Ms. Lisa Dunning  
Task Order Contracting Officer's Representative  
U.S. Environmental Protection Agency, Region 7  
11201 Renner Boulevard  
Lenexa, Kansas 66219

**Subject: Contract No. 68HERH19D0018; Task Order No. 68HE0719F0190  
Former Clinton Engines  
605 and 607 East Maple Street, Maquoketa, Jackson County, Iowa  
Phase II Environmental Site Assessment, Quarter 2**

Dear Ms. Dunning:

Toeroek Associates, Inc. (Toeroek) and our teaming subcontractor, Tetra Tech, Inc. (Tetra Tech), (hereafter "Toeroek Team") are pleased to present the Phase II Environmental Site Assessment (ESA), Quarter 2 report regarding the Former Clinton Engines site at 605 and 607 East Maple Street in Maquoketa, Jackson County, Iowa.

This deliverable has been reviewed internally as part of Tetra Tech's quality assurance program, as well as Toeroek's quality assurance program, and is consistent with Toeroek's Quality Management Plan for the Resource Conservation and Recovery Act (RCRA) Enforcement and Permitting Assistance (REPA) contract. Documentation of this review is retained in the Toeroek Team's project files.

If you have any questions or comments, please contact Greg Hanna at 720-898-4102 or Kaitlyn Mitchell at 816-412-1742.

Sincerely,

A handwritten signature in black ink, appearing to read "Greg Hanna".

Greg Hanna  
Toeroek Team Program Manager

A handwritten signature in blue ink, appearing to read "Kaitlyn Mitchell".

APPENDIX D ANALYTICAL DATA PACKAGE AND DATA VALIDATION REPORT

## 1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) tasked Toeroek Associates, Inc. (Toeroek) and its teaming subcontractor, Tetra Tech, Inc. (Tetra Tech) (together, the “Toeroek Team”) with providing technical support to the EPA Region 7 Brownfields Program under Contract Number (No.) 68HERH19D0018, Task Order No. 68HE0719F0190. EPA Region 7 requested the Toeroek Team conduct a Phase II Environmental Site Assessment (ESA) as part of a Targeted Brownfields Assessment of the Former Clinton Engines site (the Site). The focus of this Phase II ESA is 605 and 607 East Maple Street in Maquoketa, Jackson County, Iowa, and the wells associated with the Site on surrounding properties ([Appendix A](#), Figures 1 and 2).

The Toeroek Team did not conduct a Phase I ESA of the Site. The Toeroek Team developed the Phase II ESA based on results of the following previous investigations: (1) Missman, Stanley, & Associates P.C. (MSA) 1999 Phase I and II ESA (MSA 1999); (2) 2007 enrollment application submitted by the City of Maquoketa (City) for the Iowa Department of Natural Resources (IDNR) Land Recycling Program (LRP), including the Forest Road Consultants’ 2006 Work Plan and TestAmerica analytical data (City 2007); (3) Impact7G, Inc. (Impact7G) 2013 Site Assessment, 2014 Site Assessment, and 2019 Supplemental Phase II ESA reports under direction from the IDNR LRP (Impact7G 2013, 2014, 2019); and (4) Superfund Technical Assessment and Response Team START() 2021 Integrated Site Assessment (Tetra Tech 2021).

The scope of the Phase II ESA included collection of subsurface soil, groundwater, and soil-gas samples to determine plume dynamics and assess horizontal and vertical plume stability. Initial sampling and installation of monitoring wells was in October and November 2022. The Toeroek Team now is sampling these monitoring wells quarterly. This report details the second (Quarter 2) sampling event at the Site conducted in February 2023.

This Phase II ESA, Quarter 2, report is consistent with ASTM International Standard E1903-19 for Phase II ESAs, and otherwise complies with EPA’s “All Appropriate Inquiries” Rule (40 *Code of Federal Regulations* Part 312).

### 1.1 PURPOSE

Purposes of the Phase II ESA were to: (1) confirm or eliminate Recognized Environmental Conditions (RECs) identified during previous investigations; (2) acquire information regarding natures and concentrations of contaminants present at the Site in soil and/or groundwater; (3) assess potential impacts

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 2  
SITE 9 – FORMER CLINTON ENGINES  
MAQUOKETA, IOWA**

---

on the Site and risks posed by hazardous substances that would support informed business decisions about the Site; and (4) where applicable, satisfy the innocent purchaser defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

**1.2 SPECIAL TERMS AND CONDITIONS**

No special terms or conditions were identified during the Phase II ESA.

## **2.0 BACKGROUND AND SITE HISTORY**

This section specifies the location of the Site and its features, describes the physical setting, recounts the history of the Site, discusses land uses at the Site and adjacent properties, and relates results of previous investigations.

### **2.1 SITE DESCRIPTION AND FEATURES**

The Site is in Maquoketa, Jackson County, Iowa. It is a former industrial site in a mixed-use area consisting of residential, agricultural, and commercial land. The Site encompasses three Jackson County parcels and approximately 10.86 acres of land (Beacon 2022). Coordinates at the approximate center of the Site are 42.065375 degrees north latitude and 90.657173 degrees west longitude. The Site is in Section 19, Township 84 North, Range 3 East, as depicted on the Maquoketa, Iowa, 7.5-minute topographic map (U.S. Geological Survey [USGS] 1980).

