Phase II Environmental Site Assessment, Quarter 4**

Dear Ms. Dunning:

Toeroek Associates, Inc. (Toeroek) and our teaming subcontractor, Tetra Tech, Inc. (Tetra Tech), (hereafter "Toeroek Team") are pleased to present the Phase II Environmental Site Assessment (ESA), Quarter 4 report regarding the 31st & Prospect Development Site (the Site) located in Kansas City, Jackson County, Missouri.

This deliverable has been reviewed internally as part of Tetra Tech's quality assurance program, as well as Toeroek's quality assurance program, and is consistent with Toeroek's Quality Management Plan for the Resource Conservation and Recovery Act (RCRA) Enforcement and Permitting Assistance (REPA) contract. Documentation of this review is retained in the Toeroek Team's project files.

If you have any questions or comments, please contact Greg Hanna at 720-898-4102 or Kaitlyn Mitchell at 816-412-1742.

Sincerely,

Greg Hanna
Toeroek Team Program Manager

Kaitlyn Mitchell
Toeroek Team Project Manager

1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) tasked Toeroek Associates, Inc. (Toeroek) and its teaming subcontractor, Tetra Tech, Inc., (hereafter “Toeroek Team”) with providing technical support to the EPA Region 7 Brownfields Program under Contract 68HERH19D0018, Task Order 68HE0719F0190. EPA Region 7 requested the Toeroek Team conduct a Phase II Environmental Site Assessment (ESA) as part of a Targeted Brownfields Assessment (TBA) of a portion of the 31st & Prospect Development Site (the Site). The Site includes eight parcels of land located at 2501, 2503, and 2505 East 30th Street; 3012 Prospect Avenue; and 3005, 3009, 3011, and 3015 Wabash Avenue in Kansas City, Jackson County, Missouri ([APPENDIX A, Figure 1](#)).

The Toeroek Team is performing this Phase II ESA based on results of previous investigations by CEG Assessments (CEG) (2016), Ramboll Environ (Ramboll) (2016), and SCS Engineers (SCS) (2018, 2019). The previous investigations occurred over a larger portion of the 31st & Prospect Development Site, a 52-parcel area. During the previous investigations in the larger, 52-parcel area, a plume of volatile organic compounds (VOCs) in groundwater was identified under eight parcels within the Site. According to the Brownfields Assessment Application (EPA 2020), the previous property owners, CRV, LLC, and the City of Kansas City, Missouri, were interested in redeveloping the property, contingent on findings of this Phase II ESA. The Site has since been sold. Currently, the City and EPA are attempting to establish an access agreement and TBA application for the new owner of the Site.

The scope of this Phase II ESA included collection of subsurface soil, soil-gas, and groundwater samples in January 2022 (Quarter 1 sampling event), to confirm or eliminate recognized environmental conditions (RECs) identified during the previous Phase I ESA (SCS 2018) and multiple Phase II ESAs (CEG 2016, Ramboll 2016, SCS 2019). In addition, the Toeroek Team installed three permanent groundwater monitoring wells on the Site in January 2022 for long-term groundwater monitoring that will aid potential remediation under the State of Missouri’s Brownfields/Voluntary Cleanup Program (BVCP) (Toeroek 2022a). The Toeroek Team is now conducting quarterly groundwater sampling of these monitoring wells. This report details the fourth quarterly (Quarter 4) sampling event at the Site.

This Phase II ESA, Quarter 4 report is consistent with ASTM International (ASTM) Standard E1903-19 for Phase II ESAs, and otherwise complies with EPA’s “All Appropriate Inquiries” Rule (40 *Code of Federal Regulations* Part 312).

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 4
SITE 8 – 31st & PROSPECT DEVELOPMENT SITE
KANSAS CITY, MISSOURI**

1.1 PURPOSE

Purposes of this Phase II ESA were to: (1) confirm or eliminate RECs identified during previous investigations; (2) acquire information regarding nature and concentration of contaminants present at the Site in soil and/or groundwater; (3) assess potential impacts on the Site and risks posed by hazardous substances that would support informed business decisions about the Site; and (4) where applicable, satisfy the innocent purchaser defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

1.2 SPECIAL TERMS AND CONDITIONS

No special terms or conditions were identified during the Phase II ESA, Quarter 4 sampling event.

