Lenexa, Kansas 66219

Subject: Contract No. 68HERH19D0018; Task Order No. 68HE0719F0190
Former Clinton Engines
605 and 607 East Maple Street, Maquoketa, Jackson County, Iowa
Phase II Environmental Site Assessment, Quarter 3

Dear Ms. Dunning:

Toeroek Associates, Inc. (Toeroek) and our teaming subcontractor, Tetra Tech, Inc. (Tetra Tech), (hereafter "Toeroek Team") are pleased to present the Phase II Environmental Site Assessment (ESA), Quarter 3 report regarding the Former Clinton Engines site at 605 and 607 East Maple Street in Maquoketa, Jackson County, Iowa.

This deliverable has been reviewed internally as part of Tetra Tech's quality assurance program, as well as Toeroek's quality assurance program, and is consistent with Toeroek's Quality Management Plan for the Resource Conservation and Recovery Act (RCRA) Enforcement and Permitting Assistance (REPA) contract. Documentation of this review is retained in the Toeroek Team's project files.

If you have any questions or comments, please contact Greg Hanna at 720-898-4102 or Kaitlyn Mitchell at 816-412-1742.

Sincerely,

Greg Hanna
Toeroek Team Program Manager

1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) tasked Toeroek Associates, Inc. (Toeroek) and its teaming subcontractor, Tetra Tech, Inc. (Tetra Tech) (together, the "Toeroek Team") with providing technical support to the EPA Region 7 Brownfields Program under Contract Number (No.) 68HERH19D0018, Task Order No. 68HE0719F0190. EPA Region 7 requested that the Toeroek Team conduct a Phase II Environmental Site Assessment (ESA) as part of a Targeted Brownfields Assessment of the Former Clinton Engines site (the Site). This Phase II ESA focuses on 605 and 607 East Maple Street in Maquoketa, Jackson County, Iowa, and the wells associated with the Site on surrounding properties (Appendix A, Figures 1 and 2).

The Toeroek Team did not conduct a Phase I ESA of the Site. The Toeroek Team developed the Phase II ESA based on results of the following previous investigations: (1) Missman, Stanley, & Associates P.C. (MSA) 1999 Phase I and II ESA (MSA 1999); (2) 2007 enrollment application submitted by the City of Maquoketa (City) for the Iowa Department of Natural Resources (IDNR) Land Recycling Program (LRP), including the Forest Road Consultants' 2006 Work Plan and TestAmerica analytical data (City 2007); (3) Impact7G, Inc. (Impact7G) 2013 Site Assessment, 2014 Site Assessment, and 2019 Supplemental Phase II ESA reports under direction from the IDNR LRP (Impact7G 2013, 2014, 2019); and (4) Superfund Technical Assessment and Response Team (START) 2021 Integrated Site Assessment (Tetra Tech 2021).

The scope of the Phase II ESA included collection of subsurface soil, groundwater, and soil-gas samples to determine plume dynamics and assess horizontal and vertical plume stability. Initial sampling and installation of monitoring wells was in October and November 2022. The Toeroek Team now is sampling these monitoring wells quarterly. This report details the third (Quarter 3) sampling event at the Site conducted in May 2023.

This Phase II ESA, Quarter 3, report is consistent with ASTM International Standard E1903-19 for Phase II ESAs, and otherwise complies with EPA's "All Appropriate Inquiries" Rule (40 *Code of Federal Regulations* Part 312).

1.1 PURPOSE

Purposes of the Phase II ESA were to: (1) confirm or eliminate Recognized Environmental Conditions (RECs) identified during previous investigations; (2) acquire information regarding natures and concentrations of contaminants present at the Site in soil and/or groundwater; (3) assess potential impacts

on the Site and risks posed by hazardous substances that would support informed business decisions about the Site; and (4) where applicable, satisfy the innocent purchaser defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

1.2 SPECIAL TERMS AND CONDITIONS

No special terms or conditions were identified during the Phase II ESA.

2.0 BACKGROUND AND SITE HISTORY

This section specifies the location of the Site and its features, describes the physical setting, recounts the history of the Site, discusses land uses at the Site and adjacent properties, and relates results of previous investigations.

2.1 SITE DESCRIPTION AND FEATURES

The Site is in Maquoketa, Jackson County, Iowa. It is a former industrial site in a mixed-use area consisting of residential, agricultural, and commercial land. The Site encompasses three Jackson County parcels and approximately 10.86 acres of land (Beacon 2022). Coordinates at the approximate center of the Site are 42.065375 degrees north latitude and 90.657173 degrees west longitude. The Site is in Section 19, Township 84 North, Range 3 East, as depicted on the Maquoketa, Iowa, 7.5-minute topographic map (U.S. Geological Survey [USGS] 1980).

Beginning in approximately 1945, the Site hosted industrial operations that included production of small engines. The Clinton Engines Company (Clinton Engines) acquired the property in 1950 from the Maquoketa Company and continued production of small engines. During the 1999 Phase I and Phase II ESA, the machine shop, shipping and receiving, and one of the paint booths were in active use. The Phase I ESA report described other portions of the Site facility as dilapidated, with holes in the roof and walls and standing water. Former operations included a foundry and die casting. Apparent underground storage tanks (USTs), chemical storage rooms, and 55-gallon drums were noted in various areas (MSA 1999). Clinton Engines officially closed in 1999, and the property was donated to the City in 2000 (IDNR 2020). In 2004, the Jackson County Historical Society purchased the western parcel from the City (Beacon 2022). Review of aerial photographs indicated that most facility buildings had been razed by 2004, with only a former office/administration building left standing (Historic Aerials 2023). This building has been converted into the Clinton Engines Museum. Several buildings associated with the museum have been constructed at the Site after razing of the original manufacturing buildings.