Beginning in approximately 1945, the Site hosted industrial operations that included production of small engines. The Clinton Engines Company (Clinton Engines) acquired the property in 1950 from the Maquoketa Company and continued production of small engines. During the 1999 Phase I and Phase II ESA, the machine shop, shipping and receiving, and one of the paint booths were in active use. The Phase I ESA report described other portions of the Site facility as dilapidated, with holes in the roof and walls and standing water. Former operations included a foundry and die casting. Apparent underground storage tanks (USTs), chemical storage rooms, and 55-gallon drums were noted in various areas (MSA 1999). Clinton Engines officially closed in 1999, and the property was donated to the City in 2000 (IDNR 2020). In 2004, the Jackson County Historical Society purchased the western parcel from City (Beacon 2022). Review of aerial photographs indicate that most facility buildings had been razed by 2004, with only a former office/administration building left standing (Historic Aerials 2023). This building has been converted into the Clinton Engines Museum. Several buildings associated with the museum have been constructed at the Site after razing of the original manufacturing buildings.

### **2.2 PHYSICAL SETTING**

The Site lies within the Maquoketa city limits. It is bounded north by East Maple Street, with commercial or industrial properties beyond; east by a metal barn/residence (at a former railroad grade) and a farm center; south by residential properties and farmland; and west by South Clark Street, with residential properties beyond. Elevation of the Site is approximately 700 feet above mean sea level (amsl), with a

slight slope to the north and northeast. Higher elevations are off-site to the south and southwest, with elevations reaching approximately 750 feet amsl.

### **2.2.1 Geologic Setting**

The Site is in the Central Lowlands physiographic province of the United States. Jackson County is in eastern Iowa near the boundary of the Southern Iowa Drift Plain and the Iowan Surface. Locally, a moderate loess cover overlies a thin glacial drift layer (City of Maquoketa & Alliance Water, Iowa Rural Water Association 2014). The Southern Iowa Drift Plain is characterized by a steeply rolling landscape, with the eastern part dominated by tabular uplands. Surfaces of the Southern Iowa Drift Plain are cut deeply into the Pre-Illinoian glacial drift and are overlain by various thicknesses of Wisconsinan loess. The Iowan Surface is more eroded with gently sloping hills and valleys (Iowa Geological Survey [IGS] 2022a).

Soils at the former manufacturing area at the Site are characterized as urban land, which is generally flat and has been altered by buildings, parking lots, and cut and fill to render the soil unidentifiable. The lawn area surrounding the museum to the northwest is classified as well-drained Worthen silt loam, with 2 to 5 percent slopes, that derived from silty alluvium. The railroad grade area to the east is classified as Orthents, loamy, with 1 to 5 percent slopes. Soils south and southwest of the Site (at higher elevations) are classified as Tama silt loams, driftless, with slopes of 5 to 14 percent, that derived from loess (U.S. Department of Agriculture [USDA] 2022).

In April 2014, Impact7G advanced two bore holes (BHs), BH-1 and BH-2, at the Site to obtain information about geology of the Site. BH-1 was in the south-central portion of the Site, and BH-2 was in the north-central part of the Site. BH-1 was advanced to 38 feet below ground surface (bgs), where the boring encountered carbonate (likely dolomite) bedrock. Materials logged in the hole were primarily silt with some clay layers. Interspersed in the silt and clay were fine and medium sands from 12 to 22, 29 to 30, and 35 to 37 feet bgs. BH-2 was advanced to 90 feet bgs. This boring also contained primarily silt with more clay from 75 to 90 feet bgs, at which depth carbonate (dolomite) bedrock was encountered. Fine to medium sands were logged from 18 to 25 and 58 to 64 feet bgs. The water table was encountered at depths ranging from 13 to 16 feet bgs (Impact7G 2014).

The IGS 1992 Guidebook 56 *Quaternary Drainage Evolution of the Maquoketa River Valley* identifies an ancient Maquoketa River channel underlying the City. Delineation of the channel was based on bedrock depths in the area that ranged to approximately 155 feet bgs. The ancient channel having depths

exceeding 100 feet bgs trends north-south to the central areas of the City, then trends northeast (Ludvigson, Bettis, and Hudak 1992). Alluvial deposits within the channel would be in lateral contact with shallower bedrock along the sides.

The bedrock geology map of northeast Iowa indicates that uppermost bedrock in the Maquoketa area is Silurian-aged Hopkinton and Blandings Formations consisting of a maximum of 330 feet of dolomite, fossil-moldic to vuggy, and non-cherty to cherty (IDNR 1998). During the Phase II ESA investigation, weathered, vuggy, fossiliferous dolomitic bedrock was encountered at depths ranging from 21 feet bgs at the Jackson County Fairgrounds, approximately 0.6 mile northeast of the Site, to 117 feet bgs, approximately 1,000 feet west of the Site.<sup>1</sup>

## **2.2.2 Hydrogeology**

Silurian carbonate rocks make up the uppermost bedrock in the vicinity of the Site. The stratigraphic log for City Well 6, approximately 0.3 mile southwest of the Site, begins at 125 feet bgs in Silurian (undifferentiated) deposits and reaches a total depth of 2,325 feet (IGS 2022b). The Ordovician Maquoketa Formation (mainly shale) was encountered from 245 to 270 feet bgs and is considered an aquitard protecting the underlying aquifers. Cambrian rocks below the St. Lawrence Formation (encountered approximately 1,200 feet bgs) are indicated as the aquifer supplying City Wells 4, 5, and 6 (IGS 2022b).