2.0 BACKGROUND AND SITE HISTORY

This section specifies the location of the Site and its features, describes the physical setting, recounts the history of the Site, discusses land uses at the Site and adjacent properties, and relates results of previous investigations.

2.1 SITE DESCRIPTION AND FEATURES

The Site is in Kansas City, Jackson County, Missouri, and appears on the Kansas City, Missouri – Kansas Quadrangle, U.S. Geological Survey (USGS) 7.5-minute topographic series map (USGS 2021) ([APPENDIX A, Figure 1](#)). The Site consists of eight vacant parcels encompassing approximately 1 acre of land. Coordinates at the approximate center of the Site are 39.071081 degrees north latitude and 94.553162 degrees west longitude.

2.2 PHYSICAL SETTING

The Site lies within the east-central portion of the City of Kansas City, Missouri. It is bounded to the north by East 30th Street, with residential buildings beyond; to the east by Prospect Avenue, with commercial businesses beyond; to the south-southeast by Rent-A-Center Furniture Store and associated parking lot, with the Kansas City Public Library and associated parking lot, and East 31st Street beyond; to the west by Wabash Avenue, with residential buildings beyond; and to the north-northwest by a vacant building, with East 30th Street beyond.

2.2.1 Geologic Setting

Jackson County is within west-central Missouri, in the Iowa and Missouri Deep Loess Hills Resource Area of the Central Feed Grains and Livestock Region of the United States. The Missouri River is the northern boundary of Jackson County. The northern part of Jackson County is a near-level flood plain of the Missouri River. Adjacent to the flood plain and to the south are moderately sloping to steep, loess-covered bluffs and hills. The remainder of Jackson County, which includes the Site area, consists of gently to moderately sloping uplands and flood plains of the Blue River, Little Blue River, Sni-A-Bar Creek, and their tributaries (U.S. Department of Agriculture [USDA] 1984).

The upper bedrock formation in the vicinity of the Site consists of the middle Kansas City Group, Missourian Series, Pennsylvania System (Missouri Bureau of Geology and Mines 1917). Underlying the Kansas City Group are the shales of the Pleasonton Group. Underlying the Pleasonton Group are

predominantly shales of the Marmaton and Cherokee Groups of the Desmoinesian Series (Missouri Department of Natural Resources [MoDNR] 1997). Shale bedrock was encountered at depths of approximately 18 to 24 feet (ft) below ground surface (bgs) during the Quarter 1 sampling event (Toeroek 2022a).

Soil at the Site has been classified according to USDA Soil Conservation Services Web Soil Survey, reviewed in January 2022. The soil consists of urban land, Harvester Complex with 2 to 9 percent slopes. This soil type is moderately well drained with high runoff, and consists of silt loam from 0 to 7 inches deep, silty clay loam from 7 to 31 inches deep, and clay loam from 31 to 80 inches deep (USDA 2022).

2.2.2 Hydrogeology

Land surface elevations in Jackson County range from 1,105 ft above mean sea level (amsl) on the divide in the south-central part of the County to 690 ft amsl at normal water level on the Missouri River located on the county line of most of the northern side of the County (USDA 1984). Local topographic elevation at the center of the Site is approximately 980 ft amsl (USGS 2021).

Local Pennsylvanian-age bedrock units generally yield low quantities of marginal quality groundwater high in dissolved solids—particularly chlorides, iron, and bicarbonates (Stohr, St. Ivany, and Williams 1981).

Currently, groundwater is not used for drinking water at or near the Site. The City of Kansas City derives approximately 80 percent of its drinking water from the Missouri River and approximately 20 percent from a well field in the Missouri River Aquifer. The potable water passes through a 240-million-gallon-per-day (MGD) treatment plant before servicing customers inside and outside Kansas City (KC Water 2022). No private drinking water wells are within a 1-mile radius of the Site (MoDNR 2022).