2.2 PHYSICAL SETTING

The Site lies within Maquoketa city limits and is bounded north by East Maple Street, with commercial or industrial properties beyond; east by a metal barn/residence (at a former railroad grade) and a farm center; south by residential properties and farmland; and west by South Clark Street, with residential properties beyond. Elevation of the Site is approximately 700 feet above mean sea level (amsl), with a slight slope to

the north and northeast. Higher elevations are off site to the south and southwest, with elevations reaching approximately 750 feet amsl.

2.2.1 Geologic Setting

The Site is in the Central Lowlands physiographic province of the United States. Jackson County is in eastern Iowa near the boundary of the Southern Iowa Drift Plain and the Iowan Surface. Locally, a moderate loess cover overlies a thin glacial drift layer (City of Maquoketa & Alliance Water, Iowa Rural Water Association 2014). The Southern Iowa Drift Plain is characterized by a steeply rolling landscape, with the eastern part dominated by tabular uplands. Surfaces of the Southern Iowa Drift Plain are cut deeply into the Pre-Illinoisan glacial drift and are overlain by various thicknesses of Wisconsinan loess. The Iowan Surface is more eroded with gently sloping hills and valleys (Iowa Geological Survey [IGS] 2022a).

Soils at the former manufacturing area at the Site are characterized as urban land, which is generally flat and has been altered by buildings, parking lots, and cut and fill to render the soil unidentifiable. The lawn area surrounding the museum to the northwest is classified as well-drained Worthen silt loam, with 2 to 5 percent slopes, that derived from silty alluvium. The railroad grade area to the east is classified as Orthents, loamy, with 1 to 5 percent slopes. Soils south and southwest of the Site (at higher elevations) are classified as Tama silt loams, driftless, with slopes of 5 to 14 percent, that derived from loess (U.S. Department of Agriculture [USDA] 2022).

In April 2014, Impact7G advanced two bore holes (BHs), BH-1 and BH-2, at the Site to obtain information about geology of the Site. BH-1 was in the south-central portion of the Site, and BH-2 was in the north-central part of the Site. BH-1 was advanced to 38 feet below ground surface (bgs), where the boring encountered carbonate (likely dolomite) bedrock. Materials logged in BH-1 were primarily silt with some clay layers. Interspersed in the silt and clay were fine and medium sands from 12 to 22, 29 to 30, and 35 to 37 feet bgs. BH-2 was advanced to 90 feet bgs and exposed primarily silt with clay from 75 to 90 feet bgs, at which depth carbonate (dolomite) bedrock was encountered. Fine to medium sands were logged from 18 to 25 and 58 to 64 feet bgs. The water table was encountered at depths ranging from 13 to 16 feet bgs (Impact7G 2014).

The IGS 1992 Guidebook 56 *Quaternary Drainage Evolution of the Maquoketa River Valley* identifies an ancient Maquoketa River channel underlying the City. Delineation of the channel was based on bedrock depths in the area that ranged to approximately 155 feet bgs. The ancient channel having depths

exceeding 100 feet bgs trends north-south to the central areas of the City, then trends northeast (Ludvigson, Bettis, and Hudak 1992). Alluvial deposits within the channel would be in lateral contact with shallower bedrock along the sides.

The bedrock geology map of northeast Iowa indicates that uppermost bedrock in the Maquoketa area consists of Silurian-aged Hopkinton and Blandings Formations, which are a 330-foot layer of fossil-moldic to vuggy dolomite with varying amounts of chert (IDNR 1998). During the Phase II ESA investigation, weathered, vuggy, fossiliferous dolomitic bedrock was encountered at depths ranging from 21 feet bgs at the Jackson County Fairgrounds, approximately 0.6 mile northeast of the Site, to 117 feet bgs, approximately 1,000 feet west of the Site.[1]

2.2.2 Hydrogeology

Silurian carbonate rocks make up the uppermost bedrock in the vicinity of the Site. The stratigraphic log for City Well 6, approximately 0.3 mile southwest of the Site, begins at 125 feet bgs in Silurian (undifferentiated) deposits and reaches a total depth of 2,325 feet (IGS 2022b). The Ordovician Maquoketa Formation (mainly shale) was encountered from 245 to 270 feet bgs and is considered an aquitard protecting the underlying aquifers. Cambrian rocks below the St. Lawrence Formation (encountered approximately 1,200 feet bgs) are indicated as the aquifer supplying City Wells 4, 5, and 6 (IGS 2022b).

Porous Silurian dolomites form the uppermost bedrock aquifer. In eastern and northern Iowa, the average thickness is approximately 200 to 400 feet. Based on depth of the underlying Ordovician Maquoketa Formation listed for City Well 6, wells tapping this aquifer would be less than approximately 245 feet deep.

The Cambrian-Ordovician aquifer has been extensively developed for municipal and industrial supplies, and yields range from 100 to 2,300 gallons per minute (gpm). Yields of 1,000 gpm can be obtained in all but the easternmost part of the aquifer area if drawdown of water levels is not a major concern (USGS 1978).