Porous Silurian dolomites form the uppermost bedrock aquifer. In eastern and northern Iowa, the average thickness is approximately 200 to 400 feet. Based on depth of the underlying Ordovician Maquoketa Formation listed for City Well 6, wells tapping this aquifer would be less than approximately 245 feet deep.

The Cambrian-Ordovician aquifer has been extensively developed for municipal and industrial supplies, and yields range from 100 to 2,300 gallons per minute (gpm). Yields of 1,000 gpm can be obtained in all but the easternmost part of the aquifer area if drawdown of water levels is not a major concern (USGS 1978).

The upper part of the Cambrian-Ordovician Aquifer consists of the Ordovician St. Peter Sandstone and Prairie du Chien Formation and the Cambrian Jordan Sandstone. Wells completed in the Jordan

---

<sup>1</sup> Bedrock was encountered at 122 feet bgs approximately 750 feet south of the Site; however, this location is approximately 45 feet higher in elevation.

Sandstone typically produce at least 50 gpm, with yields up to 300 gpm; however, high yields generally depend on thickness and degree of cementation of the Jordan Sandstone (USGS 1978).

The lower part of the Cambrian-Ordovician Aquifer consists of three Cambrian formations (Wonewoc, Eau Claire, and Mt. Simon), collectively referred to as the “Dresbach” aquifer. Yields in the Dresbach aquifer range from 280 to 2,560 gpm, and commonly yield at least 500 gpm. Yields are highest near Clinton, Iowa, decreasing westward, where water quality becomes poor. The Maquoketa area is an exception to this, as City Wells 4, 5, and 6 have high production capacities from this aquifer. Geologic data indicate this may be due to faulting within the Plum River fault zone, bringing the higher quality water in the Jordan Sandstone into juxtaposition with the Galesville Sandstone Member of the Wonewoc Formation (City of Maquoketa & Alliance Water, Iowa Rural Water Association 2014).

### **2.2.3 Hydrology**

Most of the Site is gently sloping (north and northeast) or flat with elevations of approximately 700 feet amsl. Higher elevations (approximately 750 feet amsl) are off-site to the south and west, and lower elevations (approximately 680 feet amsl) are farther north and east, near the Maquoketa River (approximately 0.8 to 2 miles north of the Site) or Prairie Creek (approximately 0.8 mile east of the Site). Surface water likely flows into the stormwater sewer system or generally northeast toward Prairie Creek.

## **2.3 SUMMARY OF PREVIOUS ASSESSMENTS**

In 1999, MSA conducted a Phase II ESA of the Site. Tables B-1, B-2, and B-3 in [Appendix B](#) summarize soil, groundwater and soil-gas data for volatile organic compounds (VOCs) from that assessment. The 1999 Phase II ESA found concentrations of chlorinated VOCs (CVOCs) and benzene, toluene, ethylbenzene, and xylene (BTEX) VOCs in groundwater and soil that exceeded risk-based screening levels and, for groundwater, EPA maximum contaminant levels (MCLs).

On May 23, 2005, IDNR notified the City regarding the transfer of the Site to the Contaminated Sites Section within IDNR (IDNR 2005a). Results from an Initial Site Screening, completed on June 2, 2005, indicate the need for additional investigations at the Site (IDNR 2005b). The Site was enrolled in the IDNR Voluntary LRP in April 2008. According to the Voluntary LRP enrollment application, additional Site investigation activities occurred in 2006 (City 2007). Analytical results from the 2006 sampling event are in Table B-1 and Table B-2 in [Appendix B](#).

The 2006 groundwater sampling event at the Site found elevated concentrations of BTEX and CVOCs. Further, the enrollment application included information pertaining to removal of three additional USTs (two 20,000-gallon diesel tanks and one 8,000-gallon tank of unidentified contents) from 2001 to 2002 (City 2007).

Since 2006, further Site assessment activities have been sporadic, focusing primarily on delineation of extents of on-site and off-site groundwater contamination and on-site vapor intrusion (VI). CVOCs at the following maximum concentrations have been detected in groundwater samples from on-site groundwater monitoring wells and off-site temporary wells as far as 900 feet north-northwest of the Site:

- Trichloroethene (TCE) at 9,580 micrograms per liter ( $\mu\text{g}/\text{L}$ ), off-site temporary well;
- *cis*-1,2-Dichloroethene (DCE) at 7,190  $\mu\text{g}/\text{L}$ , off-site temporary well;
- *trans*-1,2-DCE at 1,044  $\mu\text{g}/\text{L}$ , off-site temporary well;
- 1,1,2-Trichloroethane (TCA) at 132  $\mu\text{g}/\text{L}$ , off-site temporary well;
- Vinyl chloride (VC) at 319  $\mu\text{g}/\text{L}$ , off-site temporary well; and
- Toluene at 247,000  $\mu\text{g}/\text{L}$ , on-site groundwater monitoring well (Impact7G 2019).

Additional Site investigation activities in 2013 included sampling of groundwater monitoring wells that had been installed during previous investigations (Impact7G 2013). Available groundwater and soil data are in Table B-1 and Table B-2 in [Appendix B](#).

