as 10,000ng/m³ (nanograms per cubic meter) in the residence and 29,000 ng/m³ in the garage.

The Salt Lake County Health Department requested assistance from EPA and an EPA Response Team mobilized to the home on November 1, 2022.

SAFETY MESSAGE

Indoor air quality inside the residence and the garage exceed EPA [guidance](#). The family has relocated to a nearby hotel.

EPA has deployed a Response Team who will be working in Tyvek suits and respirators for their own protection. Air quality readings surrounding the home have not exceed background levels. EPA will continue to monitor air quality around the property.

SITE OBJECTIVES

- Collect all elemental mercury that can be identified in the garage and home.
- Use mercury cleaning agents to reduce any trace of mercury from hard living surfaces.
- Clean drain traps and remove carpeting throughout the residence.
- Screen clothing and personal belongings. Ventilate belongings in a heated environment as necessary and to the extent practical. Document and dispose of personal belongings that cannot be cleared for future use.
- Conduct 8-hr clearance monitoring.

South Jordan Mercury Emergency Response Site Update

USEPA Region 8 November 10-14, 2022

OPERATIONS PERIOD OBJECTIVES

1. Process, test and release household items to family as necessary.
2. Complete gross decontamination of garage.
3. Complete gross decontamination of the home.
4. Initiate heating and venting cycles in the residence and HVAC system in preparation for clearance sampling.
5. Screen the home and cars of visitors and places the family visited where mercury may have been tracked.

ACCOMPLISHMENTS

EPA's Response Team continued to remove items required by the family during their relocation. These items were processed with heat/vent treatments, successfully tested and returned to the homeowners. The Team continued to screen items that were in the garage and storage room when the spill occurred to determine if the levels are too high to be salvaged. On November 13, final decisions were made about items that could be salvaged or disposed of in coordination with the homeowner.

The Team resealed cracks and reapplied an epoxy coating to the floor and lower walls of the garage where the spill occurred. The Team then continued to perform multiple cycles of heating and venting in the residence and HVAC system.

8-hour clearance sampling was performed on November 12. Data logging with a Lumex was conducted for an 8-hour period in the garage near where the spill occurred (see photo above). The highest reading was 21.5 ng/m³ during this cycle. The Team also performed 8-hour clearance inside the home sampling 20 locations each hour. The highest reading in the home over this period was 113 ng/m³. These results were below the cleanup goal in the EPA Mercury Guidance of 1,000 ng/m³ and below the EPA Region 8 cleanup goal of 300 ng/m³.

On November 13, final cleanup of the site was conducted and the Team was demobilized. On November 14, final pickup of rental equipment occurred and the roll-off boxes were moved to the local fire department awaiting TCLP results so waste can be sent for disposal.

EPA recommends and will screen any homes and cars where the mercury from this incident may have been tracked. No additional homes or cars were screened during this operational period.

PLANNED ACTIVITIES

**South Jordan Mercury
Emergency Response Site Update
USEPA Region 8
November 10-14, 2022**

This will be the final update for the emergency response action. The only activities that remain are transportation and disposal of waste generated from the response (both hazardous and non-hazardous).