The upper part of the Cambrian-Ordovician Aquifer consists of the Ordovician St. Peter Sandstone and Prairie du Chien Formation and the Cambrian Jordan Sandstone. Wells completed in the Jordan

[1] Bedrock was encountered at 122 feet bgs approximately 750 feet south of the Site; however, this location is approximately 45 feet higher in elevation.

Sandstone typically produce at least 50 gpm, with yields up to 300 gpm; however, high yields generally depend on thickness and degree of cementation of the Jordan Sandstone (USGS 1978).

The lower part of the Cambrian-Ordovician Aquifer consists of three Cambrian formations (Wonewoc, Eau Claire, and Mt. Simon), collectively referred to as the "Dresbach" aquifer. Yields in the Dresbach aquifer range from 280 to 2,560 gpm, and the unit commonly yields at least 500 gpm. Yields are highest near Clinton, Iowa, decreasing westward, where water quality becomes poor. The Maquoketa area is an exception to this, as City Wells 4, 5, and 6 have high production capacities from this aquifer. Geologic data indicate this may be a result of faulting within the Plum River fault zone, bringing the higher quality water in the Jordan Sandstone into juxtaposition with the Galesville Sandstone Member of the Wonewoc Formation (City of Maquoketa & Alliance Water, Iowa Rural Water Association 2014).

2.2.3 Hydrology

Most of the Site is gently sloping (north and northeast) or flat with elevations of approximately 700 feet amsl. Higher elevations (approximately 750 feet amsl) are off site to the south and west, and lower elevations (approximately 680 feet amsl) are farther north and east, near the Maquoketa River (approximately 0.8 to 2 miles north of the Site) or Prairie Creek (approximately 0.8 mile east of the Site). Surface water likely flows into the stormwater sewer system or generally northeast toward Prairie Creek.

2.3 SUMMARY OF PREVIOUS ASSESSMENTS

In 1999, MSA conducted a Phase II ESA of the Site. Tables B-1, B-2, and B-3 in Appendix B summarize soil, groundwater, and soil-gas data for volatile organic compounds (VOCs) from that assessment. The 1999 Phase II ESA found concentrations of chlorinated VOCs (CVOCs), as well as benzene, toluene, ethylbenzene, and xylenes (BTEX) in groundwater and soil that exceeded risk-based screening levels and, for groundwater, EPA Maximum Contaminant Levels (MCLs).

On May 23, 2005, IDNR notified the City regarding the transfer of the Site to the Contaminated Sites Section within IDNR (IDNR 2005a). Results from an Initial Site Screening, completed on June 2, 2005, indicated the need for additional investigations at the Site (IDNR 2005b). The Site was enrolled in the IDNR Voluntary LRP in April 2008. According to the Voluntary LRP enrollment application, additional Site investigation activities occurred in 2006 (City 2007). Analytical results from the 2006 sampling event are in Table B-1 and Table B-2 in Appendix B.

The 2006 groundwater sampling event at the Site found elevated concentrations of BTEX and CVOCs. Further, the enrollment application included information pertaining to removal of three additional USTs (two 20,000-gallon diesel tanks and one 8,000-gallon tank of unidentified contents) from 2001 to 2002 (City 2007).

Since 2006, further Site assessment activities have been sporadic, focusing primarily on delineation of extents of on-site and off-site groundwater contamination and on-site vapor intrusion (VI). CVOCs at the following maximum concentrations have been detected in groundwater samples from on-site groundwater monitoring wells and off-site temporary wells as far as 900 feet north-northwest of the Site:

- Trichloroethene (TCE) at 9,580 micrograms per liter (µg/L), off-site temporary well;
- *cis*-1,2-Dichloroethene (DCE) at 7,190 µg/L, off-site temporary well;
- *trans*-1,2-DCE at 1,044 µg/L, off-site temporary well;
- 1,1,2-Trichloroethane (TCA) at 132 µg/L, off-site temporary well;
- Vinyl chloride (VC) at 319 µg/L, off-site temporary well; and
- Toluene at 247,000 µg/L, on-site groundwater monitoring well (Impact7G 2019).

Additional Site investigation activities in 2013 included sampling of groundwater monitoring wells that had been installed during previous investigations (Impact7G 2013). Available groundwater and soil data are in Table B-1 and Table B-2 in Appendix B.

Given the elevated CVOCs concentrations in groundwater, IDNR required indoor VI sampling at the museum (IDNR 2014). Sub-slab samples collected at the museum in 2014 and 2015 yielded TCE at concentrations above risk-based screening levels. In response, cracks in the museum basement were repaired, chemicals stored in the basement were relocated, and the sump pit area was passively vented. In December 2019, follow-up indoor air sampling at the museum documented indoor air exceedances above risk-based screening levels. As a result, energy recovery ventilators were installed at the museum in September 2020 (IDNR 2020). Available VI sampling results for selected VOCs are in Table B-3 in Appendix B.

IDNR requested federal assistance in a letter dated February 17, 2020, regarding potential impacts of off-site groundwater contamination on nearby residential and commercial properties (IDNR 2020). IDNR also requested assistance related to VI sampling at surrounding properties near areas of known groundwater contamination to further determine potential impacts (Tetra Tech 2021).