Given the elevated CVOCs concentrations in groundwater, IDNR required indoor VI sampling at the museum (IDNR 2014). Sub-slab samples collected at the museum in 2014 and 2015 detected TCE at concentrations above risk-based screening levels. In response, cracks in the museum basement were repaired, chemicals stored in the basement were relocated, and the sump pit area was passively vented. In December 2019, follow-up indoor air sampling at the museum documented indoor air exceedances above risk-based screening levels. As a result, energy recovery ventilators (ERVs) were installed at the museum in September 2020 (IDNR 2020). Available VI sampling results for selected VOCs are in Table B-3 in [Appendix B](#).

IDNR requested federal assistance in a letter dated February 17, 2020, regarding potential impacts of off-site groundwater contamination on nearby residential and commercial properties (IDNR 2020). IDNR also requested assistance related to VI sampling at surrounding properties near areas of known groundwater contamination to further determine potential impacts (Tetra Tech 2021).

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 2  
SITE 9 – FORMER CLINTON ENGINES  
MAQUOKETA, IOWA**

---

In 2020 and 2021, Tetra Tech, under its START contract, collected indoor air, soil-gas, soil, and drinking water samples at the Site and at nearby residential and commercial properties. No CVOCs were detected in soil gas. No VOCs were detected in soil, sub-slab vapor, or indoor air at a concentration that exceeded a removal management level. No VOCs were detected in drinking water at a concentration that exceeded EPA MCLs (Tetra Tech 2021).

The 2022 Phase II ESA by the Toeroek Team included soil, groundwater, and soil-gas sampling (Toeroek Team 2023). Toluene was detected in 17 of the 21 subsurface soil samples, often at low concentrations (estimated at less than 1.0 micrograms per kilogram [ $\mu\text{g}/\text{kg}$ ]) where no other fuel-related VOCs were present, suggesting laboratory contamination may have occurred. High toluene concentrations (greater than 100  $\mu\text{g}/\text{kg}$ ) detected in samples MW-1B (19 to 21 ft bgs) and MW-8B (14 to 16 ft bgs) were found with other fuel-related VOCs. Samples from MW-102 and MW-103 contained only low levels of toluene suggestive of laboratory contamination. TCE concentrations in five on-site soil samples exceeded EPA's Regional Screening Levels (RSL) for both residential and industrial soils. No other analyte concentrations in any soil samples exceeded an associated RSL. No analyte concentration in any sample exceeded an associated IDNR Statewide Standard (SWS) for soils (Toeroek Team 2023).

In October and November 2022, during the Phase II ESA, the Toeroek Team installed 17 monitoring wells, including four bedrock wells, seven delineation wells, and six vertical gradient wells. The bedrock wells were designed to assess deeper groundwater at a greater distance from the Site. The delineation wells were to determine horizontal plume boundaries, and the vertical gradient wells were designed to characterize vertical contamination profiles paired with pre-existing shallower monitoring wells (Toeroek Team 2023). Ground water was not encountered at the proposed location of monitoring well MW-5; therefore, well installation was not completed at this location. Approximate locations of monitoring wells are depicted on Figure 2 in [Appendix A](#).

Groundwater samples were collected from the 17 newly-installed monitoring wells installed by the Toeroek Team in November 2022. [Table 1](#) summarizes information regarding the monitoring wells and VOCs concentrations from the November 2022 sampling event. Sampling data from the 2022 Phase II ESA are in Table B-4 and Table B-6 in [Appendix B](#).

MW-104	77-87	85.78	17.39	684.785	667.395

Notes:

\* Monitoring wells MW-4B, MW-6B, and MW-11 have aboveground completions; remaining wells are flush-mount.

No well was installed in the boring advance for MW-5B because a deeper groundwater zone was not encountered.

amsl	Above mean sea level	FD	Field duplicate
bgs	Below ground surface	ft	Feet
btoc	Below top of casing	MW	Monitoring well

TCE and its common degradation products were detected in all on-site monitoring wells except MW-11, near the southeast corner of the Site. TCE concentrations exceeded the MCL in 11 of the on-site samples. In 7 of 11 samples, TCE concentrations also exceeded the IDNR SWS for a non-protected groundwater source. Typically, where TCE levels exceeded these benchmarks, concentrations of *cis*-1,2-DCE and VC also exceeded the benchmarks. The highest CVOC concentrations were detected in samples from on-site monitoring wells MW-8B, MW-10A, and MW-10B, and from the off-site monitoring well MW-12.

Slightly lower concentrations were detected in MW-10B (screened from 63 to 73 feet bgs) than in MW-10A (screened from 47 to 57 feet bgs), suggesting the separating zone has not significantly retarded

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 2  
SITE 9 – FORMER CLINTON ENGINES  
MAQUOKETA, IOWA**

---

downward migration. In addition, low levels of 1,1,1-TCA, 1,1,2-TCA, 1,1-dichloroethane (DCA), and tetrachloroethene (PCE) were detected in several on-site groundwater samples.