Numerous drainageways dissect the bedrock in this area and flow toward the Missouri River. The Site is relatively flat and slopes to the northwest. Shallow groundwater perches seasonally at the top of bedrock or other competent layers in the subsurface. Transient water also may be encountered within fracture zones and along bedding planes, and frequently discharges at bedrock outcrops (Stohr, St. Ivany, and Williams 1981).

The hydrologic gradient at the Site is not known but may be inferred to be consistent with the topographic gradient, which extends primarily in the north-northwest direction. Groundwater depth and direction likely vary with seasonal changes, precipitation, and other unknown hydrogeologic features.

The static water level, measured at the Site during the Quarter 1 sampling event, was approximately 962 to 970 ft amsl.

2.2.3 Hydrology

Most of the Site is flat and slopes to the north-northwest toward U.S. Highway 49 and to the Missouri River beyond, which is approximately 3.4 miles north-northwest of the Site.

2.2.4 Meteorology

Annual average rainfall in the City of Kansas City, Missouri is 37 inches. Average summer highs are approximately 89 degrees Fahrenheit (°F). Average winter lows are approximately 21°F (National Weather Service 2022).

2.3 SITE HISTORY AND LAND USE

The Site has been developed since at least 1896 and has included mixed residential and commercial areas, with Prospect Avenue as a commercial corridor and residential properties west of Prospect Avenue. A 5,000-square-foot building was present on the 3012 Prospect Avenue property from as early as 1951 through 2017, when it was demolished (SCS 2018). Historically, commercial and retail businesses at that parcel included automobile service facilities, filling stations, and dry cleaners.

2.4 ADJACENT PROPERTY USE

Surrounding properties have been developed since the late 1800s and early 1900s, and historically have hosted residential properties and various commercial businesses, including automobile service facilities, filling stations, printing facilities, and dry cleaners (SCS 2018).

2.5 SUMMARY OF PREVIOUS ASSESSMENTS

Multiple Phase I and Phase II ESAs have occurred at the Site. During Phase I ESA investigations, the parcels comprising the Site were found to have previously hosted retail businesses including automobile service facilities, filling stations, and dry cleaners. Phase II ESA investigations have detected high concentrations in soil, soil gas, and groundwater of petroleum compounds and additives, and chlorinated solvents commonly associated with dry cleaning activities, and their breakdown products.

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 4
SITE 8 – 31st & PROSPECT DEVELOPMENT SITE
KANSAS CITY, MISSOURI**

The Toeroek Team performed the initial (Quarter 1) sampling event for this Phase II ESA from January 11 through 14, 2022 (Toeroek 2022a). Activities included sampling of subsurface soil, soil gas, and groundwater, and installation of three permanent groundwater monitoring wells. Monitoring wells MW-1 and MW-3 were screened from approximately 12 to 22 ft bgs, and MW-2 was screened from approximately 15 to 25 ft bgs, into the top of the shale bedrock layer.

Low to moderate concentrations of VOCs were detected in nearly all soil, soil-gas, and groundwater samples. Concentrations of multiple chemicals of concern (COCs) exceeded Missouri Risk-based Corrective Action (MRBCA) Lowest Default Target Levels (LDTLs) in all media, and EPA Maximum Contaminant Levels (MCLs) in groundwater (Toeroek 2022a). Compounds that exceeded LDTLs were then compared to MRBCA Tier 1 Risk-based Target Levels (RBTLs). The MRBCA RBTLs assumed residential land use and clayey soil.

- Benzene concentration exceeded the MRBCA Tier 1 Risk-based Target Level (RBTL) for indoor air in one soil-gas sample.
- Concentrations of tetrachloroethene (PCE) and trichloroethene (TCE) exceeded their respective EPA MCLs and MRBCA LDTLs in all three groundwater samples.
- Concentrations of PCE also exceeded the respective MRBCA RBTLs in the groundwater sample collected from monitoring well MW-2.

The Toeroek Team conducted the second quarterly (Quarter 2) sampling event on April 19, 2022 (Toeroek 2022b). Activities consisted of sampling the three groundwater monitoring wells previously installed during the Quarter 1 sampling event in January 2022.

All groundwater samples collected at the Site during the Quarter 2 sampling event contained low to moderate concentrations of COCs.