In 2020 and 2021, Tetra Tech, under its START contract, collected indoor air, soil-gas, soil, and drinking water samples at the Site and at nearby residential and commercial properties. No CVOCs were detected in soil gas. No VOC was detected in soil, sub-slab vapor, or indoor air at concentration exceeding an associated removal management level. No VOC was detected in drinking water at concentration exceeding an associated EPA MCL (Tetra Tech 2021).

The 2022 Phase II ESA by the Toeroek Team included soil, groundwater, and soil-gas sampling (Toeroek Team 2023a). Toluene was detected in 17 of the 21 subsurface soil samples, mostly at low concentrations (estimated at less than 1.0 microgram per kilogram [µg/kg]), where no other fuel-related VOCs were present, suggesting possible laboratory contamination. High toluene concentrations (greater than 100 µg/kg) detected in samples MW-1B (19 to 21 ft bgs) and MW-8B (14 to 16 ft bgs) were found with other fuel-related VOCs. TCE concentrations in five on-site soil samples exceeded EPA's Regional Screening Levels (RSL) for both residential and industrial soils. No other analyte concentration in any soil sample exceeded an associated RSL. No analyte concentration in any sample exceeded an associated IDNR Statewide Standard (SWS) for soils (Toeroek Team 2023a).

In October and November 2022, during the Phase II ESA, the Toeroek Team installed 17 monitoring wells, including four bedrock wells, seven delineation wells, and six vertical gradient wells. The bedrock wells were designed to assess deeper groundwater at a greater distance from the Site. The delineation wells were to delineate horizontal plume boundaries, and the vertical gradient wells were designed to characterize vertical contamination profiles paired with data from pre-existing shallower monitoring wells (Toeroek Team 2023a). Groundwater was not encountered at the proposed location of monitoring well MW-5; therefore, well installation was not completed at this location. Approximate locations of monitoring wells are depicted on Figure 2 in Appendix A.

Groundwater samples were collected from the 17 monitoring wells installed by the Toeroek Team in November 2022. These samples were collected using low-flow sampling techniques. After collection of each sample, a passive diffusion bag (PDB) was hung within the well in the middle of the screened interval of each well for future sampling. Table 1 below summarizes information regarding the monitoring wells installed during the November 2022 sampling event. Sampling data from the 2022 Phase II ESA are in Table B-4 through Table B-6 in Appendix B.

TABLE 1

MONITORING WELL SUMMARY
FORMER CLINTON ENGINES SITE, MAQUOKETA, IOWA

Sample Identification	Screened Interval (ft bgs)	Measured Depth (ft btoc)	Initial Depth to Water* (ft btoc)	Top of Casing Elevation (ft amsl)	Initial Groundwater Elevation* (ft amsl)
Vertical Gradient Wells					
MW-1B	42-52	52.22	18.47	697.310	678.84
MW-2B	47-57	56.74	16.11	693.835	677.73

MW-14	50-60	60.34	11.69	679.283	667.59
Bedrock Wells					
MW-101	117-127	128.15	24.38	702.415	678.04
MW-102	125-135	136.79	63.54	744.429	680.89
MW-103	27-37	36.96	16.04	679.851	663.81
MW-104	77-87	85.78	17.39	684.785	667.40

Notes:

* Measured in November 2022 immediately following installation and development.

** Monitoring wells MW-4B, MW-6B, and MW-11 have aboveground completions; remaining wells are flush-mount.

No well was installed in the boring advanced for MW-5B because a deeper groundwater zone was not encountered.

amsl	Above mean sea level	FD	Field duplicate
bgs	Below ground surface	ft	Feet
btoc	Below top of casing	MW	Monitoring well

TCE and its common degradation products were detected in all on-site monitoring wells except MW-11, near the southeast corner of the Site. TCE concentrations exceeded the MCL in 11 of the on-site groundwater samples. In 7 of 11 groundwater samples, TCE concentrations also exceeded the IDNR SWS for a non-protected groundwater source. Typically, where TCE levels exceeded these benchmarks, concentrations of *cis*-1,2-DCE and VC also exceeded the benchmarks. The highest CVOC concentrations were detected in groundwater samples from on-site monitoring wells MW-8B, MW-10A, and MW-10B, and from the off-site monitoring well MW-12. Slightly lower concentrations were detected in MW-10B (screened from 63 to 73 feet bgs) than in MW-10A (screened from 47 to 57 feet bgs), suggesting the separating zone has not significantly retarded downward migration. In addition, low levels of the following

were detected in several on-site groundwater samples: 1,1,1-TCA; 1,1,2-TCA; 1,1-dichloroethane (DCA); and tetrachloroethene (PCE).

No VOCs were detected in samples from upgradient bedrock monitoring wells MW-101 and MW-102, west and south of the Site, respectively. Groundwater from MW-103 and MW-104, northeast and downgradient of the Site, contained TCE and 1,2-DCE, but at concentrations below MCLs. At MW-104, bedrock was encountered at 71 feet bgs, and screening occurred from 77 to 87 feet bgs. In contrast, encounter with bedrock at MW-103, approximately 1,500 feet to the east, occurred at 21 feet bgs, and screening was from 27 to 37 feet bgs. The porous shallow bedrock is likely in lateral contact with contaminated groundwater in the sandy alluvial deposits.