No VOCs were detected in samples from upgradient bedrock monitoring wells MW-101 and MW-102, west and south of the Site, respectively. MW-103 and MW-104, northeast and downgradient of the Site contained TCE and 1,2-DCE, but at concentrations below MCLs. At MW-104, bedrock was encountered at 71 feet bgs, and the well was screened from 77 to 87 feet bgs. In contrast, MW-103, approximately 1,500 feet to the east, encountered bedrock at 21 feet bgs and was screened from 27 to 37 feet bgs. The porous shallow bedrock is likely in lateral contact with contaminated groundwater in the sandy alluvial deposits.

Fuel-related VOCs (or constituents of petroleum solvents) were detected in nine samples, with benzene concentration exceeding the MCL in three samples (MW-1B, MW-8B, and MW-10A). No other concentrations of fuel-related VOCs exceeded an associated MCL, and none exceeded an IDNR SWS for non-protected groundwater.

The Toeroek Team collected soil-gas samples from borings adjacent to monitoring wells. VOCs were detected in all soil-gas samples. Detected TCE concentrations in soil-gas samples adjacent to monitoring wells MW-2B, MW-3B, MW-8B, MW-9, MW-10A/B, and MW-11 exceeded the EPA residential Vapor Intrusion Screening Level (VISL). Except for MW9-SG and MW10-SG, TCE concentrations also exceeded the commercial VISL. Soil-gas samples near monitoring wells in roadways were collected from the nearby easement. Numerous fuel-related VOCs were detected in the soil-gas samples; however, no concentration exceeded a VISL benchmark (Toeroek Team 2023).

### **3.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT ACTIVITIES**

The following subsections describe the scope, field exploration, and methods implemented during the Phase II ESA, Quarter 2 sampling event. From February 21 to 23, 2023, Toeroek Team members Thomas Kaley and Clay Weiss sampled 17 monitoring wells previously installed by the Toeroek Team in October and November 2022. Field activities were documented in a logbook ([Appendix C](#)).

#### **3.1 SCOPE OF THE ASSESSMENT**

The Toeroek Team performed environmental sampling to determine if subsurface soils, groundwater, and soil gas are contaminated by historical activities at the Site. Sampling was consistent with the Quality Assurance Project Plan (QAPP) approved by EPA on July 28, 2022 (Toeroek Team 2022).

##### **3.1.1 Sampling Plan**

The proposed sampling scheme for this project incorporated a combination of biased/judgmental sampling with definitive laboratory analysis, in accordance with procedures included in the *Guidance for Performing Site Inspections Under CERCLA* (Office of Solid Waste and Emergency Response [OSWER] Directive #9345.1-05, September 1992). The objective of groundwater sampling was to characterize possible releases to the environment. Figure 2 in [Appendix A](#) depicts sampling locations at the Site. One sample was collected at each of 17 permanent groundwater monitoring well locations: MW-1B, MW-2B, MW-3B, MW-4B, MW-6B, MW-8B, MW-9, MW-10A, MW-10B, MW-11, MW-12, MW-13, MW-14, MW-101, MW-102, MW-103, and MW-104. Of these, two samples were collected as field duplicate pairs—one from MW-3B (identified as MW-X on the chain-of-custody), and the other from MW-10B (identified as MW-Y on the chain of custody).

##### **3.1.2 Chemical Testing Plan**

Laboratory analytes were selected based on contaminants commonly associated with current and historical uses of the Site and results from previous investigations. Samples were submitted to Pace Analytical (Pace) in Lenexa, Kansas, for VOC analysis via EPA Method 8260.

##### **3.1.3 Deviations from the QAPP**

No deviations from the QAPP occurred during the Phase II ESA, Quarter 2 sampling event. In February 2023, the QAPP was amended to specify use of passive diffusion bags (PDBs) for future sampling events.

## 3.2 FIELD ACTIVITIES

Field activities were performed at the Site from February 21 through 23, 2023, and groundwater samples were submitted to Pace on February 24, 2023. The following subsections summarize groundwater sample collection activities. Sampling locations are depicted on Figure 2 in [Appendix A](#).

### 3.2.1 Groundwater Sampling

Groundwater samples were collected via low-flow sampling technique by use of bladder pumps. Samples were collected from the most downgradient or least contaminated monitoring wells first, as identified by the results of initial sampling. Depth to groundwater was measured at each sample location. Groundwater at the Site was encountered between 6 and 25 feet bgs.

Bladder pumps with dedicated sample tubing were lowered to the middle of the screened interval and connected to a flow controller, compressed air source, and a flow through cell. Groundwater was purged at a discharge rate of approximately 1 liter per minute (L/min). Purging continued until parameters had stabilized over three successive readings at 3- to 5-minute intervals. Stable parameters were defined as follows: pH  $\pm 0.1$ -unit, temperature  $\pm 1$  degrees Celsius ( $^{\circ}\text{C}$ ), specific conductance  $\pm 3$  percent, turbidity less than 10 nephelometric turbidity units (NTUs) or  $\pm 10$  percent if greater than 10 NTU, dissolved oxygen  $\pm 10$  percent if greater than 3 milligrams per liter (mg/L) or  $\pm 0.3$  mg/L if less than 3 mg/L, and oxidation-reduction potential  $\pm 10$  millivolts.

After completion of sampling at each location, each piece of sampling equipment that had encountered the groundwater sample, except for the dedicated polyethylene tubing, was decontaminated with a non-ionic detergent and tap water wash, followed by a tap water rinse. Disposal of the tubing after use occurred as solid waste. PDB samplers and tethers designed to hang at the middle of the screened interval were acquired from Eon Products, Inc., of Snellville, Georgia. Following collection of each groundwater sample, a PDB sampler was left in each monitoring well and suspended for collection during the Phase II ESA, Quarter 3 sampling event, in May 2023.