- At monitoring well MW-1, PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs but not RBTLs.
- At monitoring well MW-2, PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs. PCE concentration also exceeded the MRBCA RBTL. 1,1,2-Trichloroethane (TCA) concentration exceeded the MRBCA LDTL but not the RBTL.
- At monitoring well MW-3, PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs. 1,1,2-TCA concentration exceeded the MRBCA LDTL. None exceeded RBTLs.

The Toeroek Team performed the third quarterly (Quarter 3) sampling event on July 8, 2022 (Toeroek 2022c). Activities consisted of sampling the three groundwater monitoring wells previously

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 4
SITE 8 – 31st & PROSPECT DEVELOPMENT SITE
KANSAS CITY, MISSOURI**

installed during the Quarter 1 sampling event in January 2022, as well as soil-gas sampling at eight locations previously sampled during the Quarter 1 sampling event.

All groundwater samples collected at the Site had low to moderate concentrations of COCs. The laboratory detected the following COCs: benzene, *cis*-1,2-dichloroethene (DCE); *trans*-1,2-DCE; isopropylbenzene (cumene); methylene chloride; PCE; and TCE. COC exceedances included:

- At monitoring well MW-1, PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs but not the RBTLs.
- At monitoring well MW-2, PCE and TCE concentrations exceeded their respective EPA MCLs, MRBCA LDTLs, and MRBCA RBTLs.
- At monitoring well MW-3, PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs. *Cis*-1,2-DCE concentration exceeded the respective EPA MCL and MRBCA LDTL, but not the RBTL.

No soil-gas sample yielded any COC at a concentration exceeding the corresponding MRBCA RBTL screening level for indoor air.

3.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT ACTIVITIES

The following subsections describe the scope, field exploration, and methods implemented during the Phase II ESA, Quarter 4 sampling event. On December 19, 2022, Toeroek Team member Thomas Kaley conducted groundwater sampling of the three groundwater monitoring wells previously installed during the Quarter 1 sampling event. Soil-gas sampling was not required during this sampling event. Field activities were documented in a logbook ([APPENDIX B](#)).

3.1 SCOPE OF THE ASSESSMENT

The Toeroek Team performed environmental sampling to assess the current level of contamination in groundwater at the Site. Sampling was consistent with the Quality Assurance Project Plan (QAPP) approved by EPA on November 4, 2021 (Toeroek 2021).

3.1.1 Sampling Plan

The proposed sampling scheme for this project incorporated a combination of biased/judgmental sampling with definitive laboratory analysis, in accordance with procedures included in the *Guidance for Performing Site Inspections Under CERCLA* (Office of Solid Waste and Emergency Response [OSWER] Directive #9345.1-05, September 1992). The objective of the groundwater sampling was to characterize possible releases to the environment. [Figure 2](#) in [APPENDIX A](#) depicts sampling locations at the Site. Three groundwater samples were collected, one at each of three permanent groundwater monitoring well locations, MW-1, MW-2, and MW-3.

3.1.2 Chemical Testing Plan

Laboratory analyses for chemical parameters were selected based on likely present contaminants associated with current and historical uses of the Site, and results from previous investigations. All groundwater samples were submitted to Pace Analytical (Pace) in Lenexa, Kansas, for VOCs analysis via EPA Method 8260.

3.1.3 Deviations from the QAPP

There were no deviations from the QAPP.

3.2 FIELD ACTIVITIES

Quarter 4 field activities occurred at the Site on December 19, 2022. Groundwater samples were submitted to Pace on December 19, 2022. The following subsections summarize groundwater sample collection activities. Sampling locations are depicted on [Figure 2](#) in [APPENDIX A](#).

3.2.1 Groundwater Sampling

The Toeroek Team collected groundwater samples from three groundwater monitoring wells previously installed during the Quarter 1 sampling event in January 2022 ([APPENDIX A](#), [Figure 2](#)).

Samples were collected after at least three well volumes of water had been purged from each well by use of a bailer. The Toeroek Team measured temperature, pH, specific conductivity, and turbidity using a Horiba U-52 Series water meter. Parameters were monitored during purging until stabilization (no greater than 10 percent change over three consecutive readings). Samples were collected into three 40-milliliter (mL) volatile organic analysis (VOA) vials preserved with hydrochloric acid. Samples were analyzed for VOCs via EPA Method 8260. [Table 1](#) summarizes groundwater levels and samples collected during this Phase II ESA, Quarter 4 sampling event.