Fuel-related VOCs (or constituents of petroleum solvents) were detected in nine groundwater samples, with benzene concentration exceeding the MCL in three samples (MW-1B, MW-8B, and MW-10A). No other concentration of a fuel-related VOC exceeded an associated MCL, and none exceeded an IDNR SWS for non-protected groundwater.

VOCs were detected in all soil-gas samples collected by the Toeroek Team from borings co-located to each respective monitoring well during the November 2022 sampling event. Detected TCE concentrations in soil-gas samples collected at MW-2B, MW-3B, MW-8B, MW-9, MW-10A/B, and MW-11 exceeded the EPA residential Vapor Intrusion Screening Level (VISL). Except for MW9-SG and MW10-SG, TCE concentrations also exceeded the commercial VISL. Soil-gas samples near monitoring wells in roadways were collected within the nearby easement. Numerous fuel-related VOCs were detected in the soil-gas samples; however, no concentration exceeded a VISL benchmark (Toeroek Team 2023a).

During the Quarter 2 sampling event in February 2023, groundwater samples were collected from the 17 on-site monitoring wells (Toeroek Team 2023b). TCE was detected in 14 of 17 samples, with concentrations exceeding the EPA MCL in eight samples. PCE was detected in three samples, with one of those samples at concentration exceeding the MCL. *Cis*- or *trans*-1,2,-DCE were detected in all samples except four—with *cis*-1,2-DCE concentrations exceeding the MCL in nine samples and *trans*-1,2-DCE concentrations exceeding the MCL in one sample. VC was detected in 10 samples—with 8 samples at concentrations exceeding the MCL. The results of the February 2023 sampling are included in Table B-7 in Appendix B.

3.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT ACTIVITIES

The following subsections describe the scope, field exploration, and methods implemented during the Phase II ESA, Quarter 3 sampling event. On May 31, 2023, Toeroek Team members Macy LaMasney and Clay Weiss sampled 17 monitoring wells previously installed by the Toeroek Team in October and November 2022. Field activities were documented in a logbook (Appendix C).

3.1 SCOPE OF THE ASSESSMENT

The Toeroek Team performed environmental sampling to determine if subsurface soils, groundwater, and soil gas are contaminated by historical activities at the Site. Sampling was consistent with the EPA-approved Quality Assurance Project Plan (QAPP) (Toeroek Team 2022).

3.1.1 Sampling Plan

The proposed sampling scheme for this project incorporated a combination of biased/judgmental sampling with definitive laboratory analysis, in accordance with procedures included in the *Guidance for Performing Site Inspections Under CERCLA* (Office of Solid Waste and Emergency Response [OSWER] Directive #9345.1-05, September 1992). The objective of groundwater sampling was to characterize possible releases to the environment. Figure 2 in Appendix A depicts sampling locations at the Site. One groundwater sample was collected at each of the 17 permanent groundwater monitoring well locations: MW-1B, MW-2B, MW-3B, MW-4B, MW-6B, MW-8B, MW-9, MW-10A, MW-10B, MW-11, MW-12, MW-13, MW-14, MW-101, MW-102, MW-103, and MW-104. Two samples were collected as field duplicate pairs—one from MW-10B (identified as MW-X on the chain-of-custody) and the other from MW-13 (identified as MW-Y on the chain-of-custody).

3.1.2 Chemical Testing Plan

Laboratory analytes were selected based on contaminants commonly associated with current and historical uses of the Site and results from previous investigations. Samples were submitted to Pace Analytical (Pace) in Lenexa, Kansas, for VOC analysis via EPA Method 8260.

3.1.3 Deviations from the QAPP

No deviations from the QAPP occurred during the Phase II ESA, Quarter 3 sampling event. In February 2023, the QAPP was amended to specify use of PDBs for future sampling events.

3.2 FIELD ACTIVITIES

Field activities occurred at the Site on May 31, 2023. Groundwater samples were submitted to Pace on June 1, 2023. The following subsections summarize groundwater sample collection activities. Sampling locations are depicted on Figure 2 in Appendix A.

3.2.1 Groundwater Sampling

Groundwater samples were collected from PDBs previously hung in each well after the Quarter 2 sampling event. Depth to groundwater was measured at each sample location. Groundwater at the Site was encountered between 7 and 63 feet bgs. After completion of sampling at each location, a new PDB was attached to each well's dedicated tether and lowered back into the well for the Quarter 4 sampling event, anticipated for August 2023.

Groundwater samples were analyzed for low-level VOCs via EPA Method 8260. Samples were collected into three 40-milliliter vials preserved with hydrochloric acid. Table 2 below summarizes groundwater samples collected during the Phase II ESA, Quarter 3 sampling event.

TABLE 2

GROUNDWATER LEVEL AND SAMPLE SUMMARY, QUARTER 3 (MAY 2023)
FORMER CLINTON ENGINES SITE, MAQUOKETA, IOWA

Location ID(s)	Sample Date and Time*	Depth to Groundwater (ft btoc)	Static Water Level (ft amsl)
Vertical Gradient Wells

3.2.2 Quality Control Sampling

Field quality control (QC) samples for this investigation included one laboratory-supplied aqueous trip blank, one field blank, and two groundwater field duplicates collected at MW-13 and MW-10B. Pace analyzed the QC samples for VOCs. Analytical data from the field blanks were used to evaluate contamination of sampling containers or sample preservatives, and assess contamination potentially introduced during sampling and laboratory procedures. Two groundwater field duplicates were collected to determine total method precision. Analytical results from field duplicate samples were used to calculate relative percent differences (RPDs) between paired results for each reported analyte. The RPDs served informational purposes only. Analytical accuracy was determined via analysis of laboratory-prepared

spikes and duplicates. Calculated RPDs are discussed with the applicable data validation report in Appendix D.