Groundwater samples were analyzed for low-level VOCs via EPA Method 8260. Samples were collected into three 40-milliliter vials preserved with hydrochloric acid. [Table 2](#) summarizes groundwater samples collected during the Phase II ESA, Quarter 2 sampling event.

### **3.2.2 Quality Control Sampling**

Field quality control (QC) samples for this investigation included one laboratory-supplied aqueous trip blank, one field blank, and two groundwater field duplicates collected at MW-3B and MW-10B. Pace analyzed the QC samples for VOCs. Analytical data from the field blanks were used to evaluate contamination of sampling containers or sample preservatives, and assess contamination potentially introduced during sampling and laboratory procedures. Two groundwater field duplicates were collected to determine total method precision. Analytical results from field duplicate samples were used to calculate relative percent differences (RPDs) between paired results for each reported analyte. The RPDs served informational purposes only; however, the higher concentration of each analyte in the duplicate sample pair was compared to the associated screening level. Analytical accuracy was determined via analysis of

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 2**  
**SITE 9 – FORMER CLINTON ENGINES**  
**MAQUOKETA, IOWA**

---

laboratory-prepared spikes and duplicates. Calculated RPDs are discussed with the applicable data validation report in [Appendix D](#).

## **4.0 EVALUATION AND PRESENTATION OF RESULTS**

The following subsections present analytical data from groundwater samples collected during the Phase II ESA, Quarter 2 sampling event. Sample results from this ESA were compared to EPA MCLs (EPA 2023) and to IDNR SWSs for Non-Protected Groundwater (IDNR 2023). IDNR SWSs for Protected Groundwater are EPA MCLs. Copies of analytical data packages and data validation reports are in [Appendix D](#).

### **4.1 GROUNDWATER SAMPLES**

Groundwater samples were collected from 17 monitoring wells installed by the Toeroek Team in October and November 2022. Two duplicate pairs were collected. Samples were submitted to Pace for analyses for VOCs. The contaminants are listed in [Table 3](#) in the following order: miscellaneous VOCs, Site-related CVOCs, and fuel-related VOCs. CVOCs are followed by their common degradation products. The gasoline additive methyl tert-butyl ether (MTBE) was detected only in the duplicate collected at MW-10B and is listed right of the fuel-related VOCs.

The following groundwater samples contained concentrations of VOCs exceeding one or more regulatory benchmarks:

- Carbon tetrachloride was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-3B.
- PCE was detected at a concentration exceeding the EPA MCL of 5 µg/L in samples from MW-3B and the MW-3B duplicate (MW-X).
- TCE was detected at concentrations exceeding the EPA MCL of 5 µg/L and the IDNR SWS for non-protected groundwater of 76 µg/L in samples from MW-2B, MW-3B, MW-8, MW-9, MW-10A, MW-10B, and MW-12. Concentration of TCE in MW-6B exceeded only the EPA MCL of 5 µg/L.
- *cis*-1,2-DCE was detected at concentrations exceeding the EPA MCL of 70 µg/L and the IDNR SWS for non-protected groundwater of 350 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, MW-10B, and MW-12. Concentrations of *cis*-1,2-DCE in samples MW-9 and MW-14 exceeded only the EPA MCL of 70 µg/L.
- *trans*-1,2-DCE was detected at concentrations exceeding the EPA MCL of 100 µg/L and the IDNR SWS for non-protected groundwater of 700 µg/L in the sample from MW-8B. Concentration of *trans*-1,2-DCE in MW-12 exceeded only the EPA MCL of 100 µg/L.

**PHASE II ENVIRONMENTAL SITE ASSESSMENT, QUARTER 2**  
**SITE 9 – FORMER CLINTON ENGINES**  
**MAQUOKETA, IOWA**

---

- VC was detected at concentrations exceeding the EPA MCL of 2 µg/L and the IDNR SWS for non-protected groundwater of 10 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, MW-10B, and MW-12. Concentration of VC in sample MW-13 exceeded only the EPA MCL of 2 µg/L.
- Benzene was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-8B.

No other chemical of concern was detected at a concentration exceeding a regulatory benchmark in any other well. [Table 3](#) below lists all VOC detections in groundwater. Figure 3 in [Appendix A](#) shows VOC exceedances of IDNR SWSs or EPA MCLs or RSLs in groundwater.

#### **4.2     QUALITY CONTROL SAMPLES**

Pace analyzed QC samples for VOCs. No VOCs were detected in the trip blank or the field blank. Calculated RPDs between data from the duplicate pair from MW-3B indicated poor precision of 1,2-DCE (total), carbon tetrachloride, TCE, and *cis*-1,2-DCE, resulting in estimated values. Duplicate results for all other analytes were within acceptance limits, rendering those data reliable.

## **5.0 DISCUSSION OF SIGNIFICANT FINDINGS AND CONCLUSIONS**

This section summarizes significant findings and offers conclusions regarding the Phase II ESA, Quarter 2 sampling event.