TABLE 1

**GROUNDWATER LEVEL AND SAMPLE SUMMARY, QUARTER 4
31st & PROSPECT DEVELOPMENT SITE**

Location ID(s)	Depth to Groundwater (ft btoc)	Static Water Level (ft amsl)	Analysis Performed	
MW-1	13.18	971.66	VOCs via EPA Method 8260	
MW-2	15.95	968.10		
MW-3	14.71	968.18		
MW-3-DUP				

Notes:

- DUP Duplicate
EPA U.S. Environmental Protection Agency
ft amsl Feet above mean sea level
ft btoc Feet below top of casing
MW Monitoring well
VOC Volatile organic compound

3.2.2 Quality Control Sampling

Field quality control (QC) samples for this investigation included one laboratory-supplied aqueous trip blank and one groundwater field duplicate collected at MW-3. Pace analyzed the QC samples for VOCs.

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 4
SITE 8 – 31st & PROSPECT DEVELOPMENT SITE
KANSAS CITY, MISSOURI**

Analytical data from the trip blank were referenced to determine whether contamination had been introduced in the field and/or during transportation of containers and samples. The field duplicate was collected to determine total method precision. Analytical results from field duplicate samples were used to calculate the relative percent difference (RPD) between results from the duplicate and associated field sample for each reported analyte. The RPDs served informational purposes only; however, the higher concentration of each analyte in the duplicate sample pair was compared to the associated screening level. Analytical accuracy was determined via analysis of laboratory-prepared spikes and duplicates. RPDs are discussed with the applicable data validation reports in [APPENDIX C](#).

4.0 EVALUATION AND PRESENTATION OF RESULTS

The following subsections present analytical data from groundwater samples collected during the Phase II ESA, Quarter 4 sampling event. Groundwater sample results were compared to EPA MCLs (EPA 2022), MRBCA LDTLs, and MRBCA Tier 1 residential RBTLs for Type 3 (clayey) soils. Copies of analytical data packages and data validation reports are in [APPENDIX C](#). [Table 2](#) lists all detections of VOCs in groundwater. [Figure 3](#) in [APPENDIX A](#) shows detections of VOCs exceeding MRBCA screening levels and/or EPA MCLs in groundwater. Tables summarizing results from previous quarterly sampling events are in [APPENDIX D](#).

4.1 GROUNDWATER SAMPLES

Three groundwater samples were collected, one from each of monitoring wells MW-1, MW-2, and MW-3. The sample from MW-3 was collected as a duplicate pair.

The laboratory detected the following COCs in groundwater samples collected from MW-1, MW-2, and MW-3: benzene, *cis*-1,2-DCE; *trans*-1,2-DCE; isopropylbenzene (cumene); methylene chloride; PCE; and TCE. COC exceedances included:

- MW-1: PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs. Neither exceeded the RBTLs.
- MW-2: PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs. PCE also exceeded the corresponding MRBCA RBTL. The reporting limit for benzene in MW-2 was greater than the EPA MCL and MRBCA LDTL; therefore, it is unknown if the benzene concentration exceeded either. The reporting limit for benzene was lower than the RBTL.
- MW-3: PCE, TCE, and *cis*-1,2-DCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs in both the original and duplicate sample. None exceeded the RBTLs.

The MRBCA RBTL assumed clayey soil and a primary risk from vapor inhalation. No other COC was detected at concentrations exceeding its MRBCA screening level or EPA MCL.

PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 4
SITE 8 – 31st & PROSPECT DEVELOPMENT SITE
KANSAS CITY, MISSOURI

TABLE 2

DETECTED VOC RESULTS FROM GROUNDWATER SAMPLES, QUARTER 4
31st & PROSPECT DEVELOPMENT SITE

Sample Location	Benzene	<i>cis</i> -1,2-DCE	<i>trans</i> -1,2-DCE	Cumene	PCE	TCE
	EPA MCL					
	5	70	100	NE	5	5
	MRBCA LDTL (All Soil Types, All Pathways)					
	5	70	100	330	5	5
	MRBCA RBTL (Tier 1, Residential Land Use, Groundwater, Indoor Inhalation of Vapor Encroachment, Clayey)					
	2,880	19,400	17,800	10,600	928	4,490
MW-1	<0.14	1.7	<0.10	<0.097	28.9	8.9
MW-2	<13.6*	<12.9	<10.2	<9.7	6,170	68.6 J
MW-3	2.9 J	102	1.2 J	1.6 J	508	181
MW-3-DUP	3.1 J	101	1.2 J	1.5 J	530	182

Notes:

All values are in micrograms per liter ($\mu\text{g/L}$).

Bold font indicates the concentration exceeds the MCL and/or LDTL.

Red text indicates the concentration exceeds the RBTL.

*Reporting limit is greater than EPA Action Level.

EPA	U.S. Environmental Protection Agency
DCE	Dichloroethene
DUP	Field duplicate
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
LDTL	Lowest Default Target Level, for these compounds all linked to protection for domestic groundwater use pathway
MCL	Maximum Contaminant Level (EPA 2022)
MRBCA	Missouri Risk-based Corrective Action (Missouri Department of Natural Resources 2006)
MW	Monitoring well
NE	Not established
PCE	Tetrachloroethene
RBTL	Risk-based Target Level
TCE	Trichloroethene
VOC	Volatile organic compound

4.2 QUALITY CONTROL SAMPLES

Pace analyzed QC samples for VOCs. The trip blank contained methylene chloride, a common laboratory contaminant, at an estimated concentration between the method detection limit and the reporting limit.

However, methylene chloride was not detected in any of the samples, so no results were qualified as a result of this detection.

Calculated RPDs between data from groundwater sample MW-3 and duplicate MW-3-FD indicated good precision. All analytes were within acceptance limits, qualifying those data as reliable.

5.0 DISCUSSION OF SIGNIFICANT FINDINGS AND CONCLUSIONS

This section summarizes significant findings and offers conclusions regarding the Phase II ESA, Quarter 4 sampling event.

All groundwater samples collected at the Site had low to moderate concentrations of COCs. The laboratory detected the following COCs: benzene, *cis*-1,2-DCE; *trans*-1,2-DCE; cumene; PCE; and TCE. COC exceedances included:

- PCE and TCE concentrations exceeded their respective EPA MCLs and MRBCA LDTLs in all samples.
- *Cis*-1,2-DCE concentration exceeded the corresponding EPA MCL and MRBCA LDTL in samples from MW-3 and MW-3-DUP.
- The reporting limit for benzene in MW-2 was greater than the EPA MCL and LDTL in the sample from MW-2; therefore, it is unknown if benzene concentration exceeded these levels in that sample.
- Only the concentration of PCE in the sample from MW-2 exceeded the RBTL.
- No other COC was detected at a concentration exceeding an MRBCA screening level or EPA MCL.

APPENDIX B
LOGBOOK

12/19/22

- 1205 T. Kaley arrived on site
 1215 Depth to water at MW-3 is 14.71 ft bgs. Total depth is 20.91 ft. Three well volumes equal approximately 3.05 gallons.

1235 First Volume:

Temp: 16.4 SFC: --

PH: 6.56 DFO: --

SPCon: 3.06 Temp: 3.73

Second volume:

Temp: 15.3 Turb: 2.14

PH: 6.62

SPCon: 3.01

Third volume:

Temp: 14.4 Turb: 1.87

PH: 6.60

SPCon: 2.68

1250 Collected sample [MW-3] and [MW-3-DUP]

1300 Depth to water at MW-2 is 15.6 ft. Total is 24.39 ft. Three well volumes = 4.1 gallons approximately

First volume:

Temp: 13.2 SFC: 1530

PH: 6.97 Turb: 1.09

12/19/22

Second Volume

Temp: 13.7 Turb: 1.10

PH: 6.95 SPCon: 1651

Third Volume

Temp: 13.1 SPCon: 1515

PH: 6.99 Turb: 1.08

1320 Collected sample [MW-2]

1330 Depth to water at MW-1 is 13.18 ft. Total depth is 21.53 ft. Three well volumes = 4.08 gallons

1340 First Volume

Temp: 13.6 SPCon: 3.12

PH: 6.33 Turb: 2.21

Second Volume

Temp: 14.3 SPCon: 3.20

PH: 6.36 Turb: 2.24

Third Volume

Temp: 13.1 SPCon: 3.25

PH: 6.41 Turb: 2.34

1350 Collected sample [MW-1]

1400 Travel from site to KC office

1430 Collected Sample [Trip Blank]

1435 Finished for the day

12/19/22

Rate in the Rain.

ANALYTICAL DATA PACKAGES AND DATA VALIDATION REPORTS

December 29, 2022

Emily Fisher
TETRA TECH EMI
415 Oak
Kansas City, MO 64106

RE: Project: 31ST & PROSPECT
Pace Project No.: 60418378

Dear Emily Fisher:

Enclosed are the analytical results for sample(s) received by the laboratory on December 19, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church
jamie.church@pacelabs.com

QUALIFIERS

Project: 31ST & PROSPECT
Pace Project No.: 60418378

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

DG9B	40mL bisulfate clear vial	BP3F	250mL HNO3 plastic - field filtered
DG9H	40mL HCl amber vial	BP3N	250mL HNO3 plastic
DG9M	40mL MeOH clear vial	BP3U	250mL unpreserved plastic
DG9Q	40mL TSP amber vial	BP3S	250mL H2SO4 plastic
DG9S	40mL H2SO4 amber vial	BP3Z	250mL NaOH plastic
DG9T	40mL Na Thio amber vial	BP4U	125mL unpreserved plastic
DG9U	40mL amber unpreserved	BP4N	125mL HNO3 plastic
VG9H	40mL HCl clear vial	BP4S	125mL H2SO4 plastic
VG9T	40mL Na Thio. clear vial	WPDU	16oz unpreserved plastic

Work Order Number:

60418378

DATA VERIFICATION REPORT

Prepared by: Ellen McEntee
Date: January 11, 2023
Site Name/Task Order: 31st & Prospect Site / 103G65210190
Laboratory: Pace Analytical Services – Lenexa, Kansas
Data Package or SDG Number: 60418378

Sample Designations/Names:

MW-1	MW-2	MW-3	MW-3-DUP	TRIP BLANK
------	------	------	----------	------------

Matrices: Groundwater

Analytical Parameters: Volatile Organic Compounds (VOCs) by EPA Method 5030B/8260

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Chain-of-custody	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Data package completeness	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Sample preservation, storage, and holding times	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Method and field blank contamination	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Methylene chloride was detected in the Trip Blank at a concentration above the method detection limit (MDL), but below the reporting limit (RL). The associated results for methylene chloride are non-detect; therefore, results were not qualified. The method blank was non-detect for all analytes.
Surrogate spikes	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Matrix spikes/matrix spike duplicates (MS/MSD)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Matrix spikes were not performed with these samples.
Laboratory control samples/Laboratory control sample duplicates (LCS/LCSD)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Other (field duplicates)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Summary Data is usable as reported by the laboratory. Results reported between the MDL and the RL were qualified as estimated (flagged J) by the laboratory.				

APPENDIX D
HISTORICAL ANALYTICAL RESULTS

Notes:

All values are in micrograms per kilogram ($\mu\text{g}/\text{kg}$).

Bold font indicates the concentration exceeds the reporting limit.

Italic font indicates the concentration exceeds the LDTL.

*The LDTL is based on the indoor inhalation pathway.

DCE	Dichloroethene
GWP	Protection of domestic groundwater use pathway
INH	Indoor inhalation pathway
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
J+	Estimated concentration with a possible high bias
J-	Estimated concentration with a possible low bias
LDTL	Lowest Default Target Level
MRBCA	Missouri Risk-based Corrective Action
NE	Not established
PCE	Tetrachloroethene
RBTL	Risk-based Target Level
SB	Soil boring
TCE	Trichloroethene
TMB	Trimethylbenzene
VOC	Volatile organic compound