4.0 EVALUATION AND PRESENTATION OF RESULTS

The following subsections present analytical data from groundwater samples collected during the Phase II ESA, Quarter 3 sampling event. Sample results from this ESA were compared to EPA MCLs (EPA 2023) and to IDNR SWSs for Non-Protected Groundwater (IDNR 2023). IDNR SWSs for Protected Groundwater are EPA MCLs. Copies of analytical data packages and data validation reports are in Appendix D.

4.1 GROUNDWATER SAMPLES

Groundwater samples were collected from 17 monitoring wells installed by the Toeroek Team in October and November 2022. Two duplicate pairs were collected. Samples were submitted to Pace for analyses for VOCs. The contaminants are listed in Table 3 in the following order: miscellaneous VOCs, Site-related CVOCs, and fuel-related VOCs. CVOCs are followed by their common degradation products.

The following groundwater samples yielded concentrations of VOCs exceeding one or more regulatory benchmarks:

- Carbon tetrachloride was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-3B.
- Chloromethane was detected at concentrations exceeding the EPA RSL for tap water of 19 µg/L in the samples from MW-2B and MW-8B.
- PCE was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-3B.
- TCE was detected at concentrations exceeding the EPA MCL of 5 µg/L and the IDNR SWS for non-protected groundwater of 76 µg/L in samples from MW-2B, MW-3B, MW-8, MW-9, MW-10A, and MW-10B. Concentrations of TCE in samples from MW-12 and MW-14 exceeded only the EPA MCL of 5 µg/L.
- *cis*-1,2-DCE was detected at concentrations exceeding the EPA MCL of 70 µg/L and the IDNR SWS for non-protected groundwater of 350 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, and MW-10B. Concentration of *cis*-1,2-DCE in sample MW-14 exceeded only the EPA MCL of 70 µg/L.
- *trans*-1,2-DCE was detected at a concentration exceeding the EPA MCL of 100 µg/L in the sample from MW-8B.

- VC was detected at concentrations exceeding the EPA MCL of 2 µg/L and the IDNR SWS for non-protected groundwater of 10 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, and MW-10B. Concentration of VC in sample MW-13 exceeded only the EPA MCL of 2 µg/L.

- Benzene was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-10B.

No other chemical of concern was detected at concentration exceeding a regulatory benchmark in any other well. Several chemicals detected, such as acetone, 2-butanone, methylene chloride, and toluene, are common laboratory contaminants; these are not discussed further. Table 3 below lists all pertinent VOC detections in groundwater. Figure 3 in Appendix A shows VOC exceedances of IDNR SWSs or EPA MCLs or RSLs in groundwater.

Notes:

All values are in micrograms per liter (µg/L).

* MCL for total trihalomethanes.
** RSL for tap water is listed
*** Toluene (7.7 µg/L) and cumene (0.54 J) were also detected.
† 1,2-Dichloroethane (0.79 J) was also detected.

Bold font indicates a value exceeds the MCL or RSL.
Shading indicates a value exceeds the IDNR SWS for non-protected groundwater.
The common laboratory contaminants acetone, 2-butanone, and methylene chloride were detected but are not listed.

EPA	U.S. Environmental Protection Agency
DCE	Dichloroethene
ft bgs	Feet below ground surface
IDNR	Iowa Department of Natural Resources
J	Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
MCL	Maximum Contaminant Level
MW	Monitoring well
NE	Not established
PCE	Tetrachloroethene
RSL	Regional Screening Level
SWS	Statewide Standard
TCE	Trichloroethene
THQ	Target hazard quotient
TR	Carcinogenic risk
VOC	Volatile organic compound

4.2 QUALITY CONTROL SAMPLES

Pace analyzed QC samples for VOCs. No VOCs were detected in the trip blank or the field blank. Duplicate results were within acceptance limits, rendering those data reliable.

5.0 DISCUSSION OF SIGNIFICANT FINDINGS AND CONCLUSIONS

This section summarizes significant findings and offers conclusions regarding the Phase II ESA, Quarter 3 sampling event.

CVOCs known to have impacted groundwater at the Site were detected in all on-site groundwater samples. CVOCs were detected in off-site groundwater samples from all wells except upgradient bedrock monitoring wells MW-101 and MW-102. TCE and its degradation products were detected at concentrations exceeding the IDNR SWS for non-protected groundwater in on-site monitoring wells MW-1B, MW-2B, MW-3B, MW-8B, MW-9, MW-10A, and MW-10B. Off-site monitoring wells MW-12, MW-13, and MW-14 yielded CVOC concentrations exceeding MCLs but not IDNR SWSs for non-protected groundwater (protected groundwater SWSs are MCLs, if established). The sample from MW-10B detected benzene, a fuel-related VOC, at a concentration exceeding the MCL.