CVOCs are known to have impacted groundwater at the Site and were detected in all on-site groundwater samples. CVOCs were detected in off-site groundwater samples from all except upgradient bedrock monitoring wells MW-101 and MW-102. TCE and its degradation products were detected at concentrations exceeding the IDNR SWS for non-protected groundwater in on-site monitoring wells MW-2B, MW-3B, MW-8B, MW-9, MW-10A, and MW-10B, and off-site monitoring well MW-12. On-site monitoring well MW-6B and off-site monitoring well MW-14 had CVOC concentrations exceeding the MCL, but not the IDNR SWS for non-protected groundwater (protected groundwater SWSs are MCLs, if established). The sample from MW-10B contained a low concentration of MTBE, an oxygenate in unleaded gasoline.

The following groundwater samples contained concentrations of VOCs that exceeded a regulatory benchmark:

- Carbon tetrachloride exceeded the EPA MCL in the sample from samples MW-3B.
- PCE was detected at a concentration exceeding the EPA MCL of 5 µg/L in samples from MW-3B and the MW-3B duplicate (MW-X).
- TCE exceeded the MCL and SWS in samples from MW-2B, MW-3B, MW-8, MW-9, MW-10A, MW-10B, and MW-12 and the MCL only in the sample from MW-6B.
- *cis*-1,2-DCE exceeded the MCL and IDNR SWS in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, MW-10B, and MW-12 and the MCL only in samples from MW-9 and MW-14.
- *trans*-1,2-DCE exceeded the MCL and IDNR SWS in the sample from MW-8B and the MCL only in the sample from MW-12.
- VC exceeded the MCL and the IDNR SWS in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, MW-10B, and MW-12 and the MCL only in the sample from MW-13.
- Benzene exceeded the MCL in the sample from MW-8B.

No other chemical of concern was detected at a concentration exceeding a regulatory benchmark.

Notes:

B = Boring

BH = Borehole

DCA = Dichloroethane

DCE = Dichloroethene

FD = Field duplicate

ft bgs = Feet below ground surface

µg/L = Micrograms per liter

MW = Monitoring well

NA = Not available

ND = Not detected

NS = Analyte not selected for analysis

PCE = Tetrachloroethene

TCA = Trichloroethane

TCE = Trichloroethene

R = Replacement

SB = Soil boring

VC = Vinyl chloride

20/23 Clinton Engins  
 Leave XC office for hotel  
 in Davenport.  
 Arrive at hotel in Davenport  
 Finished for day

20/23

- 02/21/23
- 0700 Leave hotel for Siphon Site.
- 0740 Arrive at Siphon Site. Noted that 55-gallon drums were expanded on the bottom due to water inside freezing.
- 0745 Will begin sampling the bedrock wells and others at fairground.
- 0755 Arrive at IVSII MW-103  
 Depth: 16.49ft
- 0800 Trouble shooting bladder pump assembly.
- 0930 Began purging well
- 1000 Collect sample [MW-103]
- 1030 Arrive at MW-14  
 Depth: 11.32 ft
- 1050 Begin purging well.
- 1130 Collect sample [MW-14]
- 1150 Arrive at MW-104  
 Depth: 17.82 ft
- 1200 Begin purging well
- 1240 Collect sample [MW-104]
- 1330 Arrive at MW-101  
 Depth: 24.84 ft
- 1355 Begin purging well
- 1430 Collect sample [MW-101]
- 1450 Arrive at MW-102  
 Depth: 64.20ft Trouble shooting bladder pump ~~Rate in ml/min~~

2/21/23

Begin purging well  
Collect sample [MW-102]  
Finish for the day. Leaving site  
for hotel.

CW  
2/21/23

2/22/23

- 0740 Arrive at MW-13  
Depth: 8.88ft  
0800 Begin pumping well  
0820 Collect sample [MW-13]  
0835 Arrive at MW-12  
Depth: 6.49ft  
0840 Begin Purging well  
0930 Collect sample [MW-12]  
0950 Arrive at MW-9  
Depth: 15.03ft  
1000 Begin purging well  
1030 Collect sample [MW-9]  
1050 Arrive at MW-11  
Depth: 16.70ft  
1100 Begin purging well  
1145 Collect sample [MW-11]  
1200 Arrive at MW-4B  
Depth: 16.79ft  
1205 Begin purging well  
1240 Collect sample [MW-4B]  
1330 Arrive at MW-6B  
Depth: 21.98ft  
1340 Begin Purging well  
1410 Collect sample [MW-6B]  
1420 Arrive at MW-2B  
Depth: 15.13

Rite in the Rain

2/23/23

Begin purging well MW-6B <sup>CW</sup> 2B  
 Collect sample MW-2B  
 Arrive at MW-8B  
 Depth: 13.67 ft  
 Begin Purging well  
 Collect sample MW-8B  
 Arrive at MW-3B  
 Depth: 21.08 ft  
 Begin purging well.  
 Collect sample MW-3B  
 Collect sample MW-X  
 Leaving site for hotel.

CW  
2/23/23

2/23/23

0740 Arrive at MW-1B  
 Depth: 18.84 ft  
 0750 Begin purging well  
 0820 Collect sample MW-1B  
 0830 Arrive at MW-10A & MW-10B  
 10A Depth: 12.27 ft 10B Depth: 13.96 ft  
 0840 Begin purging MW-10A  
 0910 Collect sample MW-10A  
 0925 Begin purging well MW-10B  
 0955 Collect sample MW-10B  
 Collect sample MW-Y  
 1010 Arrive at MW-2B to replace cap.  
 1015 Leaving site.  
 1630 ARRIVE back at KC surface  
 1645 Collected sample Frisip Blanke  
 1700 Finished for the day

02/23/23

Rite in the Rain.