The following groundwater samples contained concentrations of VOCs exceeding a regulatory benchmark:

- Chloromethane was detected at concentrations exceeding the EPA RSL for tap water of 19 µg/L in the samples from MW-2B and MW-8B.
- PCE was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-3B.
- TCE was detected at concentrations exceeding the EPA MCL of 5 µg/L and the IDNR SWS for non-protected groundwater of 76 µg/L in samples from MW-2B, MW-3B, MW-8, MW-9, MW-10A, and MW-10B. Concentrations of TCE in samples from MW-12 and MW-14 exceeded only the EPA MCL of 5 µg/L.
- *cis*-1,2-DCE was detected at concentrations exceeding the EPA MCL of 70 µg/L and the IDNR SWS for non-protected groundwater of 350 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, and MW-10B. Concentration of *cis*-1,2-DCE in sample MW-14 exceeded only the EPA MCL of 70 µg/L.
- *trans*-1,2-DCE was detected at a concentration exceeding the EPA MCL of 100 µg/L in the sample from MW-8B.
- VC was detected at concentrations exceeding the EPA MCL of 2 µg/L and the IDNR SWS for non-protected groundwater of 10 µg/L in samples from MW-1B, MW-2B, MW-3B, MW-8B, MW-10A, and MW-10B. Concentration of VC in sample MW-13 exceeded only the EPA MCL of 2 µg/L.
- Benzene was detected at a concentration exceeding the EPA MCL of 5 µg/L in the sample from MW-10B.

No other chemical of concern was detected at a concentration exceeding a regulatory benchmark.

Notes:

B = Boring
BH = Borehole
DCA = Dichloroethane
DCE = Dichloroethene
FD = Field duplicate
ft bgs = Feet below ground surface
µg/L = Micrograms per liter
MW = Monitoring well
NA = Not available
ND = Not detected
NS = Analyte not selected for analysis
PCE = Tetrachloroethene
TCA = Trichloroethane
TCE = Trichloroethene
R = Replacement
SB = Soil boring
VC = Vinyl chloride

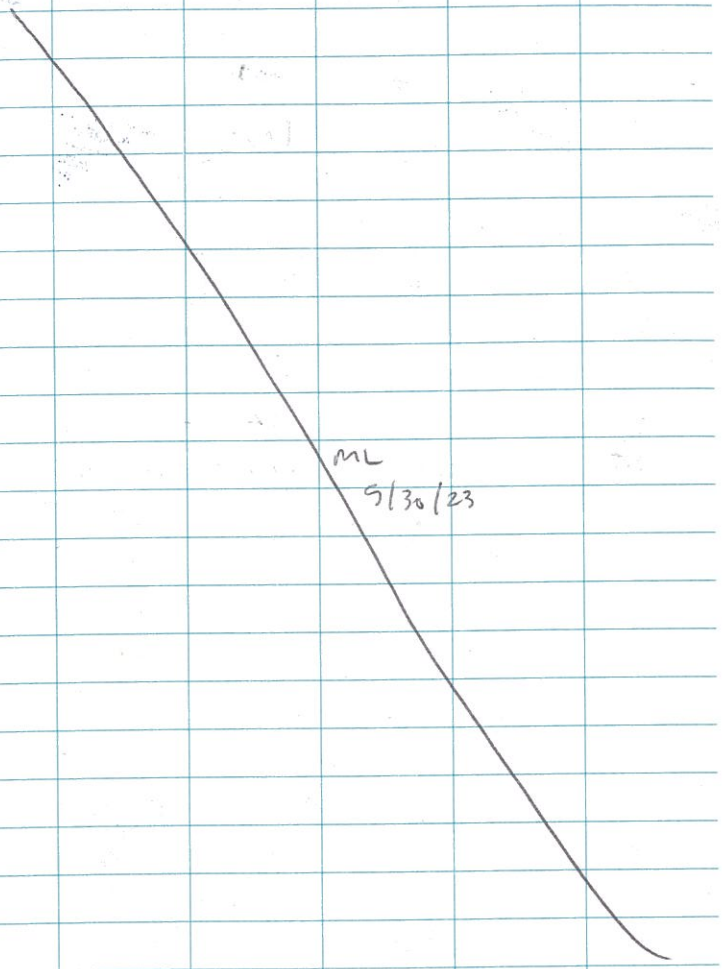
APPENDIX C

LOGBOOK

5/30/23 Clinton Engines

1000 Leave KC office for hotel in Davenport.

1630 Arrive at hotel in Davenport. No further work today.



5/31/23 Clinton engines

0715 Leave hotel for the site.

0815 Arrive on site.
MW-102
Depth: 63.5 ft

0842 collect sample MW-102

0908 Arrive at MW-3B
Depth: 21 ft

0918 collect sample MW-3B

0928 Arrive at MW-1B
Depth: 18.2 ft

0936 Collect sample MW-1B

0948 Arrive at MW-9
Depth: 14.85 ft

0954 collect sample MW-9

1002 Arrive at MW-10A and MW-10B
Depth: 12.3 ft - MW-10A

1008 collect sample MW-10A
Depth: 13.6 ft - MW-10B

1016 collect sample MW-10B

1016 collect sample MW-X

1042 Arrive at MW-14
Depth: 11.1 ft

1050 collect sample MW-14
Black substance present on cap of PD bag. Slight odor present.