RE: Project: CLINTON ENGINES  
Pace Project No.: 60422699

Dear Kaitlyn Mitchell:

Enclosed are the analytical results for sample(s) received by the laboratory on February 24, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church  
jamie.church@pacelabs.com

## QUALIFIERS

Project: CLINTON ENGINES

Pace Project No.: 60422699

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 833836

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 833838

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 833904

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 834070

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

Sufficient volume:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Correct containers used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Pace containers used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Containers intact:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Unpreserved 5035A / TX1005/1006 soils frozen in 48hrs?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Filtered volume received for dissolved tests?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Sample labels match COC: Date / time / ID / analyses	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Samples contain multiple phases? Matrix: <u>WT</u>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Containers requiring pH preservation in compliance? (HNO <sub>3</sub> , H <sub>2</sub> SO <sub>4</sub> , HCl<2; NaOH>9 Sulfide, NaOH>10 Cyanide) (Exceptions: VOA, Micro, O&G, KS TPH, OK-DRO)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Cyanide water sample checks:	List sample IDs, volumes, lot #'s of preservative and the date/time added.
Lead acetate strip turns dark? (Record only)	
Potassium iodide test strip turns blue/purple? (Preserve)	
Trip Blank present:	
Headspace in VOA vials (>6mm):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Samples from USDA Regulated Area: State:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Additional labels attached to 5035A / TX1005 vials in the field?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A

CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a **LEGAL DOCUMENT**. All relevant fields must be completed accurately. Submitting a sample via this chain of custody constitutes acknowledgment and acceptance of the Pace Terms and Conditions found at <https://info.paceleads.com/hubs/pas-standard-terms.pdf>.

Section A

## Recognized Project Information:

### **Required Project Information:**

Company: TETRA TECH EMI  
Address: 415 Oak  
City: Kansas City, MO 64106  
Email: kaitlyn.mitchell@tetratech.com  
Phone: (816)412-1742  
Requested Due Date:

Company:	TETRA TECH EMI	Attention:	
Address:	415 Oak	Report To:	Kaitlyn Mitchell
Kansas City, MO 64106	Copy To:		
Email:	kaitlyn.mitchell@tetratech.com.	Purchase Order #:	
Phone:	(816)412-1742	Project Name:	Clinton Engines
Fax:		Project #:	
Requested Due Date:		Pace Project Manager:	jamie.church@paceands.com
		Pace Profile #:	15191 line 5
		Regulatory Agency:	
		State / Location:	A

Section C

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.  
Ent and acceptance of the Pace Terms and Conditions found at <https://info.necelabs.com/hubfs/nec-standard-forms.pdf>

## DATA VERIFICATION REPORT

**Prepared by:** Ellen McEntee  
**Date:** March 12, 2023  
**Site Name/Job Number:** Clinton Engines / 103G65210190.009.03  
**Laboratory:** Pace Analytical, Lenexa, KS

**Data Package or SDG Number:** 60422699

**Sample Designations/Names:**

MW-1B	MW-2B	MW-3B	MW-4B	MW-6B	MW-8B
MW-09	MW10A	MW10B	MW-11	MW-12	MW-13
MW-14	MW-101	MW-102	MW-103	MW-104	MW-X
MW-Y	FIELD BLANK	TRIP BLANK			

**Matrices:** Water

**Analytical Parameters:** VOCs by SW-846 Method 8260

<b>Data Package Element</b>	<b>Usable</b>	<b>Rejected</b>	<b>NA</b>	<b>Description of Affected Data (note specific samples and analytical parameters affected)</b>
Chain of custody	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	The chain of custody was completed appropriately with the following exception. The "Relinquished By" section of the second page of the chain of custody was not signed and dated. Results were not qualified.
Data package completeness	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	The data package contains all the required elements.
Sample preservation, storage, and holding times	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	The samples were received on 02/24/2023; the samples arrived in good condition. Custody seals were not present. All samples were analyzed within the recommended holding time.
Method and field blank contamination	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	The method blanks, field blank and trip blank were non-detect for all target analytes.
Surrogate spikes	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Surrogate spikes were within control limits.
Matrix spikes/matrix spike duplicates (MS/MSD)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	MS/MSDs from other data packages were not assessed.
Laboratory control samples/Laboratory control sample duplicates (LCS/LCSD)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<b>LCS 3308590, 3308595, and 3308763:</b> The LCS recoveries for acetone were above the laboratory acceptance limit. The associated sample results are non-detect for acetone and were not qualified.

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Other (Field Duplicates)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<p><b>MW-3B/MW-X:</b> The relative percent differences for 1,2-dichloroethene (total), carbon tetrachloride, trichloroethylene, and cis-1,2-dichloroethylene were above the acceptance limit. The results in the parent sample and field duplicate were qualified as estimated (flagged J).</p> <p><b>MW-10B/MW-Y:</b> The relative percent differences for all analytes were within the acceptance limit.</p>
<b>Summary</b>				
Data are usable as qualified based on the findings for this validation effort.