5/31/23 Clinton Engines

1100	Arrive at MW-103
	Depth: 15.8 ft
1106	Collect sample MW-103
1115	Arrive at MW-104
	Depth: 17.35
1120	Collect sample MW-104
1134	Arrive at MW-13
	Depth: 8.4 ft
1140	Collect sample MW-13
1140	Collect sample MW-Y
	Arrive at MW-12
	Depth: 6.9 ft
1156	Collect Sample MW-12
1207	Arrive at MW-101
	Depth: 24.6 ft
1212	Collect Sample MW-101
1304	Arrive at MW-6B
	Depth: 22.2 ft
1312	collect sample MW-6B
	Black Substance present on PD bag
	cap. Slight oder present
1320	Arrive at MW-11B
	Depth: 14.3 ft
1332	collect sample MW-11B
1337	Arrive at MW-4B
	Depth: 13.5 ft

5/31/23 Clinton Engines

1342	collect sample MW-4B
1350	Arrive at MW-2B
	Depth: 16.3 ft
1354	collect sample MW-2B
1404	Arrive at MW-8B
	Depth: 14.3
1412	collect sample MW-8B
1415	Collect sample Field Blank
1420	Collect sample Trip Blank
1425	Leaving the site. Going to get ice for the sample cooler.
1430	Leaving for KC office.
2000	Return to KC office, put samples in fridge. No further work today

ML
5/31/22

6/1/23 Clinton Engines

0900 Return samples to iced cooler and notified Scott Farris at Pace Labs that the sample cooler is ready for pickup. No further work today, end of day. ML

RE: Project: CLINTON ENGINES
Pace Project No.: 60429976

Dear Kaitlyn Mitchell:

Enclosed are the analytical results for sample(s) received by the laboratory on June 01, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church
jamie.church@pacelabs.com

QUALIFIERS

Project: CLINTON ENGINES
Pace Project No.: 60429976

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 850288

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Submitting a sample via this chain of custody constitutes acknowledgment and acceptance of the Pace Terms and Conditions found at https://info.pacelabs.com/hubfs/pas-standard-terms.pdf.

DATA VERIFICATION REPORT

Prepared by: Ellen McEntee

Date: June 8, 2023

Site Name/Job Number: Clinton Engines / 103G65210190.009.03

Laboratory: Pace Analytical, Lenexa, KS

Data Package or SDG Number: 60429976

Sample Designations/Names:

MW-1B	MW-2B	MW-3B	MW-4B	MW-6B	MW-8B
MW-9	MW10A	MW10B	MW-11B	MW-12	MW-13
MW-14	MW-101	MW-102	MW-103	MW-104	MW-X
MW-Y	FIELD BLANK	TRIP BLANK			

Matrices: Water

Analytical Parameters: VOCs by SW-846 Method 8260

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Chain of custody	☑	☐	☐	The chain of custody was completed appropriately.
Data package completeness	☑	☐	☐	The data package contains all the required elements.
Sample preservation, storage, and holding times	☑	☐	☐	The samples were received on 06/01/2023; the samples arrived in good condition. All samples were analyzed within the recommended holding time.

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Method and field blank contamination	☑	☐	☐	The trip blank was non-detect for all target analytes. Acetone was detected in the field blank at a concentration less than the reporting limit. The results for acetone in samples MW-1B, MW-14, MW-103, MW-104, MW-13, MW-Y, MW-12, MW-101, MW-11B, and MW-4B are detected at greater than the RL but less than ten times the trip blank concentration and were qualified as estimated, with possible high bias (flagged J+). The results for acetone in samples MW-X, MW-2B, and MW-8B are less than the RL and were qualified non-detect (flagged U) at the RL. 1,2-Dichlorobenzene, 4-methyl-2-pentanone (MIBK), hexachloro-1,3-butadiene, and n-butylbenzene were detected in Method Blank 3368128 at concentrations less than the RL. The associated sample results are non-detect and were not qualified. 1,2,3-Trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 4-methyl-2-pentanone (MIBK), n-butylbenzene, and naphthalene were detected in Method Blank 3368720 at concentrations less than the RL, and hexachloro-1,3-butadiene was detected at a concentration greater than the RL. The associated sample results are non-detect; therefore, results were not qualified.
Surrogate spikes	☑	☐	☐	Surrogate spikes were within control limits.
Matrix spikes/matrix spike duplicates (MS/MSD)	☐	☐	☑	MS/MSDs were not analyzed with these samples.
Laboratory control samples/Laboratory control sample duplicates (LCS/LCSD)	☑	☐	☐	**LCS 3368129:** The LCS recoveries for 4-methyl-2-pentanone (MIBK), cis-1,3-dichloropropene, and styrene were above the laboratory acceptance limit. The associated sample results are non-detect and were not qualified. **LCS 3368721:** The LCS recoveries for 4-methyl-2-pentanone (MIBK), bromodichloromethane, cis-1,3-dichloropropene, dibromomethane, and styrene were above the laboratory acceptance limit. The associated sample results are non-detect and were not qualified. **LCS 3369451:** The LCS recovery for chloroethane was above the laboratory acceptance limit. The associated sample result is non-detect and was not qualified.

Data Package Element	Usable	Rejected	NA	Description of Affected Data (note specific samples and analytical parameters affected)
Other (Field Duplicates)	☑	☐	☐	**MW-10B/MW-X:** The relative percent differences for all analytes were within the acceptance limit. **MW-13/MW-Y:** The relative percent differences for all analytes were within the acceptance limit.
Summary Data are usable as qualified based on the findings for this validation effort.
